# The aftermath

## Investors see buys, lessons

October's market crash, although spectacular and painful, was a positive development, many institutional investors contend.

They view it as a timely, modestly expensive, but not fatal, warning, like a spinout on a slippery road: If the drivers heed the warning, a more serious crash can be avoided. Many investors have reacted to the warning, not by pulling onto the shoulder of the road and stopping, but by moving cautiously to resume normal activity.

This was reinforced Oct. 29, when institutional investors returned to the market in force, pushing the Dow Jones industrial average up 91.51 points.

Although the crash is estimated to have cost investors more than $500 billion, and pension funds about $200 billion, most investors saw positive aspects a week after the disaster:

- The White House and Congress are talking to each other about meaningful reductions in the budget deficit.
- The psychological impact of the crash may cause consumers to reduce their spending plans, and especially to stop living beyond their means by piling up increasing amounts of debt.
- Stock prices and price-earnings ratios are at what many regard as more realistic levels than they were at the beginning of October, presenting buying opportunities.
- Interest rates, which had risen sharply through the beginning of October, have fallen again as the Federal Reserve Board injected reserves to provide whatever liquidity the financial community needed.
- The decline in interest rates has provided corporations a financing window in which to renegotiate higher interest debt or replace planned but abandoned equity financing with debt financing.
- The crash is forcing exchanges, particularly the futures exchanges, to examine the impact of portfolio insurance and program trading, and to consider rules to limit such activities to dampen the extreme volatility the markets experienced.

### The causes

Two weeks after the crash, institutional investors were in general agreement as to why it occurred and what triggered it.

The causes were stock prices running far ahead of fundamentals leading to the common expectation of a correction; rising interest rates; concern over the federal budget and trade deficits; and a slump in foreign buying support for U.S. securities because of the declining dollar.

The triggers were Treasury Secretary James Baker III's verbal brush with the West German government; poorer-than-expected trade deficit figures; and a House Ways and

# Financing window still open

By Marcia Parker

Urged on by Wall Street's corporate finance gurus, chief financial officers and treasurers are scouting for — and finding — windows of opportunity to raise money despite the stock market's wild gyrations.

"There are financing opportunities," said James Crowley, co-head of investment banking, Prudential-Bache Capital Funding, New York. "You just have to find them."

The advice given by investment bankers to corporate clients is to carefully assess financing needs to year end and see if it makes sense to try any of the current financing options, especially medium-term financing.

"Look hard at your financing needs. Make sure you are prudently financed and your sources of capital are secure. And if you have an enormous reliance on floating-rate debt or financing you've been delaying, this is a good time to lock in financing," said Thomas K. McCaughey, managing director-capital markets services group, Salomon Brothers Inc., New York.

Ron Starkman, vice president-corporate finance, American Express Corp., New York, agrees opportunities exist, but "it's also hard to capitalize on them. You have to compress your decision making to a very tight time frame."

For corporate treasurers, the challenge of deciding whether to finance now or later depends on their outlook for the economy in general and interest rates in particular.

Interviews with corporate treasurers and finance executives found them evenly divided. Half, believing interest rates will rise again, are financing now while rates are depressed. The others, betting rates will fall further, are holding off on any financing.

At the moment, the financing windows are confined mainly to the U.S. public debt and the private placement markets, with little appetite among foreign investors.

Cash offerings in the equity market all but dried up since the unprecedented 508-point drop in the Dow Jones industrial average Oct. 19.

And the consensus on Wall Street is that equity offerings probably won't pick up before year end or perhaps early next year, assuming market confidence is restored.

"It's very hard to get equity deals priced and done," Mr. Crowley said. "It will come back, but it will take time."

Salomon Brothers is slightly more optimistic about a revival of the equity market than many of its counterparts. Salomon's latest credit market monitor said the upcoming equity calendar suggests renewed activity, though issuance is more likely to remain light until the market calms.

Mr. McCaughey said many Salomon customers have equity deals on the drawing board. "Stay tuned. We should be back in business in a few weeks," he added.

Although the equity markets are temporarily languishing, the debt market is thriving. Interest rates in the corporate bond market have fallen significantly, which has spurred a rash of high-quality companies to float new issues.

Companies are using the money for various purposes, including general corporate spending, to buy back stock, and to pay off more expensive debt.

The domestic corporate bond market benefited from the stock market's decline. Issuance for the week after the market collapsed totaled $3.7 billion, the highest volume in eight months, according to Salomon Brothers. Gross offerings were relatively strong across most sectors, with sales finance companies the most active. Sales finance companies include consumer finance firms, insurance companies and brokerages. Salomon expected $4 billion to $5 billion by the end of last week.

Investment bankers say issuance should remain strong in the weeks ahead as suppliers, who remained on the sidelines when interest rates rose in August and September, take advantage of the lower interest rate environment.

"This has resulted in a fresh look at financing on the debt side," Mr. McCaughey said.

Several options are available in the U.S. public debt market, especially to the strongest investment-grade companies, investment bankers say. Many of the debt financings done by companies since the market crashed consist of shorter-term maturities. Only a few issues stretch beyond 10 years.

## Buybacks cause for concern

By Brad Rudin

Announcements of stock buybacks totaling more than $15 billion helped stabilize the frenzied stock market, but could cause headaches for some companies in the future.

The proposed buybacks, only some of which have been carried out, bolstered confidence, market analysts agree, but have raised concerns about the wisdom of diverting cash from debt service payments and capital expenditures.

And to the extent that some companies borrowed to finance the repurchases, they may have added leverage to an already leveraged balance sheet.

# REITs miss market drop

By Nancy K. Webman

Real estate investment trusts escaped relatively unscathed from the gyrations that jolted the stock market.

REITs, on average, declined in value 11% between Oct. 1 and Oct. 23, compared with 24.9% for the Dow Jones industrial average and 22.9% for the Standard & Poor's 500 stock index, according to Chris Lucas, research director for the National Association of Real Estate Investment Trusts, Washington.

NAREIT's Share Price Index of 96 tax-qualified REITs trading on the three major exchanges also showed mortgage REITs fared best, losing 9.4% of their value. Hybrid REITs posted a 14.2% drop. Equity REITs dipped 10.8%.

Mr. Lucas couldn't explain why hybrid REITs suffered the most. But one real estate analyst, who asked not to be named, speculated most hybrids are health-care REITs,

# Catch-22 for realty

By Joanne Friedrick and Nancy K. Webman

The stock market's tumble caught real estate in a Catch-22: Institutional investors are more inclined to bet on real estate, but they'll have fewer dollars to ante up.

No doubt real estate, whose returns had been tarnished by abysmal appreciation in an overbuilt market, has taken on a new luster among pension investors looking for safer harbors and diversification for the assets they pocketed when they dumped their stocks.

But pension funds have a target allocation to real estate — a percentage of total assets — and a fund that lost money in the stock market now has fewer assets. As a result, the proportion of real estate assets in the portfolio could have risen to the target level, making it difficult for a fund to commit more to real estate.

American Telephone & Telegraph Co., New York, one of the biggest pension fund players in real estate, could face just such a dilemma.

Ronald R. Roessler, director-investment management at the $26 billion AT&T fund, said AT&T's $2.4 billion in real estate is comfortably within its target range of 10% to 15% of total assets. Yet he cautioned: "If the stock market were to continue to drop, we would find ourselves on the upper end of the range and, while we wouldn't sell anything, we might have to pull back."

Even smaller funds could see allocations exceed targets, and the funds will stop investing, said Brian K. Walters, vice president of CM Asset Advisors, the consulting subsidiary of Connecticut Mutual Life Insurance Co., Hartford.

Many funds, however, had been well below their targets, and pension executives and trustees were hesitant to choose a bearish real estate market over a bullish stock market. But that could change.

"If this is a market scare, clearly it will be good for real estate and will focus on the need to diversify," said Stanislaw Maliszewski, principal in the Chicago office of RREEF, a San Francisco-based real estate investment

# Cash Management

# Banking duties rank No. 1

By Barry B. Burr

Treasury executives responsible for cash management spend more time on float management and other non-lending banking relations, even though broader corporate finance activities are considered more important for promotion, according to a *Pensions & Investment Age* survey.

In the survey, executives ranked the amount of time they spend performing various treasury management functions and which of those functions leads to promotion.

The results show they spend less time in those functions considered most important for promotion.

The findings were compiled from 128 responses to questionnaires on corporate cash management practices and attitudes, mailed to 500 domestic cash and treasury management executives at 500 large corporations.

Among other results, the survey found:

- Corporate mergers and acquisitions have had little effect on cash management professional staffs at most companies.

In fact, of the responding companies affected by mergers and acquisitions, the survey found almost as many of the companies increasing professional staff as decreasing it.

- Financial troubles at banks caused nearly half of the responding companies to either drop or reduce the use of them for cash management services.

On treasury functions, the survey found more than 50% of the respondents ranked broader corporate finance activities as the most important treasury management function leading to promotion.

Yet they devote, on average, nearly 22% of their time in float management, selecting collection and disbursement banks and dealing with other non-lending banking relations.

Of the 11 cash management functions listed on the questionnaire, the respondents noted they spend nearly 20% of their time in broader corporate finance activities. Although it amounts to a plurality of their time on average, the results are skewed by a few respondents. Individually, more than half the respondents — nearly 55% — spend less than 20% of their time in broader corporate finance, most of them less than 10%.

In the survey, the executives indicate that, to get ahead, they have to spend more time in corporate financing activities.

Other areas of cash management covered by the survey include borrowing, investing, electronic funds transfer and the impact of mergers in the banking industry.

In addition, *P&I Age* surveyed the executives on matters relating to the National Corporate Cash Management Association. The concerns included the NCCMA's certification examination. (*See related story.*)

The survey also found:

- Little consensus exists on the use of benchmarks for measuring the performance of their corporate cash investment portfolios.
- Bank mergers have had little effect on cash management services provided to corporations, according to the survey.
- Most treasury executives are making no change in their strategy to boost investment returns.
- Further moves by companies are under way to pay charges for banking services in cash, known as fees, instead of by depositing compensating balances.
- Most corporate treasury departments play a leading or supportive part in developing electronic funds transfer programs to pay vendors. Of the respondents, 43% have a leading role; 34%, supportive; 10%, peripheral; 11%, hardly any; and 2%, none.

Of the respondents, one was vice president-corporate finance; eight, treasurers; 25, assistant treasurers; 21, cash managers; 11, managers of banking, or of banking, investment and finance; 17, managers of treasury operations or services; and, 11 managers, directors or supervisors of cash management or cash operations. Also included were director-finance, manager-planning and funding, or treasury analyst.

Cash management is tending to become more important at companies, the survey found.

A third of the respondents said cash management was viewed by their companies as more important this year than last; 5%, as less important; and 62%, about the same.

The amount of time the respondents spend in the treasury management functions listed in the questionnaire varied widely. After corporate finance, the category with the highest average percentage was "other," including dealing with other departments such as accounting, foreign exchange trading, cash flow forecasting, developing treasury systems and shareholder relations.

The survey found mergers and acquisitions since last year have had no effect on cash management professionals at 81% of the companies involved in the survey. At the 19% companies where it had an impact, slightly more than half of the respondents noted it resulted in a 41% decrease on average in cash management professionals.

But respondents at almost half of the affected companies noted mergers and acquisitions resulted in an increase of professional staff by an average 49%.

Financial trouble in the banking industry is causing cash management executives to review their banks' fiscal soundness more

## NCCMA's projects OK with executives

Although a number have some reservations, corporate treasury executives generally are pleased with the major projects of the National Corporate Cash Management Association in professional certification, account analysis and lobbying banking regulators, according to a *Pensions & Investment Age* survey.

The survey found little interest by corporate executives in asking their banks to use the new banking account analysis standard, developed by the NCCMA.

In addition, it found fewer people at fewer companies taking the NCCMA certified cash manager examination.

The findings were part of the survey taken from responses to questionnaires completed by corporate cash managers and other treasury executives on cash management practices and attitudes.

Some 25%, or 125 of the 500 executives at 500 large companies sent questionnaires, responded.

When asked how effective the NCCMA has been in lobbying regulatory authorities about corporate concerns, such as Federal Reserve Board officials on daylight overdrafts, 19% of the respondents believe the group has been very effective; 69%, somewhat effective; and 12% said it had no effect.

On the NCCMA certification exam, 58% of the respondents said their companies think the test is worthwhile, while 42% said their companies don't think it is worthwhile.

The survey found the number of people taking the NCCMA certified cash manager examination dropped this year from 1986, the first year it was offered.

The questionnaires asked how many people in each company took the exam and how many passed it. The survey didn't indicate if the respondents took the exam.

In 1986, 59 people at 40 companies took the exam; 48 peo-

# Market upsets rates' stability

By Fred Williams

Following Wall Street's recent crash, corporate treasurers expressed fears over short-term interest rate stability as they watched cash pour into short-term instruments and cause wild, intraday swings.

Millions of dollars were taken out of the stock market during the Oct. 19 508-point drop in the Dow Jones industrial average and were moved into government bonds, Treasury bills and money market instruments in a "flight to quality."

The increased money supply forced interest rates lower, resulting in dramatic day-to-day swings in these instruments' rates. The swings were most pronounced in 30-day and 90-day Treasury bills, commercial paper and agency issues of short maturity, all bought and sold daily by cash managers borrowing or investing surplus cash positions.

The gyrations in the short-term market made it all but impossible to get a grasp on the short end of the market. Treasury officers and investment specialists look for rates to stabilize in the next few weeks.

"Treasurers are least affected (by the market collapse) in the management of short-term liquidity." A treasurer "is affected only

*Continued on page 20*

# Banking . . .

*Continued from page 17*

systematically, the survey found. Of the respondents, 21% said they were reviewing their banks much more systematically; 52% said somewhat more; and 27% said there has been no change.

Along those lines, 37% of the respondents reported their companies either dropped services or reduced services at banks because of their financial troubles. Of those, 17% dropped services from troubled banks, 13% reduced services and 7% did both. In all, they dropped 165 services and reduced the use of 52 more.

The most frequently cited services dropped or reduced were lockbox, controlled disbursement, depository, borrowing, demand deposit accounts, cash concentration accounts and dividend payment accounts.

The survey found 32% of the respondents have or will hedge on average 30% of their borrowings, using futures, options or other protection.

The rest don't hedge their borrowings with protection instruments.

Few corporate treasury departments are satisfied with the benchmarks they use for measuring the performance of their corporate cash investment portfolios. In fact, 40% of the respondents said they don't have a benchmark.

Only 20% of the respondents are satisfied with their benchmarks; 34% said their benchmarks could be improved but aren't planning any changes; and 10% said they are planning to adopt better measures.

The most frequently used benchmarks are Treasury bills, cited by 10% of the respondents; commercial paper rate, 5%; the money market fund averages published by Donoghue Organization Inc., Holliston, Mass., 5%; federal fund rate, 5%; and other money market fund rates, 3%.

The survey found only 16% of the respondents employ or plan to employ by next year outside managers to invest corporate cash. On average, they use or plan to use about three or four managers each.

Few treasury executives use money brokers to invest in certificates of deposit or other instruments. Of them, 69% never use money brokers; 29% use them occasionally; 1% recently started; and 1% always use them.

Only 11% of the respondents offer or are planning to offer electronic direct deposit of corporate dividends to non-institutional shareholders.

Of the respondents not offering electronic dividend deposits, 36% said they never considered it; 24% said not enough shareholders are interested; 18% cited loss of float; 15% said it would be too costly; and 9% cited other reasons, mainly that their companies don't pay dividends. ■

*Carol Wiley, P&I Age directory coordinator, compiled the survey results.*

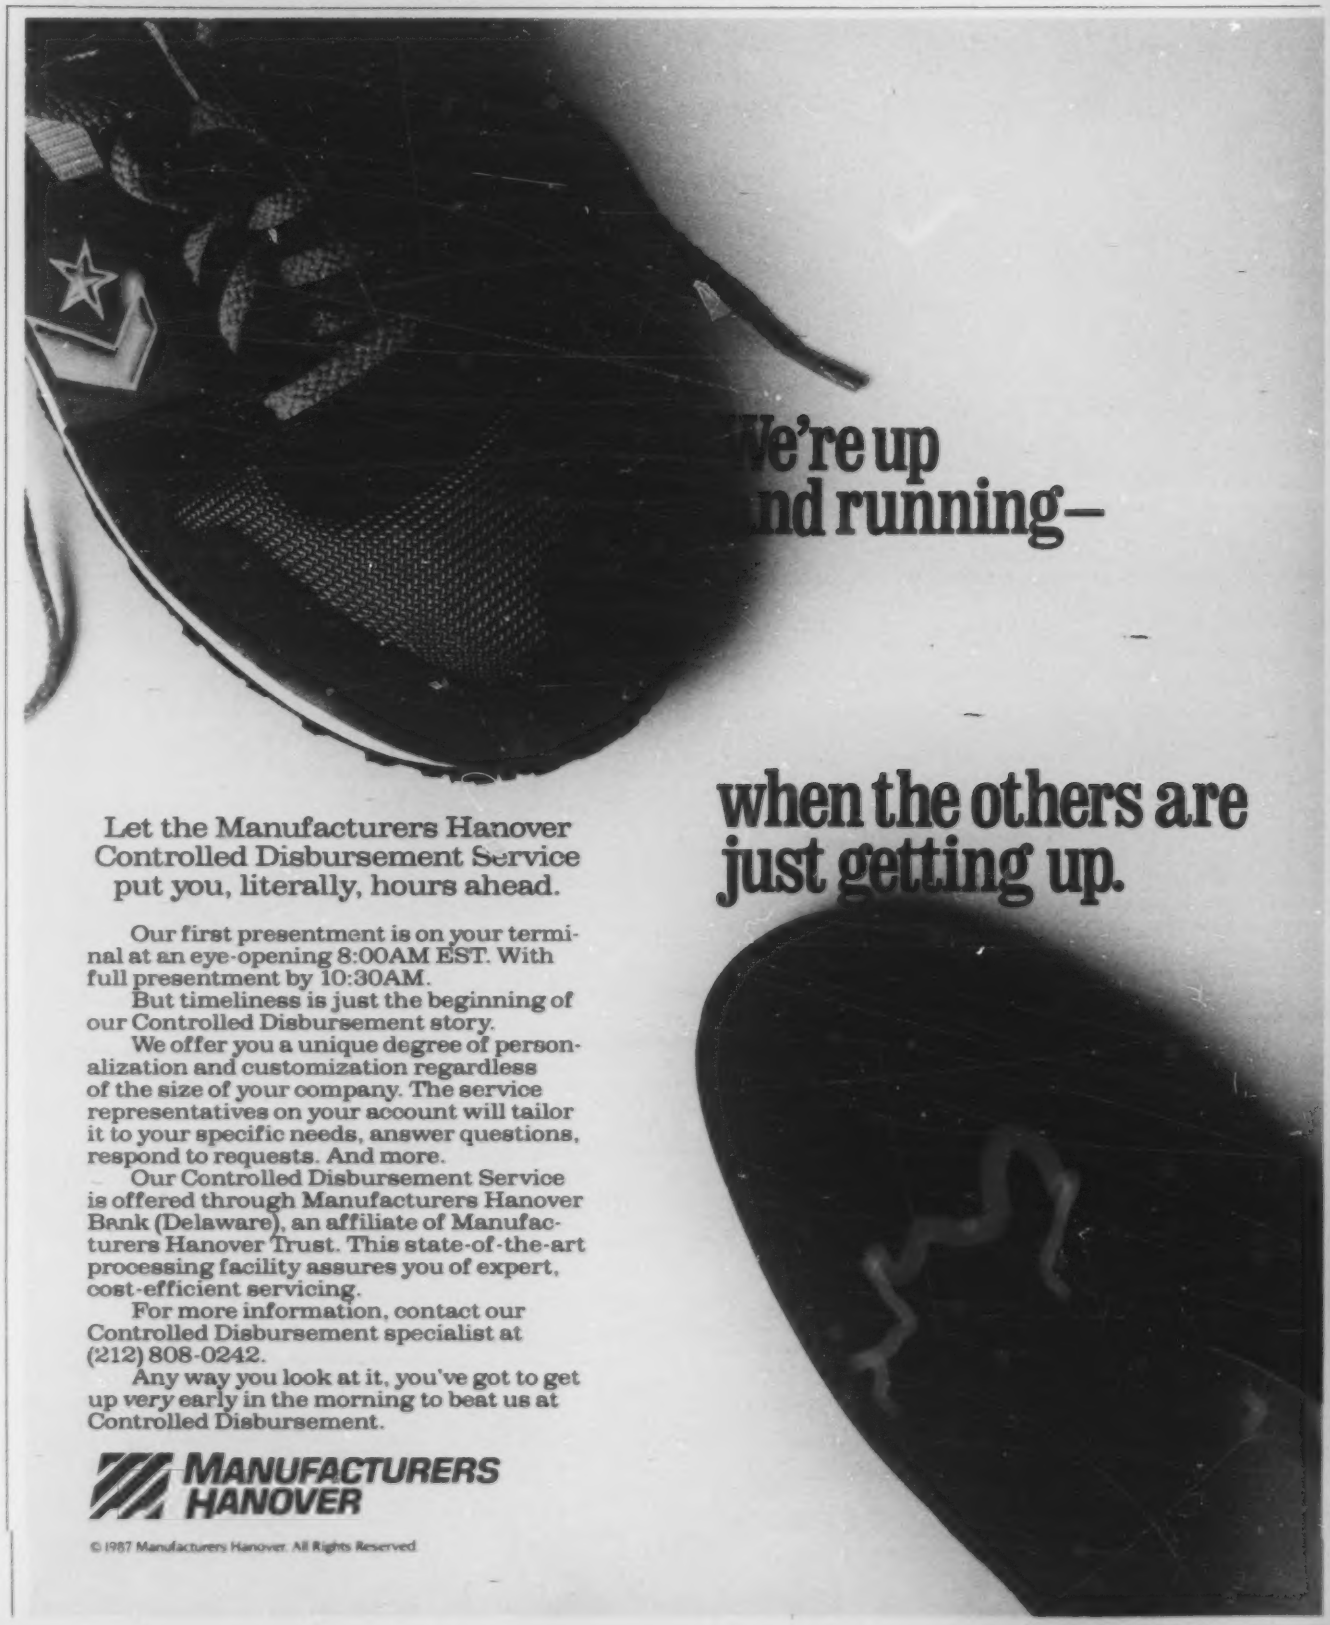
## *Midsize firm will get hit at tax time*

Midsize firms with annual sales between $1 million and $250 million will pay an average of 22% more in taxes in 1987 as a result of the Tax Reform Act of 1986, according to a study prepared by The CIT Group, an asset-based financing company in Livingston, N.J., and Peat Marwick, New York.

The CIT-Peat Marwick study showed heavy-construction contractors and real estate firms as well as businesses in agriculture, forestry and fishing face the greatest percentage increases in tax liabilities.

Tax cuts are expected in the securities and commodities services area while smaller increases are likely for chemical manufacturers and insurance agents/brokers. ■



Let the Manufacturers Hanover Controlled Disbursement Service put you, literally, hours ahead.

Our first presentment is on your terminal at an eye-opening 8:00AM EST. With full presentment by 10:30AM.

But timeliness is just the beginning of our Controlled Disbursement story.

We offer you a unique degree of personalization and customization regardless of the size of your company. The service representatives on your account will tailor it to your specific needs, answer questions, respond to requests. And more.

Our Controlled Disbursement Service is offered through Manufacturers Hanover Bank (Delaware), an affiliate of Manufacturers Hanover Trust. This state-of-the-art processing facility assures you of expert, cost-efficient servicing.

For more information, contact our Controlled Disbursement specialist at (212) 808-0242.

Any way you look at it, you've got to get up *very* early in the morning to beat us at Controlled Disbursement.

# Buybacks . . .

*Continued from page 2*

"The buybacks were something that contributed to a more positive tone," said Abby Joseph Cohen, investment policy analyst at Drexel Burnham Lambert Inc., New York. But there's no direct relationship between buybacks and individual companies' stock prices, she added.

More than 300 companies announced stock buyback plans after the market crashed Oct. 19. An announcement alone could prop up a company's stock price, while purchase of shares would result in lower dividend payments and higher earnings per share. Because a buyback has the potential to lift a company's stock price, the move is seen as an anti-takeover strategy.

Typically, statements announcing buyback plans have stressed the company's faith in its own stock. For example, when Procter & Gamble Co. announced it would repurchase up to 10 million of the company's 169,196,524 shares, Chairman John G. Smale said: "We are taking this action because the price of our stock in the past week has, at times, represented an excellent buying opportunity and we want to be prepared for such opportunities if and when they arise in the future."

Several market experts wondered about the number of shares that actually would be bought back after the announcements.

The announcements enable companies to perhaps enhance shareholder value without the cash outlays needed for dividends or acquisitions.

"What we don't know and can't quantify is how much was actually executed vs. just indicated," said Eric T. Miller, chief investment officer at Donaldson, Lufkin & Jenrette Securities Corp., New York.

Others raised concerns about companies that actually do carry out the buybacks.

"How come they're not raising dividends?" asked A. Marshall Acuff Jr., portfolio strategist at Smith Barney, Harris Upham & Co., New York. Dividends would have a greater impact on shareholder confidence than the buyback announcements, he said.

"They are looking for quick fixes," Mr. Acuff said. "Management says that Wall Street is short term but what we're seeing here is that managements by their actions are acting in the short term."

An Oct. 25 report by PaineWebber Inc. gave a more optimistic assessment. Repurchase announcements "went a long way to reversing Monday's collapse," the report said.

PaineWebber based its upbeat prediction on a comparison between the volume of stock that could be sold in portfolio insurance programs and the amount corporations could repurchase. Corporations have about $70 billion to spend on stock buybacks, while PaineWebber estimates $50 billion to $60 billion is in equity portfolios protected by portfolio insurance. Somewhat less than half of the shares in insured portfolios remain unsold, according to PaineWebber.

"It would seem that the buying potential of corporate America substantially exceeds the selling potential of portfolio insurance," the PaineWebber report said.

Money managers also are scrutinizing the list of more than 200 stock buybacks.

"We're looking for somebody who is enhancing shareholder value," said Orie L. Dudley Jr., chairman and chief executive officer of Fort Hill Investors Management Corp., a subsidiary of Merchants Capital Corp., Boston.

While offering a generally positive view of the recent spate of stock buybacks, Mr. Dudley said the announcements raise questions. "Is the management compromising financial position or growth and competitive position? That's the question we're asking ourselves."

The large number of companies that announced buybacks after the crash creates grounds for concern, said Kenneth S. Hackel, president of Systematic Financial Management Inc., Fort Lee, N.J.

"I would have thought they would have waited for the air to clear so they could determine what the fallout means for their business," he said. "Why would you want to spend cash now if you need it in the next couple of quarters?"

An economic downturn would drain the benefit expected from stock buybacks, Mr. Hackel said. "If, in fact, this turns into a very serious recession, many of these companies will have made a serious error in judgment." Even a mild recession would hurt leveraged companies that used internally generated cash or credit capacity to pay for a stock buyback, he said.

"Companies having financial flexibility are able to undertake capital projects which companies without such flexibility cannot," he said.

Buybacks make sense for companies with stable cash flows, strong balance sheets and solid operating histories, Mr. Hackel said.

The rating agencies, never enthusiastic about reductions in equity, offered a measured response to the wave of announcements.

Many companies are borrowing from banks and insurance companies to finance the stock repurchases. "Our program to make two- to three-year loans to companies for stock buybacks has been warmly welcomed," said James Crowley, co-head of investment banking, Prudential-Bache Capital Funding.

The Prudential affiliate is acting as agent in these transactions.

A statement from Moody's Investors Service Inc., New York, said the rating agency "does not expect wholesale rating reviews or downgradings" as a result of the buyback announcements made after the stock market crash.

"We're looking at each one to see whether it would have a material effect on capitalization," said Samuel Gordon, the director of industrial ratings at Moody's.

"I don't see wholesale changes, but there will be some rating impact," said Solomon Samson, a senior vice president at Standard & Poor's Corp., New York.

Concern about credit quality has not been an obstacle to companies interested in buyback programs, said Barry S. Friedberg, director of investment banking at Merrill Lynch Capital Markets, New York. "The advice we would give our clients is in the context of their financial policies relative to their objectives with credit ratings."

Standard & Poor's and Moody's have announced several credit reviews related to stock buyback announcements.

Both agencies placed American Medical International Inc. under review with negative implications after the leveraged company said it would buy $150 million of its own stock.

Moody's also announced a buyback-related review of National Distillers & Chemical Corp. and reported the focus of its existing review of Dayton Hudson Corp. has shifted to the company's buyback announcement.

Standard & Poor's placed MCA Inc., and two units of IC Industries Inc. on Credit Watch in moves that were related to announced stock buybacks. ■

Who offers your defined contribution plan participants the flexibility of daily telephone transfers between funds?

The same company who offers excellent investment management.

As a leading provider of 401(k) and other defined contribution plan services to more than 1,000 corporations across the country, Fidelity Investments offers a wide range of investment management and client services designed to meet the needs of both you and your employees.

**A Wide Array Of Nationally Known Funds.** With more than $70 billion in assets under management, Fidelity offers a broad choice of professionally managed mutual funds ranging from equity funds like Fidelity Magellan Fund and Fidelity Equity-Income Fund, to money market funds and GIC's. The funds are available on a *no-load* basis to plans with more than 200 eligible employees. And, as market conditions or personal investment objectives change, plan participants have the flexibility to transfer their investments among available mutual funds by telephone on any business day.

**Comprehensive Recordkeeping.** Fidelity's recordkeeping services are designed specifically to reduce your administrative burden.

Not only can your employees call us directly to transfer existing balances, they can also redirect future contributions by telephone. Our state of the art system and experienced employee benefit professionals work to ensure timely and accurate reports for both you and your employees.

**Employee Communications Support.** Fidelity will work with you to develop the communication materials needed to support your employees from enrollment through retirement. We'll help you explain your program and the available investment options clearly and effectively. In addition, your employees can call toll-free 24 hours a day, seven days a week and talk with a knowledgeable Fidelity representative about available investment options.

For more information about Fidelity's defined contribution plan services, including fund prospectuses covering management fees, expenses, and applicable sales charges, please call Jeffrey Paster, Corporate Market Manager, at 1-800-345-5033. In Massachusetts call collect 617-570-5692.

# Catch-22 . . .

*Continued from page 2*

management firm.

In fact, said William Ramseyer, president of Pension Realty Advisors, San Francisco, the stock market's plunge is good for overall real estate investing. "This will persuade pension strategists to increase the real estate allocations. Our feeling is this is the time to be diversified," he said.

Some pension executives must be thinking the same thing: Real estate managers and consultants report the number of feelers from prospective clients increased around the time the stock market began its gyrations leading to its historic 508-point drop.

AT&T's Mr. Roessler said increased inflation and volatility in the financial markets enhance real estate's appeal. "We might be approaching an opportunity going forward, depending on how this thing shakes out," he said. "We always try to be an opportunistic investor in real estate."

Fiduciaries will put more money into less volatile asset classes, regardless of their target allocations to those classes, said Bruce Ludwig, senior managing partner at TCW Realty Advisors, Los Angeles. He said some pension funds, especially public ones, likely will increase their commitments, because they have been funding their investments with cash flow, not by selling off other assets.

James A. Perry, executive director of the Pennsylvania Public School Employees' Retirement System, Harrisburg, which has $1 billion of its $12.4 billion pension fund in real estate investments, said his fund isn't up to its target allocation of 10%. "We do have money available if we found the right deal."

"The thing with real estate is you have to buy it right," Mr. Perry said. "We're not going to go out and buy a whole bunch of real estate just because the stock market went down."

It's also possible there will be fewer "right" deals: Under a market-induced recession scenario, vacancy rates would rise even higher, making real estate less attractive to pension investors that purchase fully leased properties *(see related story on this page)*.

James Richmond Jr., president of Aetna Realty Investors Inc., Hartford, Conn., theorizes cash from liquidation of stocks will go into real estate and could, eventually, cause real estate funds to become oversubscribed.

"I just hope managers don't take in too much more than they are prepared to invest. This could put the real estate market in an imbalance," Mr. Richmond said.

Louis Kingsland, senior vice president of Callan Associates, San Francisco, agrees with Mr. Richmond's theory. He fears an infusion of more capital could lead to overpricing, as more investors bid for the narrowing pool of real estate.

The type of real estate that will be attractive to investors, experts noted, is higher-quality property with predictable and stable returns. More speculative investments, such as pre-development land, could fall by the wayside.

"There's been an erosion of investor confidence that's going to cause people to be more cautious," said Kenneth A. Campia, president of LaSalle Advisors Ltd., Chicago.

Despite all the theorizing, at least one pension executive doesn't expect any significant changes in the real estate investing habits of pension funds.

"I'd be surprised if there were any sudden move in either direction," said W. Allen Harrison, assistant treasurer of Exxon Corp., New York, whose $4 billion fund has $400 million in real estate. ■

*Real estate writers Steve Hemmerick, John Covaleski and Chuck Paustian also contributed to this story.*

# Realty outlook poor

**With the stock market plunge coming at a time when the real estate market already is soft, fears of a market-induced recession prompt predictions of even higher vacancy rates, lower absorption and curtailed development.**

**Raymond Torto, economic consultant for Coldwell Banker/ Torto, Wheaton in Boston, said a recession would cause a significant drop in absorption during 1988 as well as continued reduction in construction.**

**"The net result is supply and demand fall, and there is a slight increase in vacancy, but nothing we call a significant change," he said.**

**He said vacancy rates, which now are about 19% based on a weighted average for the 30 top markets, would go to 20% in 1988 and would peak in 1989 before heading down.**

**Lawrence S. Bacow, director of research at the Massachusetts Institute of Technology — Center for Real Estate Development, Cambridge, Mass., said the "wealth effect" — how wealthy people feel and their subsequent spending habits — foretells a recession, and "people and institutions will put spending on the shelf."**

**If there is a recession, said James Snyder, president of Kennedy Associates Real Estate Counsel Inc., Seattle, there will be less need for office space and that will only worsen vacancy conditions.**

**Specifically, the financial services companies will shrink and that will translate to reduced space needs.**

**Finance-related companies in New York City leased 27% of the available office space in the first half of 1987, said Anthony J. LoPinto, senior vice president and director of financial services at Cushman & Wakefield Inc., New York. In addition, he said, reduced space needs will have a domino effect, halting development and hurting the leasing of completed projects.**

**Not everything connected with a recession would be negative for real estate.**

**David R. Hodes, senior vice president of Richard Ellis Inc., New York, said a recession could create buying opportunities. Pension funds, he noted, would be one of the few investor groups to take advantage of them.**

**Also favorable is the effect on financing, said Mr. Torto. Lower interest rates, which accompany a recession, would help people who are holding buildings. Financial institutions also would benefit, he said, because rates on loans they made during high-interest periods would be going down.**

**Among the property types affected by recession are industrial real estate, distribution warehouses and retail properties.**

# *Japanese buyers may pause*

**By Joanne Friedrick**

Japanese investors likely will continue to be major players in U.S. real estate, but might proceed more cautiously following the fall of the stock markets in the United States and Japan.

"I think the Japanese will pause. They have been financing (the purchase of U.S. property) through corporate borrowing, so the corporate net worth is impaired," said Lawrence S. Bacow, director of research at the Massachusetts Institute of Technology — Center for Real Estate Development, Cambridge.

The Japanese have been borrowing on floating rates, so even though interest rates are falling, volatility is going up, Mr. Bacow added.

"Further devaluation (of the dollar) will cause them to slow down their acquisition."

David R. Hodes, senior vice president at Richard Ellis Inc., New York, agreed a sharp drop in the dollar would cause the Japanese to exercise more caution because interest rates would effectively be lower.

So far, though, his firm hasn't experienced a decline in interest by Japanese investors.

Louis Kingsland, senior vice president at Callan Associates, San Francisco, is more pessimistic. He said the Japanese could pull out of the U.S. real estate market because of instability in the stock markets, providing some buying opportunities for U.S. institutions.

Prices of U.S. properties wouldn't drop, though, because there's already too much competition for quality real estate investments, said William Ramseyer, president of Pension Realty Advisors, San Francisco.

Although he has not seen a letup in the Japanese appetite for U.S. real estate, Mr. Ramseyer conceded concern about the financial markets might cause the Japanese to "rethink" their commitments.

James Snyder, president of Kennedy Associates Real Estate Counsel Inc., Seattle, predicted if the Japanese market is hit hard and there is no improvement in the U.S. market, the Japanese will buy less real estate here.

"I don't see (a pullout) happening," commented Paul Saylor, principal at Institutional Property Consultants, Atlanta.

Indeed, hard assets such as U.S. real estate will continue to be attractive, although the Japanese have suffered the same shaken confidence as U.S. investors, said Anthony S. LoPinto, senior vice president and director of financial services at Cushman & Wakefield Inc., New York.

"Those in the stock and bond markets here have been hammered," Mr. LoPinto said, "but not all are heavy players in the stock and bond markets, and they have capital available for investment."

The Japanese "can elect to invest in real estate rather than equities because liquidity isn't a big factor for them," said H. Lee Goodwin, senior vice president of The Horne Co., Houston.

"The excess capital is so great that they have to put money here in some form or fashion," Mr. Goodwin said. ■

# REITS . . .

*Continued from page 2*

"which went down more" than other REITs, such as those that contain mainly retail properties.

Yet L&N Housing Corp., a participating mortgage REIT that its sponsor labels a hybrid, began the month at 16⅞ and closed at 19⅛ Oct. 23.

Carey B. Wickland, president of L&N Management Inc., Dallas, the Lomas & Nettleton subsidiary that sponsors L&N Housing, wasn't surprised by the stock's movement. He said investors could have been responding to L&N's Oct. 12 announcement that earnings and dividends rose during the third quarter.

Mr. Lucas' calculations, done at the request of *Pensions & Investment Age*, lend credibility to REIT sponsors' long-held claim that their stocks are less volatile than the market as a whole. In fact, said Mr. Lucas and others, REITs should be looked upon as a defensive play and would be a good investment vehicle to turn to in the aftermath of the market tumble.

Stan Ross, co-managing partner of Kenneth Leventhal & Co., Los Angeles, said REIT yields make them a good investment. "The smarter money looks at it (REITs) as a real estate play," he added.

Of course, there's a flip side: REITs didn't fully participate in the bull market that characterized the first nine months of 1987.

Nevertheless, REITs performed as expected, said Thomas B. Swartz, chairman of The Sierra Capital Cos., San Francisco. "Most people who buy REIT shares don't buy them to trade them. (REITs) are just slower moving; leases don't turn over every minute," said Mr. Swartz, who saw one of Sierra's REITs gain a quarter of a point the day the market fell 508 points. ■

# Management approaches: What Bloom off portfolio insurance

By Trudy Ring

Portfolio insurance worked — but not always as advertised.

In many cases, it did not provide the level of protection promised. And many of the vendors had to sell the underlying securities to get some protection when they couldn't sell futures because of a shortage of buyers.

Some clients are satisfied with how it worked; others are unsatisfied; and some aren't saying.

Portfolio insurance, also called dynamic hedging, is a computer-driven method of reducing a portfolio's exposure to stocks systematically as the market declines. Initially it involved selling the stocks and moving to cash.

As most recently marketed, however, it involved the sale of stock index futures in response to declines in portfolio value to protect the portfolio from further declines and assure a minimum return. The sale of futures creates a synthetic put option on the portfolio.

Dynamic hedging also can be done with bond futures to protect a bond portfolio.

Difficulties in stock index futures trading during the market's plummet Oct. 19 and the temporary shutdown of trading the following day led to speculation that portfolio insurance failed to insure, at least at the levels promised.

The consensus appears to be that dynamic hedging programs are missing their minimum rate of return targets slightly. One money manager said some insured portfolios now likely are one to four percentage points below where they should be to meet those targets when the programs wind down. The target rate of return and time horizon vary widely among programs.

Still, some pension executives and money managers said dynamic hedging worked satisfactorily. Others, including some who had been among its most vocal boosters previously, declined to discuss how it functioned. That list includes officials of Manville Corp., Denver; Bechtel Power Corp., San Francisco; Southern California Rapid Transit District, Los Angeles; and Leland O'Brien Rubinstein Associates Inc., Los Angeles, a pioneer in the area.

One of the satisfied customers is Allen W. Anning, director-retirement plan administration at Detroit Edison Co. The utility has $500 million of its $744 million pension fund hedged with portfolio insurance by J.P. Morgan Investment Management Inc., New York. The $500 million is all equities and represents all but about $112 million of the fund's equity allocation.

"Initially, it looks like it worked extremely well," Mr. Anning said.

The fund has three portfolio insurance programs, all aiming for no loss over various time periods. The programs may not quite meet that target, but it appears they will come close enough to be satisfactory, he said.

Detroit Edison has used portfolio insurance since February 1986. As the value of the insured portfolios grew through market gains, the fund reset the insurance programs to assure the current value of the securities, he said. Such resetting, called ratcheting, has proven critical to programs' success, he said.

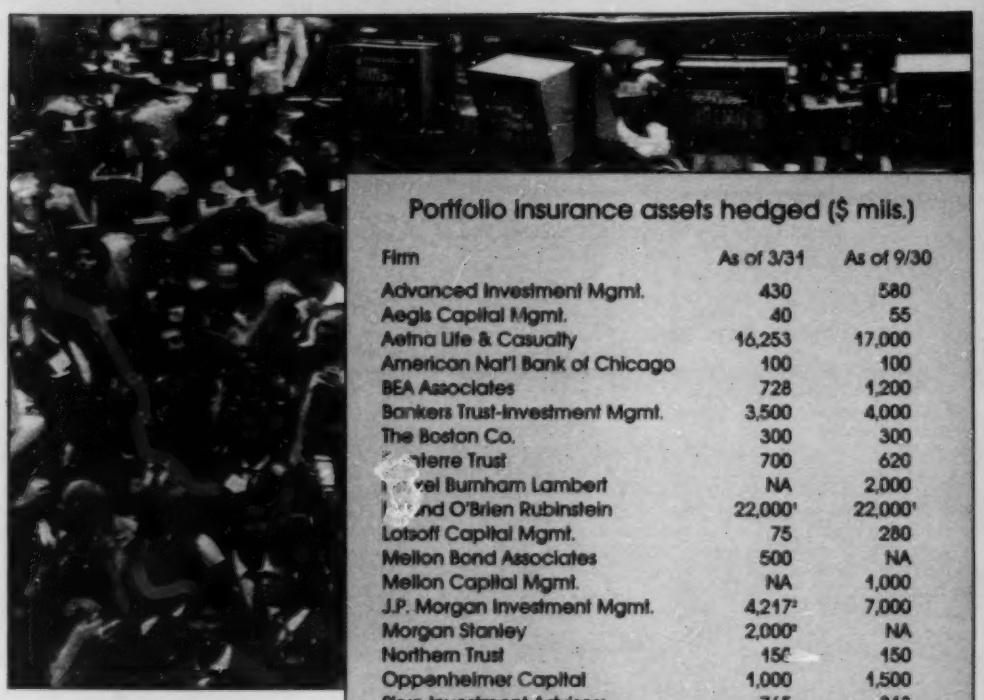
At Bayer USA Inc., Pittsburgh, the $550 million pension fund started a portfolio insurance program on $31 million in indexed stocks early in October.

"I believe it worked pretty well," said Jeff Benninger, manager-trust investments. "Those (managers) I've talked to indicated they were able to trade."

Mellon Capital Management Corp., San Francisco, runs the insurance program as well as the stock index fund. The insurance program aims for no more than a 5% loss over three years.

Some managers said, with some reservations, the strategy worked.

"It depends on who was implementing it," said Frederick L.A. Grauer, chairman of Wells Fargo Investment Advisors, San Francisco. Some managers decided it was too expensive to sell stock index futures at deep discounts Oct. 19, so they didn't trade; Wells Fargo did trade, both in the futures and, in the accounts where it had the authority, in the cash markets.



*Difficulties in stock index futures trading at the Chicago Mercantile Exchange and other futures exchanges led to speculation that portfolio insurance failed to insure, at least at the levels promised.*

[1] *Pensions & Investment Age* estimate
[2] As of Jan. 1

Because of the gaps between stock and futures prices that day, some of Wells Fargo's accounts fell below their minimum rates of return, but they made that up in the following days, Mr. Grauer said. "Our accounts are, for all intents and purposes, where they should be," he said. "There was significant delivery on the promises of portfolio insurance."

"I think it still does what it says," Jim Carder, president of Westridge Capital Management, Los Angeles, said of dynamic hedging. The deep discounts at which Standard & Poor's 500 stock index futures were selling during the market's drop and the extreme volatility of the market made portfolio insurance more costly than anticipated, but these factors don't invalidate the concept, he said.

"Futures were a very difficult market to move in," said Tom Allen, president of Advanced Investment Management Inc., Pittsburgh. For some accounts in which Advanced manages both the underlying securities and does the dynamic hedging, it sold the securities rather than shorting futures.

Webster Capital Management, New York, was able to do this in all its accounts, said Jon Jankus, director of investments. "Having the flexibility to move both in the cash and the derivative markets — thank God," he said. "I'm sure

*Continued on page 51*

# Drop may take steam out of indexing

The dramatic slip in the U.S. stock markets may slow the flood of pension assets into index funds, some financial experts predict.

Index funds, designed to match the performance of major indexes and avoid the high costs of active equity management, "obviously took a big hit," said Sam DeKinder, executive vice president at DeMarche Associates, Kansas City, Mo. From Oct. 1 to 23, the Standard & Poor's 500 stock index declined 22.9%, according to DeMarche, while the Dow Jones industrial average dipped by 24.9%. Through Oct. 26, they dropped 29.3% and 30.9% respectively.

"I think you may now start to see a shift toward a more conservative posture. Unfortunately, many plan sponsors will start to rethink their investment policies under crisis conditions, not a terribly great time to be making these types of decisions," he said.

"Indexing will slow because basically sponsors had been making an asset allocation decision toward equities with indexing and were saying active equity managers could not outperform the index. . . . The index funds took whatever hit the index took because they are fully invested and there is no cash there."

Noel Feldman, investment consultant with Hewitt Associates, Santa Ana, Calif., agreed indexing may fall on hard times.

"We've been saying for some time that people have been viewing index funds almost as a conservative way to invest in the equity market. You are assuming, though, the full market risk by using index funds without any investment manager to do anything at all to soften the blow," he noted. "Virtually all active managers will outperform the market in this type of decline to some degree. This will drive home the point that index funds are not the comfortable, conservative investments many had believed."

David Bostian, president of Bostian Research Associates, New York, said the decline of indexing will lead to enhanced awareness of market-timing and asset allocation disciplines.

"The S&P has taken such a vicious smash that people will realize that timing and asset allocation have some real value, and my guess is that people will blow out of indexes into cash for the time being. The momentum toward indexing has stalled," said Mr. Bostian.

Frederick L.A. Grauer, president of Wells Fargo Investment Advisors, San Francisco, which oversees the largest pool of indexed assets, disputes the notion there will be a shift away from indexing.

"I think the future remains very bright," he said. Mr. Grauer said the S&P remains in the top performance quartile in most performance surveys over three to five years and "it remains the case that most active managers are having trouble beating the benchmarks."

Wells Fargo had total S&P indexed assets of $33 billion as of Sept. 30.

Most of the indexed assets were unhedged, he said, and moved with the market. Wells does offer its clients the option of having portfolio insurance, and has about $9 billion protected by the strategy. He said he expects more clients to elect to have portfolio insurance on their indexed accounts.

Mr. Grauer said the trend by pension funds toward indexing should continue once the market settles.

"First, the performance game is still much disposed to market benchmarks and second, the secular argument today is widely accepted and more pension funds are using index funds as part of their structural part of the architecture of the plan as a way of achieving more controlled results at a very low cost. The secular argument remains intact," he said.

"Also, in the past 10 months equity market performance has been strong and has taken many plans up to their maximum commitment to equities. As a consequence, there has been a drawdown on indexed assets because it was the cheapest way to adjust the asset mix back to normal.

"With the drop in equity values, that's no longer a problem. I suspect a number of sponsors now will have less equity exposure than they need and I look for a flow toward indexing," said Mr. Grauer.

Luke Mazur, chief investment officer for Northern Trust Co./Strategic Investment Services, Chicago, which manages a $4.3 billion equity index fund, said he expects the interest to remain in indexed products.

Northern's indexed assets are not hedged and declined "in line with the market," he said. He added no adjustments were made in the fund and "at some point the market will test the lows. Then it will be up to clients as to how they reallocate their assets." ■

# worked, what didn't

# Timers call market right

*Continued from page 50*

there were a great many portfolio insurers who needed to trade (futures) and couldn't."

Webster moved its portfolio insurance accounts fully into cash Oct. 16, one trading day before the 508-point plunge.

On that Monday, Oppenheimer Capital Corp., New York, suggested its portfolio insurance clients buy futures after having sold them short previously, therefore closing out futures positions, said Gene Brody, director of options management. Oppenheimer didn't try to sell any futures Oct. 19, he said.

Bankers Trust Co. — Investment Management Group, New York, met its hedging targets in 10 of its 12 portfolio insurance accounts, in which it also managed the underlying securities and sold them rather than use futures, said Dean D'Onofrio, vice president and manager-quantitative investments. In the others, the manager had to sell discounted futures or do nothing.

"It's no secret that the stock index futures, because of too many sell orders and not enough buy orders, haven't been trading at their fair value," Mr. D'Onofrio said. "Portfolio insurance is still attainable, but it is attainable only if you can trade in the underlying securities."

Insured accounts didn't go down as much as the market, said Pete Thomas, vice president of Skye Investment Advisors Inc., Cupertino, Calif. The Equity Guard Stock Fund Inc., a mutual fund for which First Republic-Bank Dallas manages equities and Skye provides dynamic hedging, was down 7.2% for the period July 1 through Oct. 22, while the S&P 500 was down 18.3% for that period, he said. The fund aims for no loss over a year and will come close to that, Mr. Thomas said.

However, coming close to meeting a goal doesn't satisfy some investors, and some managers are rethinking their dynamic hedging methods. "You just have to accept the fact there are certain conditions (in which) you just don't function," Oppenheimer's Mr. Brody said.

The Boston Co., Boston, had some difficulty in trading futures and had to sell them at discounts, said Richard A. Crowell, managing director, structured investment products group.

But while providing some protection, the trades didn't provide what was promised. For instance, Mr. Crowell said, one of his clients aimed for a minimum loss of 5%; the account probably will be down 8% or 9% at the end of its time horizon, although it likely will be ahead of the market.

Aetna Life & Casualty Co., Hartford, Conn., is moving its dynamic hedging clients into different types of programs, said Ralph Tate, vice president. Some will involve changing the parameters of futures-based hedging programs, and some will be moving away from futures-based programs to those implemented in the cash markets, Mr. Tate said.

Portfolio insurance's harshest critic contends the stock market's slide proved him correct. "People are going to see it doesn't work and it's going to die a natural death," said Richard Brignoli, president of Brignoli Models Inc., New York.

Mr. Brignoli and his partner, William M. Morris, also said portfolio insurance exaggerated the market's decline. Mr. Brignoli added dynamic hedging programs add to the market's volatility because they create demand when there's already demand and supply when there's supply. ■

The best-performing investment managers emerging from the rubble of the stock market tumble likely will be asset allocators that employ a form of market-timing discipline, and the market timers themselves

Noel Feldman, investment management consultant with Hewitt Associates, Santa Ana, Calif., said the best-performing investment managers were primarily three-class allocators that switch among equities, cash or bonds, and happened to be in bonds before the market dropped.

"I'm not sure the (pension) plan sponsors have fully discovered these guys yet. It looks like now they have proven their merit," said Mr. Feldman.

Renaissance Investment Management Inc., Cincinnati, with $1.25 billion under management, is a three-class allocator that began shifting out of stocks as early as February and into intermediate-term bonds. It liquidated its remaining stocks in May and bought bonds.

"We are active asset allocators; it is similar to market timing but our style is fundamentals driven," said Frank Terrizzi, chief investment officer at Renaissance.

"It is an emotion-free system based on historical data, prices, earnings, dividends and yields. If returns on stocks and bonds are equal, we split between them. If the returns are 10% greater in one, we shift to that category."

"In February, our asset allocation model indicated bond returns were equal to stocks, and we were 50-50. In May, the returns on bonds became 10% greater than stocks and triggered a 100% move to Treasuries.

"We took a lot of heat from our clients who saw the market going up. The last six weeks for us have been the most trying time since we've been in business. Some clients defected, but this market has been a vindication of our methodology," said Mr. Terrizzi.

Renaissance had a first-quarter return of 18.9% followed by −5% and −5.3% in the second and third quarters; for the year to date through Oct. 23 the firm was up 11% to 12%, said Mr. Terrizzi.

Avatar Associates, New York, an equity and strategic asset allocation manager, expects to benefit from the market shakeout, said Bruce Poliquin, vice president.

He said Avatar had been bullish on the market through early September, when it moved away from its 85% invested position and raised cash to 55%.

The decision was the result of the Federal Reserve Board's credit tightening, foreign investors not pumping new money into the market, liquidity drying up and expected interest rates hikes.

Just before the drop, he said, client confidence in Avatar's approach was manifested in an increase in assets under management. Within the past month, he said, four pension funds — K mart Corp., Troy, Mich.; Boston City Retirement System; Kroger Co., Cincinnati; and Browning-Ferris Industries, Houston — either hired Avatar or increased existing accounts with the firm.

Shifts away from the equity market were not restricted to asset allocators.

John M. Cunningham Inc., Wayne, Pa., a value-style manager with assets of $16 million, shifted to a 95% cash position this summer, said John M. Cunningham, chief investment officer. "It was plain and simple the valuation on the market and my issues indicated there was not enough upside and considerable downside risk in the market."

Mr. Cunningham said clients have called, not to complain, but because "a lot of people are caught in the mystique of what's happening in the market. Even though I've told them we are in cash, they are still calling just to check and make sure."

Another value manager, Mark Raclin, executive vice president with Lowry, Raclin, Harrell & Howerdd, Chicago, said the firm has done "significantly better than the market in equities and has beaten the S&P by a couple of hundred basis points."

"It is our feeling that the market has gone from the place where it was a very poor value to a place where it is still a little above average value, by some measurements. A month ago we thought it was a poor value."

"Some clients defected, but this market has been a vindication of our methodology."

**Frank Terrizzi**
**Renaissance Investment Mgmt.**

Mr. Raclin said the firm was "probably only about 30% invested Oct. 14," and was "at or near a minimum equity position from midsummer or earlier. We missed the last 100 points on the Dow on the upside because we felt there was no way of knowing how high the market would go."

Mr. Raclin said there has been "too much second guessing and tea-leaf reading" in the aftermath of the market drop. There are "basic financial and economic reasons underlying the market actions," he said, "and when it gets too high it goes down, then when it gets too low it goes up. Decisions need to be made before that happens, not after."

For months before the start of the October market drop, Wall Street analysts and financial specialists had been warning the market was overvalued, overextended and overbought and were advising investors to prepare for a pullback.

"This decline shouldn't have been a surprise to anyone who analyzed the market," said Edwin Fiske Thrall, chief investment officer at Fiske Capital Management, Wellesley Hills, Mass. Fiske moved out of the equity market into cash in March and April, he said, "because the market was so obviously vulnerable."

Fiske Capital also applies a cyclical asset allocation strategy to investing in the equity market, moving between stocks and cash.

"We base capital in the money markets and only go into equities when they are moving upward and the risk factors are reasonable . . . Throughout most of this year, this has been a market driven by emotion. It came unraveled very quickly, and we felt we should stand aside," said Mr. Thrall.

Fiske has nine levels of aggressiveness, he said; the middle one falls between returns on the S&P and money markets.

"We move in stages, normally we move into the market gradually and move out quickly," he said. "The approach provides investors with the advantages of being in the market without most of the risk."

Three weeks before the market slip, Dana Investment Advisors, Brookfield, Wis., which employs market-timing techniques, shifted to 90% cash in equity accounts.

"A lot of it was basic common sense. The market was overvalued. There were a lot more stocks declining than advancing. We decided to take our profits and run," said Jim Ivey, chief strategist at Dana. "We had the gains we wanted. We did take some heat for a while. We aren't geniuses; we took our profits and got out." ■

*Editors note:* The stories on market timing, quantitative and index managers were reported and written by Fred Williams.

*Pictured from left: Theodore Aronson of Aronson & Fogler; Daniel Schweihs of Disciplined Investment Advisors; and Dean LeBaron of Batterymarch Financial Management.*

# Quant managers take hit in stride

Computer-driven quantitative equity managers, fully invested because of their methodology, felt the brunt of the October stock market drop.

The computerized stock selection and investing process is designed to keep portfolios committed to the market. But quant managers have seen no significant pullback by clients concerned the process may not have worked.

"We have given back the gains we experienced earlier this year," said Theodore Aronson, partner at Aronson & Fogler, Philadelphia, with about $175 million under management.

Quantitative managers claim the investment style functioned as it was designed to do, but they were caught in a market in which everyone was cut by the same broad sword.

Mr. Aronson said quants are characterized by "the lack of emotion. Our computers don't know the market is down by 508 points. It is unemotional and ruthless in doing its job and allows you to ply your trade in an unemotional, disciplined fashion.

"I think you will see quant managers come out of this better than other managers because of the unemotional approach. In violent, volatile times like these, discipline has obvious payoffs. It keeps you from following the crowd."

Mr. Aronson said he remains fully invested and through Oct. 26 equity performance at Aronson & Fogler had declined almost in line with the Dow Jones industrial averages. The Dow was down about 30% as of that date while his portfolios were down 28%, he said.

Daniel J. Schweihs, principal of Disciplined Investment Advisors, Evanston, Ill., acknowledged being down in line with the market, but he expects the disciplined style to be vindicated by market conditions over the longer term.

"If you bought the market in 1982 at 860 on the Dow and the intraday low was 770, you don't look bad five years later because you missed the low. If you have a long investment horizon, the same holds true today," he said.

"If you bought at 10% above the bottom it was still a good long-term investment. In 15 years, this will be an interesting event in history," said Mr. Schweihs.

Perhaps the best-known computerized stock selection process is applied at Batterymarch Financial Management, Boston, with $10 billion under management.

Dean LeBaron, president and chief investment officer, said the firm's quant investment process didn't outperform the market.

"Our (program) is designed to keep us fully invested and almost everything went down equally in this market," he said.

"Our quant screens are designed to compare relative valuations around the globe and how corporations value themselves."

He said the Batterymarch process is designed to "implement rather than think" and said he remains committed to the process.

"I'd guess there was a 10% chance of a financial accident before (the market drop), considering the velocity of money in the system and other factors. That has gone up now to a 30% chance," he said. "Are you worried? Sure, but you don't change your strategy at nythis point. We continue to do the same things we have always done." ■

# Aftermath . . .

*Continued from page 1*

Means Committee proposal to limit the tax deductibility of interest payments on money borrowed to finance takeovers or stock buybacks.

"We've ridden a long wave of prosperity and the market was overvalued," said H. Kent Atkins, chief investment officer of Bankers Trust Co. — Investment Management Group, New York. "It's a sizable correction, and it occurred very rapidly, but it's still a long foreseen correction," he said.

"When bubbles burst," said William L. Fouse, chairman of Mellon Capital Management, San Francisco, "things come down quickly. The rapidity was perhaps exaggerated by portfolio insurance."

**The impact**

Executives at many institutions emphasized that although they and others had suffered paper losses, the crash was not a disaster. Most of them reported declines close to, or just slightly below, the market decline, and emphasized they lost only what they had gained this year. They still have four years of bull market gains in their portfolios.

The American Telephone & Telegraph Co. pension fund, New York, declined less than the market during the crash, said David P. Feldman, corporate vice president.

The fund, which had $31 billion in assets Sept. 30, was 50% in stocks before the crash, equally divided between passive and active management. While the passive portfolios declined about as much as the market, the best-performing active manager was down only 10%, he said.

Overall, the market drop put the fund back to its size at the beginning of the year.

"It was a hit, but I think it's a part of the business we're in," Mr. Feldman said. "The markets go down as well as up. It's a lot more fun when they go up, but everyone anticipated a correction."

The $13 billion University of California pension and endowment funds, which typically are 75% invested in large-capitalization, well-financed companies with consistent growth records, "had spectacular performance before the crash," said Patricia Small, associate treasurer.

During the crash, "the whole portfolio lost about 20% of its value. We went from about $10 billion to about $8 billion in common stocks. Our common stocks had been up 38% from the first of the year until Sept. 30, so we gave up a large part of the gain."

Based on interviews with more than 30 major institutional investors, *Pensions & Investment Age* estimates the 100 largest managers of pension funds lost $140 billion in pension assets during the crash.

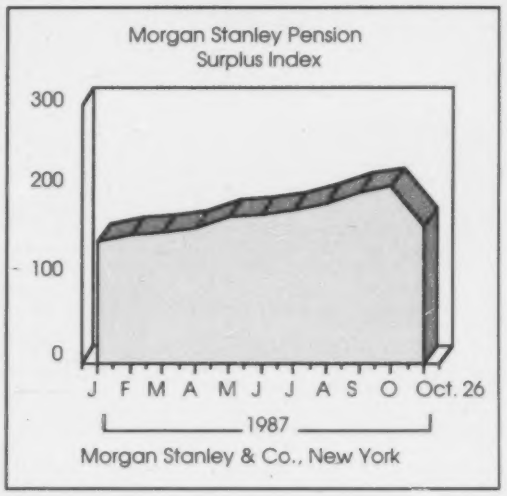
And as the charts on this page and page 1 show, corporate pension funds in aggregate still have a healthy cushion of surplus assets.

In fact, pension funds have almost as large a surplus after the crash as they had at the beginning of April. The Morgan Stanley Pension Surplus Index started the year at 132.96, rose to 144.87 by April 1, peaked at 176.11 Oct. 1 and fell to 144.6 Oct. 26.

Marty Leibowitz, a partner at Salomon Brothers Inc., New York, estimated pension funds assets were about 60% greater than liabilities April 1, and they grew to be 104% greater Oct. 1. By Oct. 26 they had declined substantially, but still were 60% greater than liabilities.

Pension funds "haven't given back all the gains yet," said Jeremy Gold, principal at Morgan Stanley & Co., New York. "If things stabilize where they are, we would still see lower pension expense in 1988 than in 1987."

According to Mr. Leibowitz, pension funds have been hit by a "double whammy" since the crash. Not only have stock prices plummeted, but declining interest rates have increased the present value of liabilities. This explains why the pension surplus declined more than 40%, significantly more than the market. Nevertheless, he said, pension funds, overall, are still well funded.



As a result, there is no sense of panic among pension fund executives and trustees.

The equity portfolio of the California Public Employees' Retirement System, Sacramento, declined $7 billion from a high of $21 billion between the end of August and the end of the day Oct. 19, but the fund's trustees reacted calmly and supportively, said Greta Marshall, investment manager.

They understand market corrections occur, Ms. Marshall said. In addition, the fund had gains in its fixed-income portfolio during the same period that partly offset the losses in the equity market.

**Some were buying**

The immediate reaction to the decline by a number of institutions was to buy stocks because value was detected in the market once again.

"You can look across the board and it's a bargain," said O. Thomas Barry III, senior executive vice president and director of investments for George D. Bjurman & Associates, Los Angeles.

Bjurman, which had raised some cash before the crash, has used some of it in buying such stocks as **Anheuser-Busch Cos. Inc., Dow Chemical Co., Smithkline Beckman Corp., NCR Corp.** and **Digital Equipment Corp.**

"We bought hundreds of millions of dollars in stocks, mostly great big blue-chip companies — the ones that got the hell beat out of them," said Peter Anderson, senior vice president-investments at IDS Financial Services, Minneapolis.

"We said this was a good time to buy, so we've been buying," said Ms. Marshall. "We had $3 billion in buying reserves and we have been trying to get the best deals."

She noted fund officials had said long before the crash they would buy into any decline, and because the fund was providing liquidity in the panic-driven market, it was able to drive hard bargains.

Independence Investment Associates, Boston, which had raised equity portfolio cash to 20% early in the year, also bought in the aftermath of the crash.

"We began buying heavily (Oct. 19) and then continued the buy program aggressively on Tuesday. By the end of the day Tuesday, we were fairly close to fully invested," said William Fletcher, executive vice president and chief investment officer.

Centerre Trust Co. of St. Louis, had cash reserves of about 5% when the crash began and redeployed that in the market during the sell-off. In addition, it sold some bonds in balanced accounts to buy bonds at "bargain prices," said Jim McGuire, senior vice president.

The New Jersey Division of Investment put about $100 million into the stock market during the week ended Oct. 23, said Roland M. Machold, director. "We think this is panic oriented." He said the fund might commit more, "but since the market has been moving toward us, we might wait and see."

**Short-term effects**

Institutional investors generally saw both short- and long-term effects of the crash.

The short-term effects largely revolve around the economy and the government.

Most interviewed expect some slowing of the economy, but do not expect the crash by itself to bring on a recession.

"Our view is that the actual damage to the economy in terms of wealth effect probably won't be too bad and won't lead to the conclusion that we're heading into a recession. I don't think that's in the cards," said Victor J. Melone, chief investment officer, Manufacturers Hanover Investment Corp., New York.

"Wall Street and the brokerage community have come out of this in far better shape than anyone had a right to expect. That's quite bullish, and the result is that we'll be able to bounce back much faster."

Frederick Joseph, chief executive officer, Drexel Burnham Lambert Inc., New York, said the damage to Wall Street will include "a lot of broken deals."

Initial public offerings "are going to be very difficult to do. In mergers and acquisitions and (leveraged buy-outs), most deals (previously in the works) are being renegotiated," he said. In addition, the high-yield bond market is being segmented by qualit, with the bottom quartile "having a hard time finding people to step up and buy the issues."

"Near-term, capital is very nervous, but when it analyzes the numbers, it is available," he said.

Most investors interviewed also

*Continued on page 54*

# Financing . . .

*Continued from page 2*

Medium-term note programs have been especially popular, because they offer flexibility. Issuers offer to sell the continuously offered debt to investors at certain rates for various maturities. Among those issuing such debt since the market plunge are Eastman Kodak Co., Rochester, N.Y.; ITT Financial, an operating unit of ITT Corp., New York; General Electric Credit Corp., Stamford, Conn.; Johnson & Johnson, New Brunswick, N.J.; and General Motors Acceptance Corp., Detroit. Investment bankers expect to see many more in the weeks ahead.

"You can take advantage of rates without going to a full debt issue," said Mr. Starkman of American Express, which has filed a $500 million shelf registration with a piece carved out for medium-term notes.

"You can do it at a bit lower cost in these shorter maturities. It's a way to issue paper quickly . . . and you can fund opportunistically."

Wall Street's finance experts point out that intermediate financing may be the answer for many companies, because it can tide the company over until the market settles and the future course of interest rates becomes clear while providing for short-term financing needs. They stress these financing alternatives are not a substitute for equity offerings, only a chance to take advantage of the lower interest rate environment.

"Advise them (corporate treasurers) to take advantage of some windows, especially MTNs, for intermediate financing and then wait and see," said Robert A. Schwartz, vice president and senior financial economist, Merrill Lynch Capital Markets, New York.

Internationally, the environment for U.S. corporate issuers is much less attractive. Shell-shocked foreign investors are wary of dollar-denominated debt. According to Salomon Brothers, the week after the crash international issuance by U.S. corporations stood at $158 million, compared to the $2 billion monthly average for the first nine months of 1987. None of the issues was U.S.-dollar denominated.

Investment bankers also recommended financing alternatives such as incorporating some kind of option in the 10-year bond such as a call option. In that case, a company would issue a 10-year bond, non-callable for five years, then sell the call option back to the underwriter to earn the option premium. The issuer would end up with a 10-year, non-callable bond. Some issuers are also looking at swapping floating-rate debt for fixed-rate debt.

The corporate finance experts also agree there are fewer options in this volatile market for non-investment grade companies, which often rely on the junk bond market for financing. That market has skidded as investors fear that an economic downturn will be bad news for junk bond-financed companies. There's been a dearth of new issues. Investment bankers urge non-investment grade companies to stay on the sidelines until the market calms down.

The biggest losers likely will be start-ups, which rely on initial public offerings and venture capital. The IPO market came to a grinding halt and venture capitalists who can afford to be more selective are turning to companies that have moved to the second phase of growth.

"We view this as an opportunity to improve the quality of our portfolio in later stage growth companies," said venture capitalist Alan Patricof, chairman of Alan Patricof Associates, New York.

Elsewhere in the private placement market, which is flourishing, cash-rich institutional investors are bargain hunting, albeit with caution.

For some companies, it may make sense to seek out the private placement market, which can provide competitive terms and quick turnaround.

"There's plenty of money. We have money to invest, but right now there's more talk than action," said Rodney Reynolds, senior managing director, Prudential Capital Markets Group, adding that most business is being done with the highest quality companies. He said there was still a "reluctance" to do business with weaker credits because of the uncertainty of the impact of the economy on those companies.

"Quality and value are what we are looking for," said Jack Cartland, vice president-private finance, Aetna Life & Casualty Co., Hartford, Conn.

Financing availability depends to some extent on what the money will be used for. Some financing sources are reluctant to lend money for expansion plans until the market settles. In the leveraged buy-out market, funding hasn't dried up entirely for companies trying to raise money to do buy-outs.

Joseph L. Rice III, president, Clayton & Dublier Inc., a New York private investment firm, said he is not having trouble arranging $200 million in financing to acquire the Oklahoma division of Safeway Stores Inc. The transaction was announced five days before the market collapsed.

"The amounts may be marginally less (from the banks) and it may be marginally more expensive," Mr. Rice said. "The net-net is sound transactions will go through."

He added institutional investors that have previously committed funds to buy-outs arranged by Clayton & Dublier had not pulled back because of the stock market crash. ■

# Retiree health proposal could damage stocks

By Fred Williams

WASHINGTON — The recent plunge in stock market prices may be insignificant compared with the drop that could result if the Financial Accounting Standards Board requires corporations to accrue liabilities for retiree health benefits on their balance sheets.

The co-authors of a new study on measuring and funding corporate liabilities for retiree health benefits warn stock prices could suffer significant downward pressures after the FASB begins requiring companies to accrue these liabilities. The final FASB ruling is expected late next year.

If, as expected, the FASB adopts such requirements, the annual expenses of corporations providing retiree health benefits could be from two to eight times current expenses, according to Bill Reimert and Phyllis Doran, consulting actuaries with the New York-based firm of Milliman & Robertson, and co-authors of the study released Nov. 12 by the Employee Benefit Research Institute Education and Research Fund.

# Funds targeting '88 proxy fights

By Marcia Parker

Brimming with confidence after their first proxy season as full-fledged activists, institutional investors have targeted more than a dozen companies, including International Paper Co. for the second time, for their 1988 campaigns to get poison pills rescinded.

The $25 billion Teachers Insurance and Annuity Association — College Retirement Equities Fund, New York, which is in the process of finalizing its plans for the upcoming proxy season, notified Purchase, N.Y.-based International Paper last week it is sponsoring an anti-poison pill resolution there for the second year in a row. CREF wants the International Paper poison pill rescinded unless it is approved through a shareholder vote.

The $31.5 billion New York City Retirement Systems plans as many as 14 anti-poison pill resolutions, but has not yet finalized the list of companies.

District unions of the $10 billion United Brotherhood of Carpenters Union, Washington, are sponsoring anti-poison pill resolutions at Boise Cascade Corp., Boise, Idaho; and MCA, Universal City, Calif.

The $13.5 billion State of Wisconsin Investment Board, Madison, is sponsoring a resolution at Allied-Signal Inc., Morristown, N.J., to force the company to put a shareholder rights plan to a stockholder vote.

Even though the 1988 proxy season is months away, big public pension funds already have selected the companies and the corporate governance issues that are sure to generate another round of heated debate between institutional investors and big business in 1988.

This year's proxy season was dominated by resolutions calling on companies to withdraw shareholder rights plans, which boards enact — sometimes without shareholder approval — to make it harder for the firm to be taken over. Nearly 60 companies faced challenges on such poison pills in 1987. None passed, but several resolutions netted a relatively strong show of support from shareholders.

It's too early to tell if 1988 will be a repeat of 1987, but it's clear there will be plenty of sponsors of anti-poison pill and anti-greenmail resolutions and other resolutions calling for confidential proxy voting and for companies to pull out of South Africa.

Sources also said at least one public pension fund is considering trying to get a director elected to the board of certain corporations and another public pension fund is considering hiring a proxy solicitation firm.

The hiring of a proxy firm would be a first, and could indicate public pension funds would be willing to wage a full-scale proxy solicitation campaign. That would escalate their participation from merely acting as sponsors of proxy resolutions.

Sponsors who want their resolutions to be included in the 1988 proxy statements companies prepare in advance of annual meetings must notify most companies this month and next.

In recent days, the first letters have gone out to chief executives across the country, according to resolution sponsors, proxy firms and company executives. International Paper, Boise Cascade and Allied-Signal received their letters. Gillette Co., Boston, heard from the $38 billion California Public Employees' Retirement System, Sacramento, which is sponsoring an anti-greenmail resolution.

Scores of other companies will be targeted in the coming weeks. Although institutional in-es-

# Corporate earnings safe despite market plummet

By Barry B. Burr

Corporate financial executives don't expect October's stunning market crash to affect pension expense or corporate earnings that will be reported for 1987.

Top management at a number of the companies sampled requested special reports from their pension accounting and investment executives on the effect of the crash on corporate financial reporting under the Financial Accounting Standards Board's Statement 87.

The pension accounting statement, unlike the old Accounting Principles Board Rule 8, requires much of the volatility in pension earnings, assets and liabilities to flow directly to the income statement and, beginning in 1989, to the balance sheet.

The upshot of their reports eased fears.

"It's not the market that crashed; it's those expectations" of high returns, said Gary Pines a consultant at Towers Perrin Forster & Crosby, Chicago.

At Hewitt Associates, Lincolnshire, Ill., Michael L. Johnston, partner, said, "Pension funds did not lose anything. They lost the expectation of a whole lot of overfunding."

In interviews, corporate executives said they would end up with overall investment gains for 1987, and slightly larger

# Managers split on world scene

**By Marlene Givant**

Bottom-up international managers are divided on whether markets have bottomed.

Some are tickled over the cut-rate stocks around the world and are buying like crazy; others are on the sidelines, leaving money in bonds and short-term instruments.

Many are waiting because of the sharply reduced liquidity in markets other than Japan, the United Kingdom and West Germany and because they need a clearer economic sense to re-evaluate company earnings estimates.

The country mix of the managers, which results strictly from bottom-up stock selection, has changed little since Black Monday.

For all international managers in InterSec Research Corp.'s universe, the median portfolio's geographic asset mix in the third quarter overweighted the hard-hit Pacific Basin and U.K. market as compared with the Morgan Stanley Capital International Europe Australia Far East index, and underweighted Japan, which suffered relatively little compared to other major markets.

The median fund had 31.5% in Japan, 12.5% in other Pacific Basin markets, 19.5% in the United Kingdom, 26.3% in continental Europe, 2.8% in other markets and 1.9% in cash at the end of September, according to the Stamford, Conn., research firm. That represented only a slight change from the second quarter.

The EAFE index had 56.1% in Japan, 5.8% in the rest of the Pacific Basin, 15.6% in the United Kingdom, 22.2% in continental Europe and 0.3% in other markets.

**Geographic asset allocation of non-U.S. portfolios**

| Country/region | InterSec median portfolio | | EAFE | |
|---|---|---|---|---|
| | 3rd qtr. | 2nd qtr. | 3rd qtr. | 2nd qtr. |
| Japan | 31.5 | 32.4 | 56.1 | 56.8 |
| Other Pacific Basin | 12.5 | 10.1 | 5.8 | 5.0 |
| United Kingdom | 19.5 | 21.0 | 15.6 | 15.5 |
| Continental Europe | 26.3 | 25.0 | 22.2 | 22.4 |
| Other | 2.8 | 2.2 | 0.3 | 0.2 |
| U.S cash | 1.9 | 2.3 | NA | NA |

Source InterSec Research Corp., Stamford, Conn.

"The crash and horror that hit everyone when the markets of the entire world became illiquid for a whole day brought home to people that liquidity in a market is totally important. Therefore the tendency for most people is to put money into more liquid markets," said David Skinner, managing director of Martin Currie Ltd., Edinburgh, Scotland, which managed $310 million for U.S. tax-exempt clients at the end of September.

Although bottom-up managers focus on stocks more than markets, many are stumped by the current economic uncertainty.

"The issues on the table are macro issues. With what's going on now — the great waves of ma-

# *Harvard commits to 3rd energy deal*

**By Fred Williams**

CAMBRIDGE, Mass. — The Harvard University endowment, with about $3.5 billion in assets, has made its third major oil and gas investment since undertaking a direct-market approach last December.

Harvard will participate in a $15 million developmental drilling joint venture through Aneas Venture Corp., the investment affiliate of Harvard University, along with Harken Oil & Gas Inc., Dallas, and George Soros, president of Soros Fund Management, New York.

A spokesman for Harken declined to reveal the lead investor in the deal or the amount each partner will invest.

Harvard officials could not be reached at press time.

Both Aneas and Mr. Soros are Harken shareholders and two Harvard Management Co. officers, Michael Eisenson and Donald D. Beane, sit on Harken's board of directors.

According to the Harken spokesman, the joint venture will permit Harken to drill up to 50 wells during the next three years. The wells will be drilled primarily on natural gas prospects on undeveloped leases and acreage operated or owned by Harken.

Harvard has a continuing oil and gas investment program through Aneas and made its first direct oil and gas deal late in 1986 when it decided to put $20 million of its assets into an acquisition program, also with Harken (*Pensions & Investment Age*, Dec. 8). That two-year program calls for separately negotiated acquisitions of oil and gas reserves and investments in energy-related companies.

Later in December, Harken announced the closing of the acquisition of Kennedy and Mitchell Inc. a privately held, independent oil and gas company based in Denver by KMI Acquisition Co.

KMI Acquisition is owned 49% by Harken and 51% by Aneas. KMI is an oil and gas exploration and production company with approximately $20 million in assets.

In April, Harvard became the lead investor in a $145 million offshore oil and gas exploration venture known as Smith Offshore Exploration Co. (*P&I Age*, April 20). ■

# Morgan Stanley on top

**By Brad Rudin**

Morgan Stanley Group Inc. outpaced its publicly owned rivals on Wall Street with third-quarter earnings results that mark a bright spot in what proved to be a trying quarter for some brokerage firms.

The list of firms that were unable to cope satisfactorily with volatile markets is likely to grow as a result of the Oct. 19 stock market crash, analysts said in comments about prospects for the fourth quarter.

Brenda McCoy, the brokerage analyst at PaineWebber Inc., said the 15% to 20% decline in 1987 earnings she had predicted for the brokerage industry will be revised to reflect the industry's more bearish prospects.

Although the industry took a hard blow from the stock market crash, brokerage firms still possess considerable financial strength.

"The rated brokers have met their funding requirements without interruption," Standard & Poor's Corp. said in its Credit Week publication. "The ability to fund during these difficult times demonstrates the markets' confidence in the largest brokerage firms."

Brokerage firms rated by S&P suffered losses from risk arbitrage, equity inventory positions and counterparty failure, but not enough to impair their capital, the rating agency said.

"None of the firms determine their own fate," said John Keefe, the brokerage analyst at Drexel Burnham Lambert Inc. "Some are more nimble than others, but sooner or later their fate is determined by the markets."

PaineWebber Group Inc., L.F. Rothschild Holdings Inc. and Salomon Inc. all turned in

# Consultants

## Execs place trust in 'buddy system'

By Anne E. Schwimmer

Getting recommendations from colleagues appears to be the first step of many pension fund executives in hiring consultants.

In addition to word of mouth, the executives also use published directories and the firms whose representatives have knocked on their doors in compiling their first list of choices.

Once they get that input and narrow the list, the fund executives concentrate on choosing a consultant that meets numerous criteria ranging from experience to fees.

"We talked to people in the real estate business and to people in the pension fund business. Certain names came up and we checked them out," said DeWitt Bowman, chief investment officer at the $3 billion City & County of San Francisco Employees Retirement System.

The fund hired Pension Realty Advisors, San Francisco, earlier this year (*Pensions & Investment Age*, June 15).

Before Tom Vanneman, financial manager of the $216 million Alexander & Alexander Inc., Baltimore, pension plan, selects a consultant, he talks to other consultants "to see what they have vs. what we are getting."

The company uses SEI Funds Evaluation Services, Wayne, Pa., as a consultant. Mr. Vanneman periodically checks others, but he doesn't have to look very hard to find them: "We rely on them to contact us. They are usually very good at that."

Alexander & Alexander uses several criteria in evaluating consultants.

Mr. Vanneman said the consultant should have a "pro-active approach to pension consulting," which he defined as a willingness to actively seek him out with information and advice.

He also emphasized the importance of timely research on complex topics like pension insurance. In choosing a consultant, Mr. Vanneman added, the workload of the account representative is also an important factor, because he wants to be sure enough time will be devoted to his company's interests.

*San Francisco's DeWitt Bowman asked other professionals for recommendations.*

Nancy Wellhousen, the city treasurer who oversees the $65 million Oklahoma City Employee Retirement System, said she called on industry colleagues for input before hiring Fiduciary Capital Advisors Inc., Westfield, N.J., in 1986.

"We called the state pension system and the city of Tulsa and got recommendations from them," she said.

"Then we called the three they used and interviewed them."

Officials at the $470 million Jacksonville (Fla.) City Retirement System, referred to a list of consultants who had called on them in the past and on the Money Market Directory of Pension Funds, said Richard Cohee, city treasurer.

"We mailed out requests for

## Consultants add value to go with data

By Fred Williams

With performance data easily available from their master trustee or custodian, pension executives expect their consultants to add value and depth through their evaluation services.

Performance measurement services have become ubiquitous among pension consultants; virtually every firm listed in the *Pensions & Investment Age* directory offers various levels of assessment as part of a range of consulting services.

While many claim their services are unique, one of the usual differences is in the level of additional support that goes with the numbers.

Southwestern Bell Corp., St. Louis, has used Buck Pension Fund Services, New York, since the regional telephone operating company was established in 1984.

Roger Wohlert, assistant treasurer-corporate finance, said he depends more on the performance evaluation services of the $6.5 billion fund's master trustee, First Republic-Bank Dallas, than on Buck.

"We rely on the performance evaluation and calculations with First Republic and we use Buck to test the reasonableness of the data. They (Buck) get the information at the same time and they have their own universe. We compare our managers against the indexes and TUCS (Trust Universe Comparison Service) and against Buck's universe. The Buck universe is smaller, but we feel it is of a higher quality of managers because it includes managers they would recommend. If our managers are doing well against them, then it is probably a good sign because they have already passed some screens with Buck," said Mr. Wohlert.

James Baker, executive secretary of the $202 million Kansas City (Mo.) Public School Retirement System, said his fund was seeking a performance measurement service when it hired William M. Mercer-Meidinger-Hansen Inc., Louisville, Ky., two years ago. It now uses the firm's full consulting service.

"We find it is necessary to protect us fiduciarily. It helps us show that we have made valid investment decisions and indicates to us our bogies and cumulative situation with our investments. We need to look at our managers and make sure they are doing what they said."

"We could get the performance evaluation information from our custodian bank . . . any large custodial operation can do similar things (as a consultant), but the key thing is do they draw on others to compare with. Custodians won't give opinions or advice. For advice you go to a consultant; for numbers you can go to the bank."

A spokesman at DeMarche Associates, Kansas City, Mo., said the firm's performance evaluation work "goes much deeper than simply compiling performance numbers as trustees do. We audit all performance data. We look at why and how the results were achieved. It is a matter of dissecting all the transactions and looking at the individual securities bought and sold."

*Roger Wohlert uses a consultant to get a clue on how Southwestern Bell's managers compare with others.*

Performance results are reviewed and audited at least quarterly, he said, from data taken from trustee and custodian records.

"From that we develop our own performance numbers. Every transaction is traced and matched as of the trade date. It is a total recreation of each period, everything is recalculated and audited," the DeMarche spokesman said.

While the larger pension consultants such as Hewitt Associates, SEI, Wilshire Associates, Frank Russell Co. and Mercer-Meidinger-Hansen still dominate the performance evaluation market, smaller consultants believe their services are equal to those provided by big companies.

Small and midsize consultants see their services as more flexible and more easily customized to the client's needs.

Richard Holbein, president of Richard Holbein & Associates, Dallas, unlike many consultants, offers performance mea-

## IMCA keying on professionalism

By Anne E. Schwimmer

DENVER — Professionalism is serious business to the Investment Management Consultants Association, and the group is doing something about it.

The association, which was started in 1985 by eight professionals and now boasts 265 members, will celebrate its second anniversary Thanksgiving Day.

To promote professionalism among consultants and other professionals serving small and midsize accounts, the IMCA will hold its first certification course in April at the University of Pennsylvania's Wharton Business School, Philadelphia.

Still to come is a major attempt to standardize performance reporting standards of money managers. The IMCA is having difficulty rallying support for the idea in the industry, despite the backing of some money managers.

The stock market's volatility, however, may boost the group's cause. "The current difficult time is going to bring out all the problems," said George A. Dunn, immediate past president of IMCA and vice president of EF Hutton & Co. Inc., Washington.

The certification program tells clients IMCA members have a certain amount of training, knowledge and experience, said James P. Owen, executive vice president of IMCA and managing director of NWQ Investment Management Co., Los Angeles.

The weeklong program, the first session of which already is overbooked, will be repeated two or three times a year, said Hal Rossen, president of the IMCA and senior vice president of the investment management consulting services department of Prudential-Bache Securities, Detroit.

In addition to improving professionalism in the industry, the IMCA's goals are to educate executives of midsize funds ranging from $1 million to $50 million, on the help available to them from investment management consultants and to promote and protect the interests of the profession, said Mr. Owen.

The non-profit organization's membership includes money managers, consultants, certified public accountants, attorneys and others who serve middle market accounts.

*James Owen, executive vice president; George A. Dunn, past president; and Hal Rossen, president, all see a bright future for the Investment Management Consultants Association.*

As part of its educational efforts, the IMCA runs a yearly conference on issues facing the industry. "It's a real nuts-and-bolts type of conference," said Mr. Dunn. This year's conference will be held in Palm Beach, Fla. April 7-10. Topics to be covered include asset allocation and matching management styles with investment objectives, he said.

Mr. Owen said IMCA is mostly involved with middle-market accounts, which often do not have the resources or time to create an in-house staff such as those used by larger funds to deal with the problems of fund management.

Midsize accounts, he said, need consultants to aid them in the process of choosing managers, setting goals and objectives for the fund and tracking the fund's performance.

"The midmarket account," said Mr. Dunn, "needs someone to write out investment objectives and to supply a third-party analysis of how those objectives are being met. Eighty percent of midmarket accounts do not have a written set of objectives."

In addition, he said, such accounts do not have access on their own to the sophisticated data bases large funds use. These could be made available to them through their consultant.

"The objectives and investment goals of midmarket accounts are quite different from those of larger plan sponsors," said Mr. Owen. The larger plan sponsors want to "outperform the S&P and are willing to assume greater-than-market risk," he said. Smaller sponsors, however "are not out to beat the market," Mr. Owen said.

"They are seeking to earn a greater average constant return in order to beat inflation. The preservation of capital is upper most in their minds," he said.

# Unregistered advisers used by few

By Trudy Ring

Some consultants, both in separate account arrangements and pooled manager-of-managers funds, have placed client money with investment advisers not registered with the Securities and Exchange Commission.

They usually have not done so for pension funds covered by the Employee Retirement Income Security Act. Under ERISA, fund sponsors and trustees cannot pass fiduciary responsibility to an unregistered manager. However, these consultants said unregistered managers have provided good performance and varied investment styles for non-ERISA funds, endowments and foundations.

Yet other consultants said with the ease of registration, there is no good reason for advisers not to register and thus, no reason to use unregistered managers.

Evaluation Associates Inc., Westport, Conn., has used unregistered investment partnerships for some clients, said Keith L. Stransky, vice president. These clients represented a mixture of tax-exempt and taxable accounts, but do not include ERISA funds, he said.

He declined to name the clients or advisers or state the amount of money involved. Evaluation Associates does not use unregistered advisers in its pooled fund, but does in separate accounts for which the firm acts as a manager of managers, he said.

Unregistered managers have some advantages, Mr. Stransky said.

"One of the positives is that these managers have a large part of their net worth in the same partnerships as the clients," he said. Also, unregistered advisers can do some things registered managers can't do, such as shorting securities or buying commodities.

A disadvantage is that unregistered managers tend to be very private and unenthusiastic about disclosing investment performance results or other data, Mr. Stransky said. However, Evaluation Associates has persuaded the advisers it has used to release this information.

Clients using these investment partnerships have had to sort through complicated agreements, usually about 50 pages long, he said. "You need a lawyer, really, to read a partnership agreement," he said.

In the arrangements it has made for using unregistered advisers, Evaluation Associates has not assumed fiduciary liability. It has monitored advisers for the clients, Mr. Stransky said.

The firm hasn't gotten to the point of deciding whether it would recommend use of unregistered advisers for ERISA clients.

"I would say that you have to have a sophisticated investor to use unregistered advisers," Mr. Stransky added.

Collins Associates, Newport Beach, Calif., has used a few unregistered advisers in its pooled manager-of-manager funds, said Budge Collins, president. He said he did not use the unregistered managers for ERISA funds, but for foundations. He declined to name clients or advisers.

He said he believes unregistered managers often are better than registered ones. Like Mr. Stransky, he noted they can go short in the stock market. Also, Mr. Collins said, unregistered advisers often have extremely low transaction costs.

Clients haven't objected to the use of unregistered managers, he said. "They love them," he said. "Performance has been truly outstanding," though he declined to release any figures.

He said he monitors about 50 unregistered advisers; of these, he has used six. They are primarily equity managers, he said.

Mr. Collins said these managers are fiduciaries, but in these arrangements Collins Associates also takes on fiduciary responsibility as a registered investment adviser.

Berg Fiduciary Consultants, Port Chester, N.Y., got an ERISA client together with an unregistered manager just once, about five years ago, said Paul E. Berg, president. It was done only because the manager operated on a performance-based fee schedule, which at the time wasn't allowed for registered advisers.

The arrangement involved an exhaustive legal review, Mr. Berg said. The conclusion was there was little risk to the fund in using an unregistered adviser, as the adviser was assigned just $1 million of the client's $100 million pension fund, he said.

"Other than that one instance, we would never use an unregistered adviser for an ERISA account," Mr. Berg said. He said he would have the same reaction for endowment and foundation money.

"It's so easy to register," he said. "There's really no excuse not to get registered." He noted the SEC now allows performance-based fees, so the one obstacle to registration of the adviser he used is gone.

Mr. Berg said he couldn't recall the name of the adviser, which had about $20 million under management and specialized in small-capitalization stocks in high-technology companies that were just beyond the initial public offering stage. He declined to name the client that used the manager.

Other consultants also voiced reservations about use of unregistered advisers.

"In the traditional equity and fixed-income areas, you can find a registered investment adviser to give you what you want," said S.A. "Sandy" Lincoln, managing director of William M. Mercer-Meidinger-Hansen Inc., Deerfield, Ill.

To his knowledge, none of his clients ever has hired unregistered managers as a result of Mercer-Meidinger-Hansen searches, but some such firms might have been included in the searches. From time to time, clients may want a specific unregistered investment firm to be included in a search, Mr. Lincoln said.

He added that a manager's being registered doesn't excuse consultants and pension executives from doing due diligence on that manager. "I don't look at the SEC registration as a necessary and sufficient protection," he said. ■

*We don't react at the drop of an interest rate.*

Successful investing depends a lot more upon how well you react to market changes than upon how quickly.

This is not to say that we don't change as conditions change. We do. We just don't believe that something as important as your retirement fund portfolio should be altered by short term factors.

Our goal is to deliver long term growth through equity investments and prudent portfolio balance through sound fixed-income management. We believe we're uniquely qualified to meet these objectives.

Because at David L. Babson & Company, we have a very simple philosophy: the best way to achieve investment success is to start with the best people. And then give them the resources and the power to make decisions. Informed decisions.

How do we attract and keep the best people? By giving them the opportunity to literally be a part of the company. Our company is owned by the active members of the professional staff, none of whom own as much as 15% of the stock.

The result of having top-quality people is being able to create top-quality, low-risk, growth investments and fixed-income portfolios.

For example, we offer real estate investments that are an excellent way to diversify your retirement fund portfolio. Choose from a closed-end pooled fund or from separate investments. In either case, the goal is low-risk growth.

We also offer separately managed portfolios (similar to the Babson Enterprise Fund) of companies with small market capitalizations. These are companies that fill a niche in their particular industry. Companies in which management holds a large stake. Companies that we believe can help you meet your investment goals because we have thoroughly researched them in house.

So if you're looking for sound investments with limited risk for your retirement fund portfolio, consider David L. Babson. Because good performance depends on good planning. And you can't develop a plan without solid investment decisions.

For more information about what we can do for you, call Peter Thompson, President, at (617) 225-3800. Or write: David L. Babson & Company, Inc., One Memorial Drive, Cambridge, MA 02142.

**Most Master Trust teams are connected by telephone. Not ours.**

It's pretty obvious that a Master Trust team can only run at peak efficiency when everyone on the team knows what everyone else is doing.

However, of all major money center banks, only The Bank of New York seems to have figured out that the way to achieve this is not via telephone tag.

It's by having each Master Trust team work together–not just figuratively, but literally. Desk to desk. Terminal to terminal.

So your administrative officer can literally turn to your investment specialist or your accountant to get your questions answered and your requests acted upon immediately. For that matter, you can call any one of them directly.

What's just as important, The Bank of New York has committed its resources to supporting the teams with one of the most extensive and highly sophisticated "back office" complexes anywhere, featuring timely, accurate, audited reports, cash management services, advanced on-line technology and performance measurement.

To learn more about our team approach to Master Trust, call Roy P. Lanza, Vice President, at 212-530-3751. Or write him at The Bank of New York, 19 Rector Street, New York, NY 10286.

*Pensions & Investment Age* will take a look at the issues facing public pension funds in the Nov. 30 issue.

When investing in foreign countries, you need a secret agent.

An agent who knows the ins and outs of foreign financial centers. And who knows how to accomplish your global custody aims; quietly, swiftly, surely.

A secret agent called The Mitsubishi Bank of California. As part of the world's fourth largest bank, with assets in excess of $210 billion, we get the job done for your trust/custodial accounts handling security settlements and transfers, foreign exchange, income collection, and tax reclamations, without calling attention to ourselves or what's being accomplished for you.

And, Mitsubishi Bank brings you two additional security measures as well. There are no double agents. Your clients remain your clients. And, Mitsubishi Bank headquarters are in Los Angeles; the most advantageous time zone for seizing European and Pacific basin opportunities within a single business day.

How secret is Mitsubishi Bank? It ranks third, behind Chase and State Street, in global custody assignments. And how many people know that?

Call Gearey Johnstone at (213) 621-1305 for more information on how many ways your global custody needs can be met by having a secret agent. And how many ways your institution can profit from having the surveillance and protection of secret service.

The best kept secret in global custody.

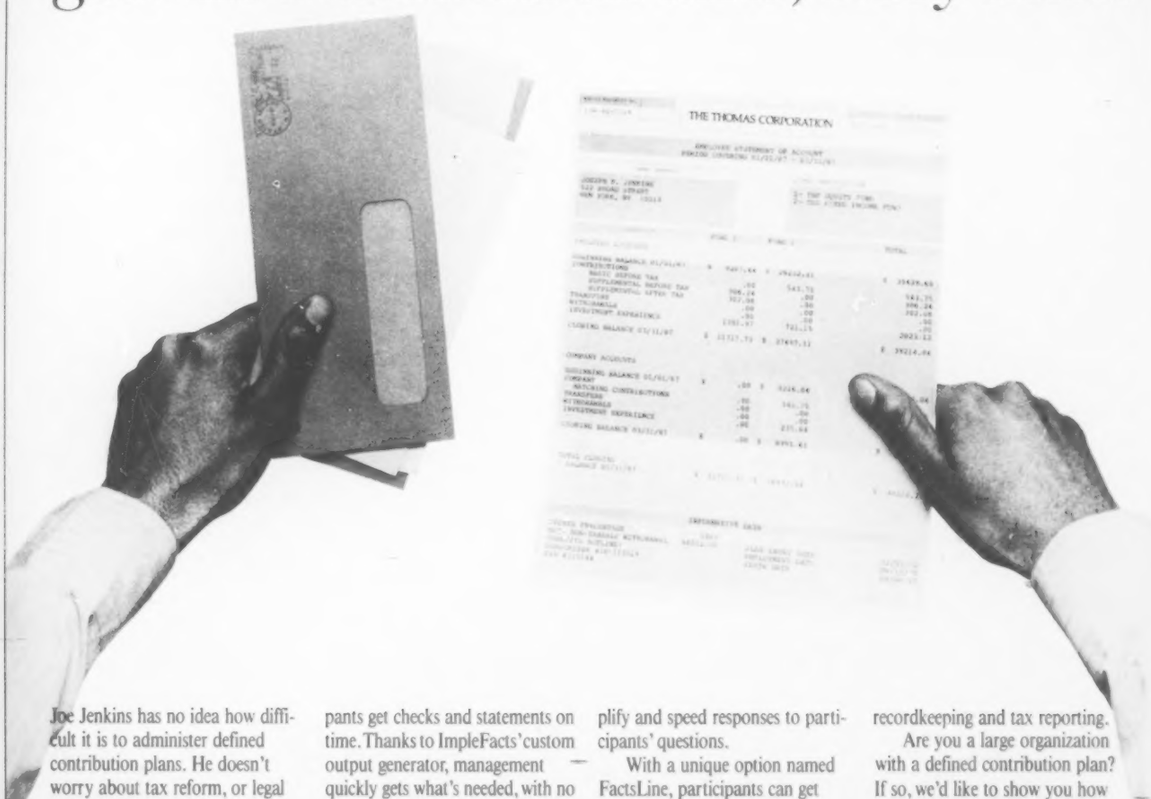
The firm also gives presentations to boards of trustees, staff and educational training.

*ImpleFacts—The Defined Contribution Administration System*

# Tax reform. Two major plans. 20,000 participants. But Joe Jenkins still gets his statement on time, every time.



Joe Jenkins has no idea how difficult it is to administer defined contribution plans. He doesn't worry about tax reform, or legal and regulatory changes that complicate an already complex problem. All he knows is that he always gets his statement on time.

Joe works for a large company that uses ImpleFacts to administer a defined contribution program with two major plans and 20,000 participants. Even the far-reaching effects of the new tax laws were taken in stride by this comprehensive software system from Erisco.

Not only do all 20,000 participants get checks and statements on time. Thanks to ImpleFacts' custom output generator, management quickly gets what's needed, with no special programming. This unique feature merges information from many sources, such as payroll, benefits, plan rules and participant accounts. Administrators can format and generate ad hoc reports, group summaries for example, by defining criteria online. They can amend plan changes online, or create reminders such as upcoming fund elections to be included as payroll stuffers. And they can design inquiry screens to simplify and speed responses to participants' questions.

With a unique option named FactsLine, participants can get routine account information via Touch-tone phone almost any time. It can cut administrative time and costs while improving service.

Since its introduction in 1972, the long-term benefits of ImpleFacts have been amply proved. The system's adaptability lets us make revisions and add enhancements when necessary. Its flexibility enables ImpleFacts to handle requirements ranging from 401(k)s, ESOPs and savings plans to loan recordkeeping and tax reporting.

Are you a large organization with a defined contribution plan? If so, we'd like to show you how ImpleFacts' timely, accurate recordkeeping can help you respond more quickly to participants, make payments faster and manage your plans more effectively.

IMPLEFACTS
*Erisco—The benefits of information*

*And now ImpleFacts for minis, too.*

That's right. All the advantages of Erisco's proven mainframe software, on a mid-range computer. But there's more.

**Your own IBM 9370. From Erisco.**
Now you can obtain both the software and the hardware from us, in a one-stop solution. You get all the flexibility and versatility of ImpleFacts, along with the modularity and performance of an IBM 9370. And from both companies comes a well-recognized, long-term commitment to customer service.

**A total solution in a compact package.**
The IBM 9370 fits easily in almost any office, with no special wiring or air conditioning. The modular design lets it grow along with your needs.

ImpleFacts and the IBM 9370—a dedicated solution for the many-faceted requirements of defined contribution recordkeeping.

**For more information.**
To learn more about ImpleFacts or other Erisco benefits software, call or write the Sales Department at Erisco, 1700 Broadway, New York, NY 10019, (212) 765-8500.

**When babies are your business, who helps your Master Trust grow up?**

Gerber®

The folks at Gerber Products Company are known for product consistency. And it's something they look for in a Master Trustee. Which is one reason they chose Harris Bank.

Our service teams stay involved with Gerber's day-to-day business developments to help maintain a thorough knowledge of their needs. And a continuity in their plans. So adjustments can be anticipated and changes made smoothly.

When Gerber branched into children's clothing, toys, and even the trucking business, assets from existing plans were pooled into the Harris Master Trust. It was the best way to maximize benefit plan effectiveness. And it was another sure step in their long and steady growth.

Continuity is very important when babies are your business. And even when they're not. Find out how we can take good care of your Master Trust. Call our Marketing Representative, Mr. Walter J. Kowalczyk, at (312) 461-7625.

It provides LAN-based equity research software systems to the investment management industry.

The firm has special expertise in the use of earnings-per-share forecasts in

Continued on page 59

# Add value . . .

*Continued from page 31*

surement as a separate service as well as part of a consulting package.

His firm is part of the Wilshire Cooperative Universe Service, through which 14 small consulting firms share data on 1,200 portfolios. "It offers me and my clients the ability to tap Wilshire Trust Services division for portfolio performance calculations, data processing and programming expertise," said Mr. Holbein.

"This is a new and growing system that allows us to add new information and develop new approaches as the clients' needs change. The dynamic and growing nature of our performance measurement system is such that we can customize and adapt it to the specific needs of the plan sponsor to fit his unique situation rather than taking his information and giving him a generalized performance evaluation," said Mr. Holbein.

He and other smaller consultants claim the information they develop is as useful and as valid as that generated by the larger firms.

"There is no statistical difference between the data generated by SEI and that from the Wilshire Cooperative Universe," Mr. Holbein said. "The other side is that by using a system such as ours, working with Wilshire provides a double-check on the information. They enter and crunch the numbers to make sure nothing has fallen through the cracks."

Ron Jones, partner in the Lincolnshire, Ill., offices of Hewitt Associates and manager of the firm's investment services group, agreed plan executives have access to a wide range of performance measurement services, but that it is the professional counsel offered by Hewitt that makes the difference.

"We're not in the same business as some others," Mr. Jones said. "We view (performance evaluation) as the basis of an ongoing consulting relationship. We don't claim our numbers-crunching ability is any better than anyone. What we say is different about ourselves is that we are all investment professionals and do our consulting around the numbers . . . We are offering our professional capabilities rather than just numbers."

Robert Thomas, president of Performance Evaluation Resources Inc., New York, a subsidiary of Thomson McKinnon Inc., said performance measurement and comparison numbers are widely available, but the quality and usefulness of that information varies.

"There are only a limited number of calculations and measurements that can be applied and everyone has them. What sets them apart are the perceptions one brings to the business," Mr. Thomas said.

"Many services don't allow the plan sponsor to make a decision and know why. (The sponsor) should know and be satisfied enough with his managers to retain them, or know whether to terminate them because they haven't performed well, or to add an incremental manager to his group. Performance measurement is a report card: Did I do good or bad? If I didn't do as well as I wanted, do I understand why and should I do anything about it."

Nancy Goerdel, investment director at the $4.2 billion Employees Retirement System of Texas said the system uses Wilshire Associates, Santa Monica, Calif., as its consultant but hired the firm primarily for performance evaluation.

"Texas law requires us to use an external performance evaluation service," she said. "They (Wilshire) have worked with us as far as giving us updated reports. It is not a customized service, they use a standard format, but they provide us with quality information we use for our investment committee. They are able to give us a good custom benchmark on equities since we can own and hold stocks only in U.S. corporations that have a 10-year dividend record and no (over-the-counter) stocks." ■

# Buddy . . .

*Continued from page 31*

proposals to 30 firms," he said. "From that, we got 15 responses, and a committee of two was responsible for reviewing those proposals."

"We scour the universe and get them to come to us, and then we sort it all out," Mr. Cohee said.

SEI and Callan Associates Inc., San Francisco, were chosen to handle the city's two funds, the $211 million Police and Firemen's fund and the $259 million general fund.

"The business as a whole is volatile, and we wanted to have two opinions to back each other up, since the funds are almost identical and the two consultants ought to reach similar conclusions about both," he added.

Among Mr. Cohee's criteria are the firms' current workload, past experience and ability to design an appropriate work plan. He also looks at cost.

The $2.5 billion Ohio School Employees' Retirement System, Columbus, "started with as large a list as we could find of those we had heard about from other pension funds or we had read about," Robert Cowman, assistant director of investment.

"Then we looked at specifics and culled it down to four to six possibilities who were asked to make another presentation to the board, which made the final decision." ■

Would You Really Trust
Your Company's Master Trust
To Someone Who Didn't
Make It A Top Priority?

You know a Master Trust can save your company time, money and headaches by pooling investments and consolidating administration of your employee benefit funds. But at a lot of trust companies, you risk getting lost in the shuffle instead of getting the attention you need.

The solution? Centerre Trust Company of St. Louis.

We make it a top priority to treat each client as a top priority. No matter how big or small. And this approach works so well, we're a bit surprised our competition hasn't caught on.

A Centerre Master Trust gives you everything you'd expect from a full-service Master Trustee: Comprehensive accounting and reporting, an on-line inquiry system for timely information about your account, a cash management system that generates income from money that might otherwise sit idle, and a securities lending system to boost your return on assets even further.

Get the personal *and* professional service you deserve.

Call Centerre about a Master Trust or Master Custody agreement today at (314) 436-9673. It's the only number we'll ever ask you to take.

**PIPER**

*The statistical data are extracted from Pensions & Investments' Performance Evaluation Report, a quarterly performance evaluation published by* Pensions & Investment Age. *PIPER details comparative performance data on equity and fixed-income funds at more than 200 banks and insurance companies. PIPER is compiled by Rogers, Casey & Barksdale Inc., Stamford Conn.*

# Stock leaders are optimistic

By Jacqueline Dutton

The managers of top-performing pooled equity funds said the storm of Black Monday and the subsequent gray days are clearing as stock prices are firming up.

With an optimistic outlook for the remainder of this quarter, they will maintain their heavy weightings in the capital and consumer-goods stocks that put them at the top of the Pensions & Investments' Performance Evaluation Report for periods ended Sept. 30.

PIPER measures the performance of 315 commingled equity funds managed by banks and insurance companies or their investment subsidiaries.

The United Bank of Denver's equity fund, managed by its investment arm, United Capital Management, Denver, was alone at the top for the third quarter, returning 18.8% compared with a second-place showing of 12.6% for the discretionary commingled fund of First Fidelity Bank, Newark, N.J., and 12% for the equity fund of Bessemer Trust Co., New York, equity fund.

Of the 315 equity funds ranked by PIPER, 30% beat the Standard & Poor's 500 stock index's return of 6.6% for the third quarter. The median manager returned 5.8%.

W. Lon Schreur, president of United Capital Management, said the fund was 75% invested in capital goods and basic industry stocks, which he said benefited from the dollar's decline and subsequent foreign sales.

Along with **Clark Equipment Co.**, **Caterpillar Inc.**, and **Ingersoll-Rand Co.**, the fund had positions in **Phelps Dodge Corp.**, **Asarco Inc.** and **Inland Steel Co.** The remainder of the fund was placed in special situation stocks, including **Long Island Lighting Co.**

Mr. Schreur said United Capital's holdings were hard hit at first during Black Monday, especially the heavy cyclicals, which were sensitive to fears of a recession. But at the beginning of November, he said, prices were beginning to rebound, and United managers are buying back some stocks they sold and are increasing their position in the heavy equipment stocks.

First Fidelity's 40-stock portfolio did well in the third quarter and 12 months despite a heavy cash position. John Walker, senior vice president, said the fund moved to 25% cash in May and stayed there through Oct. 19. Since the crash, cash was increased to 32%, and will stay there until the dust settles.

The First Fidelity fund resembled those of other top PIPER funds in its bias toward basic industry stocks such as **Caterpillar**, **Combustion Engineering Inc.** and **Koppers Co. Inc.** Consumer-goods stocks are also favored by First Fidelity, which had positions in **Archer Daniels Midland Co.**, **Interco Inc.** and **Firestone Tire & Rubber Co.**

Mr. Walker said the fund is adding to **Wolverine Technologies Inc.**, and is considering stocks such as **Duke Power Co.**, **Aetna Life and Casualty Co.** and **Johnson & Johnson**.

Greg Clark and Stanley Nabi, managers of Bessemer Trust's $200 million common trust equity fund, said the fund is recovering from its Black Monday losses and they are reducing cash to pick up additional current holdings at bargain prices.

The fund, which normally holds 37 stocks, seeks undervalued and unrecognized stocks to put the portfolio in a defensive position. Mr. Clark, executive vice president-U.S. equity investments, said these were the stocks other investors were moving into as the market started on its downslide in late August.

The largest positions were in **Eastman Kodak Co.** and **General Electric Co.** The diversified fund also included other companies with good earnings momentum in a market that became very much earnings-driven, ac-

# Bond winners shorten terms

By Fred Williams

Fixed-income portfolio managers who shortened the maturities of their holdings were top performers in the Pensions & Investments' Performance Evaluation Report universe for the third quarter.

Short- and intermediate-term funds dominate the third-quarter PIPER results as astute portfolio managers turned more defensive in a bear market for bonds.

For the three- and 12-month periods ended Sept. 30, the Shearson Lehman Government/Corporate bond index returned −2.9% and −0.4% respectively. The median PIPER return was −2.1% for the quarter and 1.2% for the one-year period.

First National Bank of Elgin, Ill., had two bond funds in the top decile for the quarter and the year ended Sept. 30. The bank's Bond Fund D finished second for the quarter with a return of 1.4% and second for the year at 5.9%. Its D1 fund finished fifth for the quarter with a return of 1.4% and 11th for the 12 months with 5.8%.

The $4 million Fund D is made up of U.S. Treasury instruments only; the $10 million D1 fund contains a mixture of Treasuries and corporate bonds, said William Palmer, trust investment officer.

"We vary the maturity levels in the funds depending on our outlook for interest rates. We have been negative on rates and have been short in both funds. The average maturities were moved to under one year in both funds," said Mr. Palmer. "We moved there aggressively in early 1986."

The defensive bond fund at Hawaiian Trust Co., Honolulu, finished on top for the quarter with a return of 2.2% and second for the 12 months with 8.9%.

William Barton, chief investment officer at Hawaiian, said the $75 million fund contains mostly guaranteed investment contracts and about 15% in short-term cash equivalents.

The fund uses "collapsible" GICs, which can be redeemed on a six-month notice to the insurance carriers.

"The fund is structured to maximize yield as much as possible while reducing volatility . . . We use it as a core in our asset allocation for pension funds," said Mr. Barton.

He said the maximum maturity of any contract in the fund is five years. The fund is actively managed by adjusting maturities "depending on what we see as the most efficient yield." The average maturity of the fund now is 2.5 years, he said.

The other top performing funds for the quarter were Wilmington Trust Co., Wilmington, Del., 1.4%,

# For Every Investor, There's A Perfect Balance Between Risk And Return

There's an element of risk in every investment. And, from one investor to the next, the tolerance for risk varies according to his goals, philosophy and temperament.

At First Union's Capital Management Group, we understand the importance of managing risk as well as maximizing return. Very few investment managers can match our consistency of superior returns at such moderate levels of risk.

To find out more about the investment approach that helps us to strike that perfect balance between risk and return, call Debbie L. Tate at (704) 371-5155 for a copy of our investment management brochure. What the rankings in this P.I.P.E.R. Survey don't tell you about us, this brochure will. Call today. The sooner you get our investment team working for you, the sooner you'll see the results.

# WHAT IF YOU COULD IMPROVE RETURN ON A $500 MILLION PORTFOLIO BY .3 PERCENT?

There is one system—just one—designed to help you realize that kind of potential by changing nothing but your people's access to information.

The system is ISA PRISM. Integrated, on-line, real-time, IBM mainframe-based—PRISM is designed to give financial professionals instant access to the information they need to achieve optimum return.

And it's from ISA—a United Telecom company—whose systems are already helping manage half a trillion dollars on three continents.

If your organization is managing securities without PRISM, you may be settling for a smaller return than you should. Have someone look into it. Call us at 1-800-554-1193. In Georgia, 404-587-6865.

and First National Bank of Neenah, Wis., 1.4%.

A newcomer to the PIPER charts, Sunburst Bank of Jackson, Miss., finished in the top spot for the year ended Sept. 30 with a return of 11%. Sunburst's $1.5 million fund also finished second for the three-year period with 21.2%; third for five years with 16.3%; and in the top decile for the quarter with 0.6%.

"Things worked out for us," said Ashby Foote, chief investment officer at Sunburst.

"Our overall strategy is to look at where inflation is going and the risk-reward (ratios) in fixed-income instruments," he said.

"In the last 12 months or so we have shifted out of medium-term, zero-coupon bonds because we didn't feel the rewards were acceptable and shifted to convertible bonds. That has paid off for us in the last 12 months. We still feel convertibles offer good opportunities although some of the valuations don't look real good at the present time," he said.

For the longer periods, Mr. Foote said, "rather than looking at fiscal and monetary trends, we looked at inflation and felt longer maturities were the best and we could take advantage of the yields because we didn't fear inflation rising at all.

"As bond yields came down in 1986, we were able to generate some good returns. When long bonds were down to 7% to 8%, we felt the risk-reward of convertibles made more sense than long-term bonds. It allowed us to avoid some of the damage which has occurred in the bond market brought on by higher rates," he said.

Coming in third for the year behind Sunburst and Hawaiian Trust was First Alabama Bank, Mobile, with 8.2%.

The mortgage fund of First National Bank, Neenah, finished in the top decile for the quarter and the year with returns of 1.4% and 6.8%.

Neil Braun, vice president and trust investment officer, said the $2.5 million fund is a mortgage-investment fund made up partly of local mortgages and GNMA instruments.

"The fund was started about five years ago with the idea of investing in local mortgages, single-family, owner-occupied properties. Mortgage rates were very attractive at the time and we felt it would also help the community," Mr. Braun said. "We had some trouble getting access to new mortgages and gradually shifted toward GNMA-type instruments as the mortgages were paid off. So the fund is kind of a mixture of those two items."

For the three-, five- and 10-year periods, United Bank of Denver finished in the top spot with compound annualized returns of 21.6%, 18% and 12.6%; the Shearson Lehman Government/Corporate bond index had annualized returns of 13.3%, 12.8% and 9.7% for the same periods, and the median PIPER fund was up 12.7%, 12.1% and 9.4%.

W. Lon Schreur, president and chief investment officer at United Capital Management, Denver, which manages the $35 million fund, said he shortened the average maturity of the fund to nearly 5.5 years in early 1986 from nearly 21 years, where it had been since 1981.

Mr. Schreur said the fund comprises mainly U.S. government securities, primarily direct obligations with some agency issues.

"We think the rally in the bond market is temporary and we're not extending maturities," he said. "We think interest rates will be higher in the next six months than they are today. We don't see any extending of maturities until mid-1988."

Following United of Denver and Sunburst in the three-year period were Centerre Trust Co., St. Louis, with an annualized 18%; Delaware Trust Co., Wilmington, 17.6%; and First Interstate Bank of Denver, 17.2%.

For the five-year period, United Bank of Denver was followed by Delaware Trust, with 16.5%; Sunburst at 16.3%; and First Variable Life Insurance Co., Little Rock, Ark., with a return of 15.8%.

Rebecca Garner, portfolio manager for First Variable, said the $3.5 million fund is conservatively managed, with a heavy weighting in high-yielding corporate bonds. But, she said, spreads between the bonds and U.S. Treasury instruments narrowed in September, resulting in the sale of about 15% of the portfolio.

"The bonds were not sold for credit reasons but for spread reasons," Ms. Gardner said. "The market got too rich and I intend to buy them back at the right time. This is a value-invested fund. I don't buy anything I'm not willing to hold over the long term."

Behind United of Denver in the 10 year period, were Sovran Bank, Richmond, Va., with a compound annualized return of 12.2% and Beverly Trust Co., Chicago, with an annualized 11.8%. ■

## Callan chosen by Georgia fund

ATLANTA — The $160 million Joint Municipal Employees' Retirement System hired Callan Associates Inc., Atlanta, to analyze investment performance and audit transactions, said Bill Avery, an adviser to the fund.

Previously, the fund had Merrill Lynch & Co., New York, do performance evaluation, and did transaction audits in-house. Callen was selected because of feelings it would provide better service. ■

BellSouth

# Stock leaders . . .

*Continued from page 63*

cording to Mr. Clark. Among those were **Loews Corp.**, **ITT Corp.**, **Seagram Co. Ltd.**, **Monsanto Co.**, **Irving Bank Co.** and **United Technologies Corp.**

Mr. Clark said after the recovery of some initial losses, the fund outperformed the S&P during the week of Oct. 19 by 200 basis points.

United of Denver's fund also was the best performer during the one-year period ended Sept. 30, with 61.7%, edging past California First Bank's investment trust equity fund, and Citicorp Investment Management's pooled asset allocation fund.

California First reaped an impressive 58.4% and Citicorp's "stock shift 200" fund was third at 55.7%, just squeaking past First Fidelity's 55.3%.

The S&P index was a difficult bogey to beat for the 12 months, as fewer than 20% of the managers were able to outperform the S&P's 43.5% return. The median fund returned 35.4%.

The California First Bank fund — which was managed by California First Capital Management, La Jolla, Calif., until the subsidiary was sold to its principals and became Wall Street Associates Oct. 1 (*Pensions & Investment Age*, Nov. 2) — is a diversified and actively driven fund with a bias toward blue-chip stocks, according to Edward Nay, a partner of Wall Street Associates. Since the sale, the assets have been moved into California First's trust department.

The fund has had heavy exposures to technology, specialty chemical, pollution control, capital-goods and drug and tobacco stocks. Those areas were favored for their strong earnings growth potential, Mr. Nay said. "The key criteria is earnings momentum."

Some of the best performers were **Georgia-Pacific Corp.** and **Vista Chemical Co.**, which he said had virtually no competition and explosive earnings in the polystyrene and polyurethane manufacturing arena. Mr. Nay expects pollution control stocks such as **Browning-Ferris Industries Inc.** to perform well in upcoming months, as federal waste clean-up funds are allocated in 1988.

But Clyde Power, a vice president of California First and the new manager of the fund, said the portfolio was badly bruised Oct. 19, sustaining losses slightly greater than the S&P, but just prior to the crash his department had moved heavy into cash. He does not expect the fund to change its positions noticeably during this quarter, but there might be a bigger commitment to semiconductor and computer stocks, such as **Motorola Inc.** and **Computer Factory**.

The $30 million Citicorp fund — an index-based market timing fund with a beta range from zero to 2 — performed well during the year because it was positioned well, said Charles DuBois, vice president of Citicorp Investment Management Inc., New York. Mr. Dubois said the fund had a beta of more than 1 during the fourth quarter of 1986 and the first quarter of 1987, which helped it do especially well.

Mr. DuBois said the fund operates like a full discretion asset allocation account, by allowing managers to trade in futures.

During the third quarter, the fund reduced its market exposure to take a more defensive position. The cash position varied from zero to 10%, but increased to 20% heading into Black Monday. The strategy paid off during the last weeks of October, as the fund did not suffer as much loss as the market did. He said the fund bettered the market indexes by roughly 500 basis points at that critical time.

In the long-term performance categories, the $400 million Sun Banks Inc. fund is becoming a fixture among the leaders in both three-year and five-year periods, with compound annualized returns of 44.7% and 38.9%, respectively.

Other top finishers in the three-year period were Puget Sound National Bank, Tacoma, Wash., whose fund returned a compound annualized 33.8%, and IDS Trust Co., Minneapolis, 33%. The funds were among the 20% to beat the S&P's annualized 29.4% return for the three-year period. The median PIPER manager returned 26.4%.

But in the five-year period, only 26 of the 206 funds tracked for that period could beat the S&P's 26.8% compound annualized return. Among those were The Bank of New England, Springfield, Mass., whose Valuepath fund was second only to the Orlando, Fla.-based Sun Bank's fund with an annualized 30.3% annualized return, and First Union Bank, Charlotte, N.C., slightly behind with 29.9%. The median manager returned 23.5%.

For the 10 years, Sun Bank's fund was topped only by the Toronto-based Manufacturers Life fund. Manufacturers Life returned an annualized 25.3% compared with 24.9% for Sun Banks. The Variable Account 1 equity fund of Guardian Insurance Co. of America, New York; and the employee investment fund of Citizens Bank and Trust Co., Chillicothe, Mo., were close behind with annualized returns of 22.7% each for the period.

First Union Bank, Bessemer Trust and United Bank of Denver also were in the top decile for 10-year results, with compound annualized returns of 22%, 21.6%, and 20.7% respectively.

The top 30% of managers running funds with a 10-year history outperformed the 10-year S&P figure of 18.3%, and the median manager returned a compound annualized 17.2%.

Tony Gray, president of Sun Banks Investment Management Group, said the fund stayed competitive in the third quarter by sticking with the same sectors it favored in the second: consumer goods, pharmaceutical and technology stocks.

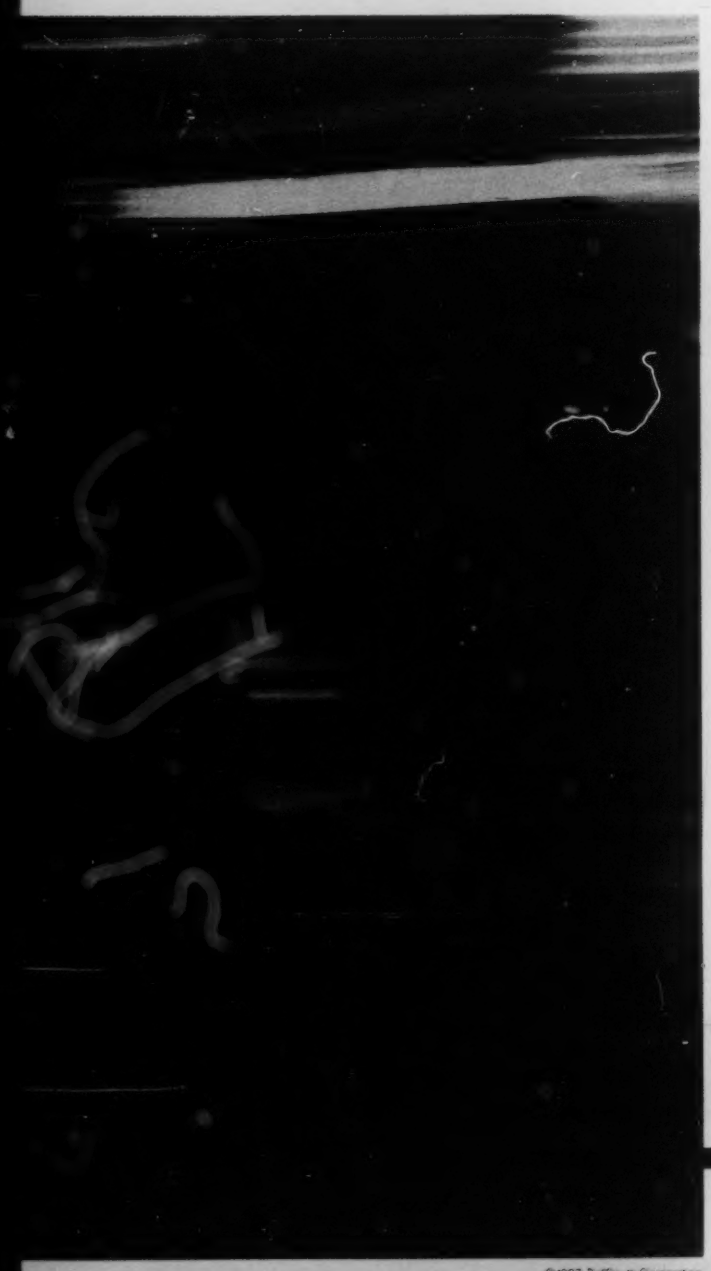
Some additions were made, however, in the energy and machinery sectors. Among the fund's picks in the third quarter were **CPC International Inc.**; **Ralston Purina Co.**; **Quaker Oats Co.**; **Gillette Co.**; **Apple Computer Inc.**; and **Atlantic Richfield Co**.

Mr. Gray said the fund did not do as poorly as the market during the month of October; it outperformed the S&P by three percentage points.

The stocks that fared best in the crash, he said, were **Amoco Corp.**, **Atlantic Richfield,** and **Bristol-Myers Corp.** because of "the feeling that their earnings would hold up even if we were to have a moderate recession."

The hardest hit, he said, were the consumer goods, but that quickly changed. **Johnson & Johnson**, **Kraft Inc.** and **Merck & Co. Inc.** came back strong after sustaining blows on Black Monday and the two days after.

Starting Nov. 2, he said Sun Banks bought transportation stocks, which he said are at bargain prices, even by recession-period standards. ■



IS where the action is.

It's happening now. It's happening fast. It's economic growth and business opportunities. And it's all happening in the nine Southeastern states of the BellSouth region.

In ten years, population will boom at a rate 44% faster than the rest of the nation; new jobs will be created at a rate 20% faster than the national average.

In ten years, there will be over 4 million new housing starts and about 4 million new jobs. Real personal income in the region will rise by 2.9% per year, compared to 2.7% for the nation.

The BellSouth management team is prepared to capitalize on this growth. They're committed to forward-looking business strategies and new technologies. And they're determined to stay ahead of the growing need for state-of-the-art products and services to meet customer needs in an expanding marketplace.

Selective acquisitions are a part of BellSouth's growth plans. BellSouth is already involved in new business opportunities that will lead to even greater revenues nationally and internationally.

BellSouth not only is in the midst of the action but is helping to make it happen.

The BellSouth family of companies provides telecommunications, information systems and publishing services through South Central Bell, Southern Bell, BellSouth Services and BellSouth Enterprises.

# New chapter for 'junk' debt

## Market drop stops new issues

By Brad Rudin

NEW YORK — Deterred by historically high spreads produced by the Oct. 19 stock market crash, most issuers of high-yield securities have shelved their public offerings until rates ease.

"I would think that new-issue volume in the first quarter of 1988 will be restrained because of uncertainty in the stock market," said John A. Frabotta, a vice president in the high-yield bond group at Merrill Lynch Capital Markets, Boston.

New issue volume in 1988 could fall 20% or 30% from the $50 billion volume expected in 1987, he said.

But the high-yield market is fundamentally healthy, said an official in the Beverly Hills, Calif., office of Drexel Burnham Lambert Inc.

"We've heard talk about weak markets," said the official, who did not want to be identified. "But from what we've seen there's always been a steady stream of buyers. There was a day or two when there was some anxiety, but there was never heavy dumping of bonds."

*Mariel C. Clemensen*

Investors, spooked by the specter of recession, embarked on a flight to quality that boosted spreads of high-yield debt.

The Drexel Burnham Lambert composite high-yield spread over the 7% Treasuries of 1994 stood at 556 basis points at the end of October compared to 411 basis points at the end of September.

The spread of high-yield debt to the Merrill Lynch Government Index stood at 373 basis points Oct. 19, 483 basis points Oct. 20 and 499 basis points Oct. 21.

The market's lack of direction also had a chilling effect on investors and issuers, analysts said.

"There's no one view pulling (the market) in any particular way," said Mariel C. Clemensen, director of corporate bond research at Donaldson, Lufkin & Jenrette Securities Corp., New York. "There's basically uncertainty. Anytime you have this much uncertainty, you have inactivity."

Some issuers have sought funding in the private market while the public new-issue high-yield market has been shut down, market participants said.

But in the public markets after Black Monday, the only high-yield new issue was offered by SCI Television Inc., Nashville, Tenn. The company issued $400 million of high-yield debt Oct. 21, just two days after the stock market crash widened high-yield spreads to their highest point in history.

SCI Television is owned by the Gilett Corp., Nashville, and Storer Communications Inc., Miami. Storer is a wholly owned subsidiary of SCI Holdings Inc.; both Storer and SCI Holdings were organized by the New York investment firm of Kohlberg Kravis Roberts & Co. for the ac-

*Continued on page 74*

## Institutional investors still bullish

By Marcia Parker

NEW YORK — Institutional investors, who were exhibiting increased interest in the high-yield market before the stock market crash last month, haven't given up on high-yield bonds even though new public market issues have dried up.

"Small investors have pulled out. That cleans those dollars out of the market . . . and that leaves the long-term players," said a senior high-yield bond trader on Wall Street who wished to remain anonymous.

"Institutional investors aren't running from the market. They are shaken, but what will rekindle their confidence is a stable rising stock market."

Right now, institutional investors are in a flight to quality. They are reviewing their high-yield portfolios, selling the low-quality bonds and keeping the high-quality ones. They're also scouting for the best values available in the market. Some investors and money managers have moved out of the high-yield market temporarily and boosted their cash and Treasury holdings. But they indicated they would return to high-yield bonds when the market stabilized.

Before the Oct. 19 market collapse, interest among institutional investors had been picking up significantly. New players, including foreign investors, a new crop of private and public pension funds, insurance companies, thrifts, foundations and endowments were making their first investments in junk bonds or increasing what had been small initial commitments.

Several Wall Street investment bankers and money managers said they were mak-

# *Ratings agencies eye securitization*

By Marcia Parker

NEW YORK — The major rating agencies are studying more closely the effect on the financial services industry of the growing use of securitized lending as a financing tool.

As more and more financial services firms feel the competitive pressure to securitize at least a portion of their assets, the magnitude of the market has spurred a stepped-up assessment of the risks and implications for the individual issuer's credit health as well as the industry's.

Executives at Moody's Investors Service and Standard & Poor's Corp., the two major rating agencies, said they have been concerned about the effects of securitization on the financial services industry since its advent and have taken those concerns into consideration when they rate the issuers.

But they acknowledge the increased attention can be attributed both to the rapid-fire growth of securitization and heightened interest from potential issuers and underwriters of asset-backed securities, according to Christopher Baldwin, vice president and associate director-structured transactions.

In fact, many issuers and underwriters interviewed by *Pensions & Investment Age* complained they had been getting conflicting signals and views from the agencies.

"A number of potential issuers have received contradictory information on how they would be treated if they were an issuer," said Joseph Donovan, vice president, First Boston Corp.

"I think it has kept some of the issuers out of the market. The rating agencies' analysis has a significant impact on the business."

These players have been pressing the rating agencies for more guidance, mainly about how they view the impact of securitization on the general credit quality of the issuer. The agencies also decided to examine the broader impact on the financial services industry as a whole.

A lengthy special report just released by Moody's goes a long way toward addressing some of the complex issues raised by securitization, issuers and underwriters agree. Clifford Griep, senior vice president at Standard & Poor's, said his agency will be publishing a similar report shortly. The Financial Accounting Standards Board also is looking at issues stemming from securitization as part of its study project on financial instruments.

*Phar-Mor Inc. will be able to expand through a financing agreement with Westinghouse Credit Corp. which allows Phar-Mor to delay incurring interest costs for up to two years.*

# Interest-ing delay

## Phar-Mor credit deal suspends costs

By Brad Rudin

YOUNGSTOWN, Ohio — Under a $50 million financing agreement made with Westinghouse Credit Corp., Pittsburgh, Phar-Mor Inc., the privately held operator of a chain of drug and discount stores, will be able to expand with a credit agreement that allows it to delay incurring interest costs for up to two years.

Phar-Mor will only incur interest costs as it draws down the debt facility during the two-year period. Each increment of the drawdown must be at least $5 million.

The company, which owns 52 stores in 11 states in the Midwest, East and South, is owned by management, members of management's family and outside investors.

In addition to the 10-year senior subordinated notes purchased by Westinghouse, the finance company will receive warrants for the purchase of Phar-Mor stock.

Neither the coupon on the notes nor the number of warrants was disclosed.

"For us it's a reasonable coupon on a current return basis for the transaction," said Bill Harper, vice president in charge of corporate finance at Westinghouse Credit. "Certainly, to the extent that we are willing to look to a good portion of our total return from the upside of the equity, that speaks to our confidence in the business, the management and

# Securitization . . .

*Continued from page 71*

Some issuers and underwriters took issue with Moody's concerns about the risks of securitization. For instance, the report said although one of the perceived attractions of securitization is to reduce balance sheet risk by selling assets, Moody's says that is not happening in many cases. The agency said some securitized structures may be increasing risk through the retention of significant off-balance-sheet residual risks and by a shift in the issuers' asset mix to assets of lower quality.

Most issuers and underwriters said they felt the report fell short of giving them the detailed analysis they desire on how issuers will be treated.

"It does raise issues; it doesn't answer questions," said one investment banker active as issuer and underwriter.

Jay Weintraub, vice president of corporate bond research at Salomon Brothers Inc., said the report raised legitimate issues. But he said asset securitization would have to grow dramatically "before it would be something the credit agencies would really have to be concerned about. Overall, securitization is a good thing."

The use of asset securitization as a financing tool has grown dramatically in recent years. Mortgage-backed securities outstanding exceed $600 billion today, while trading volume last year was well over $2 trillion.

Issuers include commercial banks, investment banks, insurance companies, thrifts, mortgage banks, homebuilders, manufacturers, retailers and finance companies. These institutions have securitized a host of assets to secure debt, ranging from home mortgages to car loans to credit card receivables to corporate loans.

For issuers, the benefits are many, mainly better returns on capital and increased financial flexibility.

Mr. Griep said securitized assets allow direct access to financial markets. As a result, intermediary expenses may be eliminated, which lowers financing costs to borrowers. The successful growth of the $500 billion mortgage security market already has indicated the potential benefits to those issuers. They get to pass on or eliminate credit, interest rate and funding risks associated with balance sheet lending; add balance sheet liquidity, which improves asset management; and diversify credit risk.

Moody's identified six credit impact areas, which issuers and underwriters said would help them understand how the agency analyzes and rates them:

- The extent to which the default risk on the assets sold has been transferred from the originator/seller to the purchaser.
- The extent to which securitized asset sales affect the originator's ability to manage its asset/liability mismatch;
- The degree to which the originator's asset quality deteriorates as a result of securitized asset sales and concurrent reinvestment of proceeds in new assets.
- Whether the issuer has too great a reliance on a single funding vehicle, which may result in increased risk to the originator. That concern is warranted, Moody's said, because there is no certainty the market for publicly rated, asset-backed securities will continue to provide the same degree of depth as it has in the past. As a result, Moody's analysis will focus on the refinancing risk to the originator in terms of its access to the asset-backed securities market being impaired by company-related or exogenous factors.
- Servicing risk, since most securitized asset sales occur with responsibility for servicing the assets retained by the originator. The retention of servicing risk is a residual risk that involves an ongoing use of financial flexibility, the agency said. It considers servicing fees generated by the portfolio, the originator's administrative efficiencies, the ease with which servicing rights may be sold to third parties, and the credit quality of the serviced book of business.
- The degree to which the use of securitized asset sales mitigates the financial constraints that may have contributed in the past to a limit on market share growth. Moody's said it evaluates many aspects of the originator, including competitive environment, regulatory support, and credit quality of the new business the originator is seeking. ●

*This announcement is neither an offer to sell nor a solicitation of an offer to buy any of these Securities. The offer is made only by the Prospectus.*

## $92,621,770

## American Airlines 1987-A Grantor Trusts

### Equipment Note Pass Through Certificates Series 1987-A

## AmericanAirlines

*Each Pass Through Certificate offered by the Prospectus will represent a fractional undivided interest in one of the seven American Airlines 1987-A Grantor Trusts to be formed pursuant to seven separate trust agreements between American Airlines, Inc. and the Connecticut National Bank as trustee under each Trust. The trust property of the Trusts will consist of equipment notes issued on a non-recourse basis by certain owner trustees pursuant to six separate leveraged lease transactions to refinance approximately 80% of the equipment cost of six McDonnell Douglas DC-9-82 aircraft leased to American in 1986.*

*Interest paid on the Equipment Notes held in each Trust will be passed through to the Certificateholders of such Trust on January 1 and July 1 of each year, commencing January 1, 1988, at the rate per annum set forth below for such Trust until the final distribution date for such Trust set forth below. Principal paid on the Equipment Notes held in Trusts 1987-A1 through 1987-A5 will be passed through to the Certificateholders of each such Trust in a single payment on the final distribution date for such Trust set forth below, and principal paid on the Equipment Notes held in Trusts 1987-A6 and 1987-A7 will be passed through to the Certificateholders of each such Trust in scheduled amounts on January 1 and July 1 of each year, commencing July 1, 1992 and January 1, 1998, respectively, until the final distribution date for such Trust set forth below.*

| Pass Through Certificate | Principal Amount | Interest Rate | Final Distribution Date | Price to Public |
|---|---|---|---|---|
| 1987-A1 | $ 3,447,770 | 8.96% | January 1, 1988 | 100% |

# Cosponsored issues fill gap

By Fred Williams

Salomon Brothers Inc.'s withdrawal from the commercial paper market likely will prompt more corporate financial executives to issue cosponsored paper programs with two dealers.

"We didn't hire two dealers with the idea of having a backup, but this strengthens the idea of having two dealers. Today I suppose there also is less confidence that all the investment banking firms will be around five years from now," said A.M. Strecker, vice president and treasurer at Oklahoma Gas & Electric Co., Oklahoma City, which used Salomon Brothers and First Boston.

"It was quite a shock to us," Mr. Strecker said of the New York investment banking firm's decision. "A lot of people are upset about it. Had they been our sole dealer, we would probably have been frustrated."

Donald G. Reid, president of the Ashwell Division of the Chicago Corp., a money market and commercial paper consulting firm, agreed commercial paper clients would be using "a lot more cosponsored commercial paper programs because of the uncertainties in the market now."

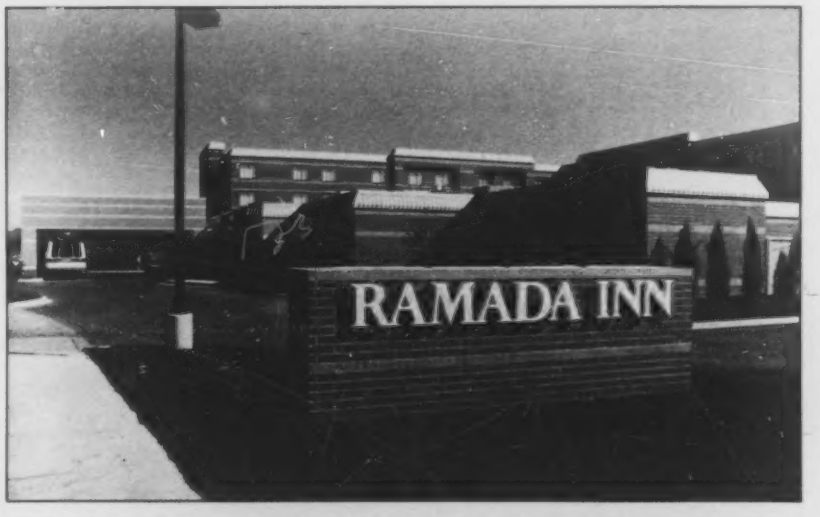
"It puts the corporate treasurer on the horns of a dilemma worrying about who will withdraw from the market . . . Right now co-managed programs are growing at a much greater rate than the single sponsored programs," said Mr. Reid.

Investment banking firms are preparing for the move toward cosponsored issues. Goldman, Sachs & Co., New York, for example, no longer will require being the exclusive dealer before it will agree to sell a client's paper.

Other corporate executives said Salomon's decision caught them off guard, leaving them uncertain about the future.

Salomon's commercial paper clients said they are putting off issues, seeking new issuers or are relying on their other dealers to take over the entire program.

Craig Sullivan, assistant treasurer at Ramada Corp., Phoenix, Ariz., said his company withdrew a proposed a $50 million unrated paper program with Salomon, which it had recently hired, when Salomon's decision was made.



*Ramada Corp. withdrew a proposed $50 million unrated commercial paper issue with Salomon Brothers after Salomon officials announced their firm plans to leave the commercial paper business by year end.*

"We had our legal and (Securities and Exchange Commission) opinions and were within a week to 10 days when they pulled out," he said. "We received no advance word.

"They told us what they were doing, and we weren't aware of their decision to phase out by December or January. That was not part of the offer. In fairness to them, they probably didn't want to take a new program to market even if it were for two months. It would not have been in their or our best interests. They are trying to unwind what they have and didn't want to start something new."

Mr. Sullivan said Salomon has offered to help Ramada connect with another paper dealer "but with unrated paper, that makes it a little tricky for us. An unrated issue takes a Salomon Brothers to put their arm around your shoulder and lead you to the market. When they put their name behind you, it means something.

"We were going to start small at the $50 million level, and take a slow approach to see how well we were accepted and compare the pricing vis a vis under our bank lines and see what the spreads were. We wanted to get our names in the market," said Mr. Sullivan.

He said Ramada will not have to start over again. "We're not quite back to square one yet, but it is more a question now of someone approaching us or us approaching them and taking us to the marketplace," he said.

"They were our sole dealer. We are now

## Notes

## Hospital council hires asset manager

LOS ANGELES — The Hospital Council of Southern California, a non-profit organization of more than 230 health-care facilities, has approved Alan G. Seidner Co., Pasadena, Calif., for use by its members as a short- and medium-term investment manager.

Seidner is a fixed-income asset manager and consulting firm. HCSA approved Seidner for use by member facilities to manage cash surplus accounts as well as bonds, depreciation accounts and endowment funds.

"AGS' management techniques, data analysis and ability to obtain highly competitive execution prices will allow HCSC members to achieve a higher yield than they may presently be getting without increasing risk," said Leon Starr, HCSC vice president-financial affairs. Mr. Starr called the use of an outside investment manager "preventative medicine."

"The lack of highly specialized knowledge and constant involvement required for investing in today's market can result in financial exposure as well as legal exposure. HCSC's appointment of an approved investment management and consulting firm will hopefully protect our members from such exposure," he said.

### USAA Credit rated

NEW YORK — Moody's Investors Service Inc., New York, has rated USAA Credit Corp., San Antonio, Texas, Prime-1 for commercial paper.

USAA Credit Corp. has issued commercial paper only in the United States for the past two years.

Although USAA Credit plans to extend its paper program to the Euromarket, the company will confine the total program to $500 million outstanding, according to Moody's.

The P1 rating is based on a net worth maintenance agreement between the issue and its parent, United Services Automobile Association, which guarantees the

# MDU moves $42 million among five

By Barry B. Burr

BISMARCK, N.D. — MDU Resources Group Inc. reassigned some $42 million in corporate cash among five investment managers, including three running dividend capture programs, said Douglas Mahowald, manager-treasury services.

The energy company hired Paramount Capital Group Inc., New York, and Weiss Asset Management, Hartford, Conn. Paramount was assigned $10 million and Weiss, $11 million, to run in dividend capture programs.

In addition, Mr. Mahowald said MDU assigned $2 million to P.R. Burke & Co., New York, to run in a strategy that buys and simultaneously shorts common stocks in the same industry.

MDU dropped Stovall/Twenty-First Advisers Inc., New York, which had run about $5 million in a similar long-and-short common stock strategy for about a year.

Also, MDU halved the assignment to New York-based Wharton Asset Management Corp.'s dividend capture program to $3.5 million.

Mr. Mahowald said MDU has virtually all its corporate cash, now about $70 million, with outside managers. It runs about $1 million in-house in cash equivalents, he added.

He said the company made the changes to adjust its allocation to different strategies, declining to be more specific.

According to Mr. Mahowald and Geoffrey S. Bradshaw-Mack, Paramount vice president, Paramount buys industrial common stocks with dividend yields of at least 5% as part of its dividend capture strategy.

At the same time, Paramount sells deep-in-the-money call options on the individual stocks to earn a premium and hedge against declines of particular stocks. In a deep-in-the-money call, an option's exercise price is below the current market price of the particular stock.

Mr. Bradshaw-Mack said Paramount will sell the deepest-in-the-money calls allowable to still qualify dividends for the 80% corporate income tax exclusion. He said that means calls having exercise prices one or two strike prices below the current market price.

In addition, he said Paramount buys put options, primarily on the Standard & Poor's 100 stock index, to protect against overall market drops. Sometimes Paramount will buy put options on the major market index, which tracks the Dow Jones industrial average, he added.

Weiss, in its dividend capture program, buys common stocks of electric utilities and regional telephone companies while it hedges by shorting common stocks of other companies in the same industries, explained George Weiss, principal.

Burke's strategy involves buying the strongest common stocks in any particular industries, while

# Statistically speaking

# Industrials top 3rd quarter stocks

By Trudy Ring

Basic industry stocks performed best in the third quarter, with a 10.1% price gain while the Standard & Poor's 500 stock index gained 5.8%, according to DeMarche Associates.

In the bond market, financial issues had the best return even though their prices declined 1.4%. The market, as measured by the DeMarche Pension Fund Bond Index of 6,000 issues, was down 2.5%.

Basic industry stocks' performance in the quarter boosted them to first place for the nine- and 12-month periods ended Sept. 30, with gains of 44.1% and 52.9% respectively. The S&P 500 was up 32.9% for the first three quarters of 1987 and 38.7% for the year ended Sept. 30.

The stock performance figures exclude dividends, while the bond figures are total return.

The basic industry sector includes companies in the automotive, building material, chemical, electrical equipment, metal and transportation industries.

The technology sector had the second best return for the quarter, 6.2%. For the first three quarters, it was up 40%; for the year, 46%. The sector consists of companies in the aerospace, drug, electronics and office equipment industries.

The consumer spending sector ranked third in the quarter, slightly underperforming the market at 5.6%. For the year-to-date and 12-month periods, it gained 36.2% and 43.2% respectively. This sector includes the household goods, food and beverage, tobacco, media, textile and retail industries.

Stocks sensitive to interest rates gained 4.7% in the quarter. For the nine- and 12-month periods, this sector was up 9.5% and 12% respectively. The sector includes banks, savings and loans, insurance companies and large gas, electric and telephone utilities.

Energy stocks had the worst performance of the quarter, declining 1.4%. For the first three quarters, the sector gained 34.9%; for the year ended Sept. 30, 40.6%. Domestic and international oil companies and oil service and equipment companies are in this sector.

The quarter's 10 best-performing industries were miscelianeous metals and minerals, up 39.7%; tobacco, up 27.6%; aluminum and copper, up 21.2%; general machinery, up 21.1%; steel, up 19.8%; electronics, up 16.5%; telephone, up 13.3%; electrical equipment, up 12.9%; consumer non-durables and building materials, both up 12%.

The 10 worst-performing industries were textiles, down 8.9%; banks, down 4.5%; electric utilities, down 3.4%; domestic oil, down 2.1%; international oil, down 1.3%; air transportation, down 1.1%; retail, up 0.1%; lodging and restaurants and food packaging and processing, both up 0.6%; and office equipment, up 1%.

The 10 best-performing individual stocks were **Newmont Mining Corp.**, up 108.9%; **FMC Corp.**, up 58.6%; **Tracor Inc.**, up 58%; **CNW Corp.**, up 57.5%; **First Mississippi Corp.**, up 56.4%; **Reynolds Metals Co.**, up 55.8%; **G. Heileman Brewing Co.**, up 52.6%; **USG Corp.**, up 48.9%; **Phelps Dodge Corp.**, up 47.7%; and **Singer Co.**, up 47%. Seven of the 10 are in the basic industry sector; the exceptions are Heileman and Singer, both consumer spending, and Tracor, technology.

DeMarche also analyzes the stock market by issues' quality, growth and yield, dividing stocks into four groups for each characteristic. As ranked by quality, below-average stocks performed best in the quarter, rising 9.2%. As rated by growth, stocks with moderate, stable growth did best, gaining 6.8%. As ranked by yield, stocks in the two lower yield quartiles performed best, rising 9% in price.

The bond market had its second consecutive negative quarter, after 11 straight quarters of positive returns. For the year ended Sept. 30, the DeMarche bond index gained 2.1%; for the past nine months, it decreased 2.3%.

Financial issues, the best performers in the quarter, also ranked first for the nine-month period, when they were down 0.4%, and the year, when they gained 3.6%.

Yankee and foreign issues ranked second in the quarter, down 1.7%. They declined 0.7% for the first three quarters of 1987 and gained 3.5% for the year ended Sept. 30.

Industrial bond issues declined 2.1% in the quarter and 1.2% in the nine months. They returned 3.1% for the year. U.S. government bonds were down 2.6% in the quarter and 2.5% in the nine months, while gaining 1.2% for the year.

Utility bonds declined 3.5% in the quarter and 3.9% in the nine months; they gained 1.4% for the year. Canadian issues were down 4.4% in the quarter and 5% for the nine months, while gaining 0.1% for the year.

Telephone bonds ranked last in all periods, declining 4.6% for the quarter, 6.5% for the nine months and 0.8% for the year.

As ranked by quality, issues rated BAA and lower had the best relative return for the quarter, declining 1.8%. As ranked by maturity, bonds with maturities of one to five years did best, gaining 0.1%. As ranked by quality and maturity combined, BAA rated bonds with maturities of one to five years did best, gaining 0.5%.

As categorized by coupon rates, bonds with low coupons — in the 0 to 2.9% range — had the best total return, 1.5%.

# GIC rates up sharply in September

By Fred Williams

Rates on insurance company guaranteed investment contracts moved substantially higher during the third quarter, with double-digit yields available on some five-year contracts.

GIC rates jumped as much as 60 basis points in September causing the yield curve to steepen on some longer-term contracts.

"The yield curve took some interesting shifts" in the third quarter, said Peter Bowles, principal with the GIC management firm of Fiduciary Capital Management Inc., Woodbury, Conn. "Rates were 65 to 85 basis points higher at the end of the quarter than at the beginning for various contracts depending on maturities."

For example, he said, the spread between a three- and a five-year simple-interest contract increased to 135 basis points at the end of September from 88 basis points at the beginning of the quarter.

The spread between three- and five-year medium-term contracts remained essentially flat. For five- and seven-year contracts, the yield spread increased to 30 points in September from 19 basis points at the beginning of the quarter.

"All this says is that the yield curve became more steep during the quarter and you got paid more for going longer," said Mr. Bowles.

Most brokers and managers said recent stock market volatility, including the 508-point drop Oct. 19, has created volatility in the fixed-income areas as well.

Mr. Bowles said violent swings in the stock market have created "more volatility than I have ever seen in the GIC market." He cited one insurance carrier that dropped its quoted rates 130 basis points one day and then increased the rate 50 basis points the next.

"There have also been a lot of placements that were scheduled which are being postponed because of the volatility in rates," he said.

David Rubin, senior director at the Beverly Hills, Calif., investment banking firm of Chambers, Dunhill, Rubin & Co., said he has seen substantial sums of money flowing to GICs by corporations trying to lock in the higher rates.

During September, he said, spreads by GICs over Treasury bills of similar maturities became "weaker and weaker; September was just awful." Spreads on a three-year contract were about 55 to 75 basis points over Treasuries, he said.

David Perry, president of Certus Financial Corp., a GIC management firm in San Francisco, said while spreads have narrowed, nominal yields on GICs are near two-year highs.

"If you subscribe to the theory that when spreads are high GICs are undervalued, you wouldn't be buying contracts now," he said. "But if you look at the nominal yields, which are higher than they have been in two years, GICs merit a lot of consideration . . . Spreads are important but it is not necessarily the only consideration."

John Knight, president of Lamberson Knight GIC Inc., Short Hills, N.J., said the narrowing spreads are partially because of insurers reaching their capacities. Third-quarter GIC activity was "fairly boring," he said.

Mr. Knight said following the 508-point decline in the market Oct. 19, about 90% of insurance companies were not even bothering to quote GIC rates, with short-term interest rates fluctuating as much as 200 basis points in one day.

He said the companies were waiting for market conditions and interest rates to stabilize because, with yields being driven down, "the companies had no place to go to cover themselves" on the investment side.

Lamberson Knight and GIC Inc., Beaverton, Ore., both provide rate quotations from insurance companies. Representative rates on five-year, single-deposit, simple-interest, $1 million GICs were as follows:

- Aetna Life & Casualty Co., Hartford, Conn., 9.41%, Sept. 30; and 8.19%, June 30.
- Allstate Life Insurance Cos., Northbrook, Ill., 9.71%, 8.56%.
- American United Life Insurance Co., Indianapolis, 9.34%, 8.31%.
- Bankers Life Assurance Co., Des Moines, Iowa, 9.05%, 8.22%.
- Canada Life Assurance Co., Toronto, 9.85%, 9.01%.
- CNA Insurance Co., Chicago, 9.44%, 8.79%.
- Confederation Life Insurance Co., Toronto, 9.69%, 8.95%.
- Connecticut Mutual Life Insurance Co., Hartford, 9.56%, 8.72%.
- Crown Life Insurance Co., Toronto, 9.71%, 8.77%.
- General American Life Insurance Co., St. Louis, 9.66%, 8.61%.
- Great West Life Assurance Co., Denver, 9.61%, 8.73%.
- Hartford Insurance Group, Hartford, Conn., 9.76%, 8.75%.
- Home Life Insurance Co., New York, 9.56%, 8.66%.
- John Hancock Mutual Life Insurance Co., Boston, 9.43%, 8.5%.
- Life Insurance Co. of Georgia, Atlanta, 9.4%, 8.85%.
- Life Insurance Co. of Virginia, Richmond, 9.53%, 8.72%.
- Lincoln National Life Insurance Co., Fort Wayne, Ind., 9.73%, 8.64%.
- Massachusetts Mutual Life Insurance Co., Springfield, 9.64%, 8.07%.
- Minnesota Mutual Life Insurance Co., St. Paul, 9.94%, no quote.
- Mutual Benefit Life Insurance Co., Newark, N.J., 9.7%, 8.58%.
- Mutual of New York, New York, 9.56%, 8.52%.
- New England Mutual Life Insurance Co., Boston, 9.51%, 8.3%.
- New York Life Insurance Co., New York, 9.75%, 8.9%.
- Northwestern National Life Insurance Co., Minneapolis, 9.65%, 8.85%.
- Ohio National Life Insurance Co., Cincinnati, 9.77%, 8.97%.
- Pacific Mutual Life Insurance Co., Newport Beach, Calif., 9.46%, 8.2%.
- Pan American Life Insurance Co., New Orleans, 9.74%, 8.94%.
- Penn Mutual Life Insurance Co., Philadelphia, 9.87%, 8.92%.
- Phoenix Mutual Life Insurance Co., Hartford, Conn., 9.74%, 8.76%.
- Provident Mutual Life Insurance Co., Philadelphia, 9.46%, 8.52%.
- Provident National Assurance Co., Chattanooga, Tenn., 9.57%, 8.58%.
- SAFECO Corp., Seattle, 9.6%, 9.27%.
- Southwestern Life Insurance Co., Dallas, 10.1%, 8.93%.
- State Mutual of America, Worchester, Mass., 9.6%, 8.45%.
- Union Central Life Insurance Co., Cincinnati, 9.88%, 8.81%.

William M. Mercer-Meidinger-Hansen Asset Planning, Dallas, also surveys insurance companies for rate quotations but does not identify them by name. A summary of various bullet GICs for September is as follows:

- Three-year, $1 million, compound: high, 9.31%; low, 7.8%; average, 8.75%.
- Three-year, $1 million, simple: high, 9.35%; low, 7.77%; average, 8.73%.
- Five-year, $1 million, compound: high, 10.06%; low, 8.15%; average, 9.43%.
- Five-year, $1 million, simple: high, 10.06%; low, 8.15%; average, 9.24%.
- Seven-year, $1 million, compound: high, 10.4%, low, 8.82%; average, 9.77%.
- Seven-year, $1 million, simple: high, 10.4%; low, 8.81%; average, 9.67%.
- Three-year, $5 million, compound: high, 9.46%; low, 8.07%; average, 8.83%.
- Three-year, $5 million, simple: high, 9.41%; low, 7.86%; average, 8.78%.
- Five-year, $5 million, compound: high, 9.94%; low, 8.55%; average, 9.53%.
- Five-year, $5 million, simple: high, 9.91%; low, 8.44%; average, 9.42%.
- Seven-year, $5 million, compound: high, 10.34%; low, 7.86%; average, 9.86%.
- Seven-year, $5 million, simple: high, 10.32%; low, 8.86%; average, 9.73%.
- Three-year, $10 million, compound: high, 9.5%; low, 7.91%; average, 8.86%.
- Three-year, $10 million, simple: high, 9.45%; low, 7.89%; average, 8.81%.
- Five-year, $10 million, compound: high, 10%; low, 8.51%; average, 9.56%.
- Five-year, $10 million, simple: high, 9.85%; low, 8.46%; average, 9.43%.
- Seven-year, $10 million, compound: high, 10.45%; low, 8.87%; average, 9.86%.
- Seven-year, $10 million, simple: high, 10.34%; low, 8.88%; average, 9.73%.

# Earnings . . .

*Continued from page 2*

third-quarter results that lagged their performance in the same period last year.

In addition to Morgan Stanley, First Boston Inc. and Merrill Lynch & Co. produced third-quarter numbers that exceeded their performance in the third quarter of 1986.

"It was an OK quarter, but not a barn burner," Ms. McCoy said.

Morgan Stanley posted earnings per share of $2.82, an 80% increase from the $1.57 earned in the third quarter of 1986.

Officials of the brokerage firm, in a prepared statement, attributed the strong performance to a high level of activity in mergers and acquisitions, restructuring and underwriting. The firm's "equity and fixed-income sales and trading businesses performed well in the face of market conditions that were often difficult during the quarter," according to S. Parker Gilbert, chairman, and Richard B. Fisher, president.

"They really seem to be in step in all lines of their business," said Drexel's Mr. Keefe. "They are really very, very solid."

Morgan Stanley's earnings exceeded the estimate of First Boston's research unit, which had been expecting earnings of $2 to $2.30.

Michael W. Blumstein, the brokerage analyst at First Boston, said in a recent report that Morgan Stanley generated a record $262 million in revenue from its investment banking operation — merger and acquisitions and underwriting.

Despite Morgan Stanley's strong performance in the first three quarters, Mr. Blumstein said he is reducing his 1987 earnings estimate to $9 from $9.25: "This implies a fourth quarter of only $1.25, but we think caution is called for now."

Mr. Blumstein said a slowdown in underwriting and mergers and acquisitions activity were the source of his concern.

For Salomon, however, the future seems more troubled. Earnings per share tumbled to 18 cents from 82 cents in the third quarter of 1986 even though revenue slipped only slightly.

"Decreased revenue, combined with higher costs resulting from past expansion, in turn reduced profits," Salomon Chairman John Gutfreund said in a statement.

The firm plans to reduce annual operating costs by $150 million, partly through work force reductions, Mr. Gutfreund added.

Mr. Blumstein offered a guarded view of Salomon's restructuring plans, saying in his report "a turnaround is not just around the corner, particularly given the difficult market environment . . . for some time to come."

Although Merrill Lynch's earnings increased dramatically from the third quarter of 1986, much of the results can be attributed to a pretax gain of $122.6 million from the firm's sale of its partnership interest in the South Tower of the World Financial Center in Manhattan.

Without the sale, earnings would have stood at 86 cents rather than the $1.72 reported, said Stephen J. Schwartz, the brokerage analyst at Shearson Lehman Brothers Inc.

Merrill Lynch reported earnings of 86 cents for third quarter 1986. ■

# SEC issues rule

WASHINGTON — Investment advisers must disclose to clients disciplinary action and financial problems, according to a Securities and Exchange Commission rule that codifies prior court rulings and administrative decisions on the subject.

The rule, which was introduced more than a year ago and adopted with modifications recently, requires investment advisers to disclose actions taken against them within the past 10 years by courts, government agencies and self-regulating entities such as the New York Stock Exchange.

The rule will take effect 60 days after publication in the Federal Register, which likely means an effective date in December, said Thomas S. Harman, who heads the SEC's Office of Disclosure and Adviser Regulation.

It also requires investment advisers to disclose financial conditions that could reasonably prevent them from fulfilling their obligations to clients.

These disclosures, part of Rule 206(4)-4 under the Investment Advisers Act of 1940, can be made orally or in writing, Mr. Harman said. If the disclosures are made orally, the investment adviser bears the burden of establishing the communication was made.

The SEC proposed the rule to emphasize the disclosure requirement found in case law, he said, explaining codification of court precedent gives the disclosure requirement greater visibility. "We don't think that the rule establishes a new point of law."

Non-compliance with the requirement has been a concern to SEC regional offices around the country, Mr. Harman said.

In its cost benefit analysis of the rule, the SEC said enforcement costs "could decrease because codifying the standard should increase compliance."

The SEC can secure compliance with the rule by filing civil suits or criminal complaints. Conviction on a criminal charge of nondisclosure carries a maximum fine of $10,000 and a prison term of not more than five years, Mr. Harman said. ■

### Positions Available

**Corporate Manager, Employee Benefits**

***3200 Very Important People Will Benefit From Your Human Resources Expertise...***

*The employees of Reckitt & Colman. We manufacture and market leading consumer products including French's Mustard, Binaca, Magic Mushroom and Durkee's Spices. Recent acquisitions have created an opportunity for a Corporate Manager of Employee Benefits.*

*Reporting to the Vice President of Human Resources, you will be responsible for the design, implementation, administration and communication of all U.S. employee benefits programs. You will also ensure that all the Corporation's benefit plans meet legal and regulatory requirements, are cost-effective and meet the needs of all levels of personnel.*

*You will need a college degree and 8+ years' progressive experience in Benefits Administration, including plan design. In-depth pension management experience is also essential, as is a background in GIC negotiations, a thorough knowledge of ERISA reporting and disclosure requirements.*

*Reckitt & Colman's operations are thriving and present excellent Human Resources challenges. We offer a salary commensurate with experience, comprehensive benefits and career growth potential. Please send your resume, including salary history and requirements, to: Blanche P. Cordero, 111 Commerce Road, Carlstadt, NJ 07072.*

*We are an equal opportunity employer.*

### Positions Available

Banking

**Master Trust Administrator**

...wanted at First Pennsylvania Bank

- The nation's oldest commercial bank with a 200- year history of leadership
- Excellent salary scale commensurate with experience; modern, extensive benefits package
- Opportunity for growth and advancement; most promotions from within.

We are seeking a senior-level employee benefit plan administrator with extensive knowledge of ERISA with emphasis on administration of large, complex master trust relationships. BA in Accounting or Finance with 7 to 10 years EBP administrative experience is required. MBA and/or CEBS preferred.

• Qualified applicants should send a resume, with salary history/requirements, to: **Human Resources Dept., FIRST PENNSYLVANIA BANK, 16th & Market Sts., Phila., PA 19101. Attn: Donna Belluchie.** EOE M/F.

First Pennsylvania Bank

*We hear you.*

### Positions Available

**MERGER/ACQUISITION SPECIALIST**

Chairman of publicly owned health care company is seeking an experienced and agressive individual to assist him in acquisitions and business development. MBA and experience is required. Excellent opportunity. Respond to:

**Chairman**
**Continental Health Affiliates**
**900 Sylvan Avenue**
**Englewood Cliffs, NJ 07632**

**BENEFIT ADMINISTRATION SERVICES NEEDED:** The Pension Benefit Guaranty Corporation is seeking a contractor to provide benefit administration services. Job will entail reviewing 20,000+ files, preparation of files for actuarial and benefit payment use. Working knowledge of Title IV of ERISA is required. On-site facilities provided. Proposal information may be obtained by requesting RFP-88-01. Send request to: **Pension Benefit Guaranty Corporation, 2020 K Street, NW, Room 4320, Code 37200, Washington, DC 20006.** Requests must be received by the PBGC no later than November 30, 1987.

**INVESTMENT CONSULTANT:** Small, growing investment consulting firm seeks experienced professional for participation in management and all aspects of the company's activities. Growth opportunity with equity potential. Desirable NJ suburb. Send letter or resume to: **Box 666, Pensions & Investment, 220 E. 42nd St., New York NY 10017.**

### Situation Wanted

**Seasoned Mgr.** of conservative $300M mutual fund seeks institutional position. Excellent track record & extensive prior experience as Healthcare Analyst, Generalist & Advisory Account Mgr. Ivy League Education. Respond to: **P&I Age, Box 664, Pensions & Investment Age, 220 E 42nd St., NY NY 10017.**

# 100 eyed for proxy action

By Marcia Parker

A handful of major institutional investors led by the $31.5 billion New York State Common Retirement Fund are sponsoring shareholder resolutions for the 1988 proxy season, calling on more than 100 companies to withdraw from South Africa.

Meanwhile, New York State Comptroller Edward V. Regan, who is responsible for the New York State fund, who has waged the biggest South Africa shareholder resolution campaign, criticized the divestment drive that other funds have pursued. He accused them of sustaining significant losses at the expense of pensioners and taxpayers by selling stock in portfolio companies, and questioned whether they are carrying out their fiduciary responsibilities under the law.

"The selling of shares from a large portfolio is costly. The New Jersey state pension fund divested of $3.4 billion of assets at a cost of $26.1 million in transaction costs and $25 million annually in lost investment opportunities," he said.

"Such a churning of the portfolio is not conducive to strong returns on investment. What legislature would approve these expenditures if they were included in a state budget as line items?"

(Roland M. Machold, director of the New Jersey Division of Investment, said the $25 million in opportunity cost was en early estimate; he believes the true cost is "considerably in excess" of that figure.)

Mr. Regan also charged there is little evidence that selling stock has any impact on South Africa's policy of apartheid.

"Since there must be a willing buyer, there is no inducement for the corporation to leave

# Dump stocks, funds told

By Chuck Paustian

Executives of Wall Street investment banking firms are going over the heads of corporate pension executives, urging chief executives and chief financial officers to sell stocks from the pension portfolios.

Those efforts apparently fueled decisions by such companies such as Rockwell International Corp., Pittsburgh, and Primark Corp., Detroit, to, reportedly, sell all stocks held by their pension funds.

Although officials of neither company would return phone calls, one Rockwell money manager, who asked not to be identified, said the company has instructed its equity managers to sell all the stocks in their portfolios. *Pensions & Investment Age* estimates Rockwell had about $7.1 billion in pension assets as of Sept. 30.

Some observers also speculated investment banking firms were behind Seattle-based Boeing Co.'s move to reduce the equity exposure of its $5 billion pension fund. But Gary Bland, vice president-trust investments and investor relations, denied the assertions, saying the move was not induced by an outside firm, but was part of a normal review.

Mr. Bland added the move was not related to Financial Accounting Standards Board Statement 87, which he called a short-term consideration.

Other pension executives agreed that investment strategies related to FASB 87 change the focus to short-term considerations of plan sponsors from long-term interests of plan participants.

"There's no doubt the leading proponents of (FASB 87 strategies) live on Wall Street," said Keith P. Ambachtsheer, president of Keith P. Ambachtsheer & Associates, a pension consulting firm in Toronto. Such strategies emphasize the present value of accumulated benefits rather than the on-going liabilities of the fund, he said.

"The accountants have given Wall Street an entry to make hay of that anomaly," he added.

Still, Wall Street strategists are taking their arguments directly to top executives because they tend to be more sensitive than pension executives to matters concerning reported earnings.

Persuading corporate executives to sell stocks and invest in less volatile bond-based strategies would generate significant business for the investment banking firms doing the persuading.

Industry sources said executives of firms such as Salomon Brothers Inc., Goldman, Sachs & Co., The First Boston Corp. and Morgan Stanley & Co. Inc., all of New York, are warning of the potential impact of fluctuating pension asset values on reported earnings because of FASB Statement 87.

The Wall Street strategists also use the opportunity to demonstrate how various strategies, such as immunized bond portfolios, can smooth the pension volatility

# Markets, critics foil British Coal

By Joel Chernoff and Holly Smith

Critical investor reaction and falling markets foiled plans by British Coal Corp.'s pension fund to sell shares in Pan-American Properties Inc., its $508 million New York real estate investment trust.

The initial public offering, withdrawn following the Oct. 19 stock market crash, was sharply criticized by some investors and analysts. Some complained the yield was too low for a REIT without a record of public management; some mentioned problems with the management arrangements; and others said the preliminary prospectus failed to make adequate disclosure on some of the properties in the trust.

David Prosser, chief executive of CIN Management Ltd., which manages the London-based British Coal fund, said, "I can't see us going public (with the REIT) in the next six months. There has been a very sharp change of confidence in the equity market. It's like an eggshell that's been stepped on. It will take time to put together again."

The sale was designed to

# Insurers reach GIC limits

By Fred Williams

Several insurers already have reached their 1987 capacity in GICs, and some could withdraw entirely from the market in 1988.

Although many insurance companies commonly reach their limits for taking in guaranteed investment contract money by late December, the crunch hit by October this year, thanks to interest rate jitters, narrowing spreads over competing investments and the growing inflow of cash from 401(k) plans.

Capacity problems are expected to worsen next year. Even more money is expected to flow into GICs, yet industry sources predict about a half dozen insurers will drop out of the market because it's not profitable enough.

State insurance commissions establish maximum reserve requirements for insurance companies in the GIC business. If the returns on GICs are more than the contribution rates, the companies must set aside excess reserves over the amount they take in from GIC investors. This causes strain on the insurance company in the year the GIC is written.

GIC brokers and analysts say the larger mutual benefit life insurance companies have been operating on a narrower capital and surplus basis because they can be taxed on these reserves.

Industry sources say the insurance companies at or approaching capacity for 1987 include Allstate Life Insurance Cos., Northbrook Ill.; General American Life Insurance Co., St. Louis; Sun Life (U.S.), Wellesley, Mass.; The New England Co., Boston; Northwestern National Life Insurance Co., Minneapolis; and Mutual Benefit Life Insurance Co., Newark.

GIC brokers are quick to point out, however, that insurance companies that have effectively priced themselves out of the market would dive back in if interest rates were to drop noticeably.

Some expect carriers that provide window contracts, which accept cash for a specified period of time at a rate locked in at the beginning of the period and are most often used in 401(k) plans, will be hardest hit.

Window contracts are exposed to interest rate changes for a longer time than bullet contracts, and cash flow varies by month and in accordance with other market activities, said Michael Kristopik, assistant vice president at Frank B. Hall Consulting Co., Detroit.

"In my estimation we won't lose players, but we will lose some of the window players because of the variability of cash flow," he said.

Most insurers are having trouble finding safe harbors for the GIC money being placed with them. (Insurance companies make their money by reinvesting GIC assets at a premium. Usually, they attempt to match the investments by maturity or duration to protect themselves.)

Said Rob Schaefer, vice president of the Blue Bell, Pa., GIC broker Dietrich & Associates: "There is a lot of uncertainty. The story we are getting is insurance companies are having problems finding good investment-grade investments on the other side. Yes, we see some getting out next year . . . some of the marginal players may find the risk of being in does not justify the investment," said Mr. Schaefer.

"Insurance companies have been able to generate assets, but they are concerned about the liquidity of the assets they are purchasing on the other side," said David Rubin, principal with Chambers, Dunhill, Rubin & Co., an investment banking firm in Beverly Hills, Calif.

"They are finding it very difficult to make money in this market. The competition is strong, and spreads are very poor. Many of the larger carriers have already reached their capacity and are not doing any new business this year.

"The big companies will remain if just for market presence in order to continue serving their client base."

As an alternative to insurance company GICs, Mr. Rubin's firm has placed $40 million in bank guaranteed fixed-income contract, a strategy other firms — including Certus Financial Corp., San Francisco — are considering.

"We are creating a different market with different players, not insurance companies, with organizations like banks. Bank guaranteed instruments can be priced more competitively and will come with FDIC insurance as an added benefit," Mr. Rubin said.

"We think the emergence of banks and bank investment contracts will increase, rather than decrease, the number of companies (primarily large commercial banks) providing products," said David Perry, president of Certus.

"We agree there will be some insurance company pullback and they will begin picking their spots a little more carefully," he said.

Strong cash flow from the the growing 401(k) market has exacerbated the capacity problem for insurers.

Insurance companies reached their capacity earlier than usual because 65% to 70% of 401(k) plan assets have been allocated to GICs, said Gene Gochenour, president of GIC Inc., Beaverton, Ore.

He agrees several insurers will leave the business next year. "The market has become too competitive for them, and spreads got too close (GICs are usually compared against Treasury instruments of the same maturity). People were used to spreads of up to 150 basis points and then spreads got down to 30-80 basis points."

Mr. Gochenour said most major insurance companies now are quoting rates well below the top rate on a five-year, $1 million bullet contract, which was 9.41% for GICs and 8.3% on a five-year Treasury bill as of Nov. 20. Jumbo insurers were quoting rates in the 8.35%-8.9% range.

Mr. Gochenour said GICs also could become more popular as a result of Financial Accounting Standards Board requirements that pension gains and losses be reflected on corporate financial statements.

"The bust in the equity market puts many plans closer to their funding requirements after being overfunded before the drop in the equity market. No one wants to show that on their statements, and, as a result . . . defined benefit plans will move more assets into GICs," Mr. Gochenour said.

"If that happens, then we will be facing a major capacity problem next year."

*Continued on page 64*

*A trust fund to pay benefits in the event of a shutdown at this and other steel plants is opposed by the Reagan Administration, which has compromised on the industry's unfunded pension liabilities.*

# Reagan balks on steel trust

By Nicky Robertshaw

WASHINGTON — The Reagan administration has compromised on the handling of the steel industry's $5.3 billion in unfunded liabilities, but still opposes a trust fund to pay benefits stemming from plant shutdowns.

The administration has accepted the concept of a special transition rule in new minimum funding standards that would allow the steel industry five years to adapt to the new standards. But the administration still is not willing to accept the trust fund concept.

This leaves the administration squared off against industry representatives, unions and some legislators on how the pension liabilities should be handled.

At a Senate Labor subcommittee hearing Nov. 20, Sens. John Heinz, R-Pa., and Howard Metzenbaum, D-Ohio, along with other lawmakers and broad labor and industry support, introduced legislation to set up a special trust backed by steel assets — and ultimately the federal government — to pay the shutdown benefits.

Those shutdown benefits account for about $3 billion, which is about half of the unfunded liability for the six largest steel companies, according to a congressional source.

The overall pension bill is still in play as part of the budget reconciliation process. Congress begins work this week on a reconciliation package to replace the Gramm-Rudman-Hollings Deficit Reduction Act automatic spending cuts that kicked in Nov. 20.

Sources familiar with the process believe the four pension reform bills approved by labor and tax-writing committees of both houses will be merged into a single bill by Dec. 16, when a continuing resolution to fund the federal government at fiscal 1987 levels runs out.

Under a special transition rule

*Continued on page 62*

# Fee increases won't fly

By Brad Rudin

The end of the bull market will make it difficult for investment managers to raise their fees, pension executives and consultants believe, though the decline in the market value of assets cut fee income substantially.

Money managers felt little pressure to increase fees last year because the bull market rewarded them with more assets, according to an SEI Corp. report that details the small upward move in the level of fees between 1985 and 1986.

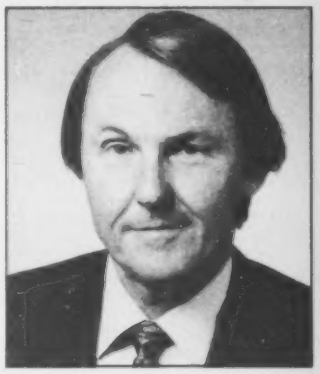
Because of the bull market, "investment firms have been able to increase revenue without adding accounts or raising fees," the SEI report said.

But now that the bull market is over, industry participants say, fees will be held down by plan sponsors' reluctance to pay more for less results.

Money managers will have less leverage on fees as the bear market continues. Equity managers, in particular, could find themselves increasingly vulnerable to a downward pressure on fees if pension funds flee the stock market for alternative investments.

Scrutiny of management fees has roots that go well beyond the October stock market plunge, said Robert E. Shultz, vice president of pension asset management at RJR Nabisco Inc., Atlanta.

Pension executives are taking a hard look at the relationship between management fees and value added by active management, said Mr. Shultz, who is the newly elected president of the National Investment Sponsor Federation, an organization of pension plan sponsors. "If somebody is charging 50 basis points and adding 50 basis points, you have not achieved an active management gain."



*Robert Shultz of RJR Nabisco says pension executives are scrutinizing managers' fees.*

"I would be very hesitant to pay any increase now," said Edwin J. Ehrlich, director of pension fund

# Cash Management

# NCCMA format phased in

By Fred Williams

ATLANTA — Only a few cash management banks soon will offer corporations the option of receiving their monthly account analysis statements in the standard format approved by the National Corporate Cash Management Association, the outgoing chairman of the NCCMA standards committee predicts.

Ware Grove, assistant treasurer and director of banking and finance at Manville Corp., Denver, said now that the standard account analysis form has been approved and released for use, many banks might look to phasing in the standard. He said some banks might accept portions of the standard form initially and implement the remainder over time.

Of the few, Chemical Bank, New York, already has announced it has adopted the NCCMA standard account analysis format and will begin offering it to corporate clients immediately.

The standard will provide a uniform format for presenting account analysis statements — an itemized, usually monthly, listing of cash management services and charges banks issue to clients. Banks now offer most of the information in their own formats.

Corporations with multibank relationships can receive dozens of account statements in differing formats. NCCMA officials view the standard account analysis as a more efficient and cost effective method of presenting cash management information to clients.

*Chuck Rawlins said the NCCMA is beginning to market the new account analysis format.*

In addition to the monthly data, the NCCMA standard also includes 12-month historical data on major balances, average float, earnings credit rate, earnings allowance and net adjustments.

A *Pensions & Investment Age* survey found only 11 banks that plan to introduce the standard this year if it became available; 31 in 1988; and 44 in 1989 or later (*P&I Age*, Aug. 10).

Mr. Grove, who turned over the chairmanship of the standards committee to Chuck Rawlins, assistant treasurer at Georgia Power Co., Atlanta, at the NCCMA conference in Atlanta, said the introduction of the standard will be evolutionary.

"As banks review their account analysis forms, as they normally do every two to three years, they may introduce all or parts of the standard," he said.

The NCCMA committee, which has representatives from 26 cash management banks, has spent three years developing the account analysis format. Some of the banks represented that are expecting to introducing the standard next year are Continental Illinois National Bank & Trust Co. and Northern Trust Co., both of Chicago, and Bankers Trust Co., New York.

Chemical Bank wasn't among the 26 sponsoring banks that developed the standard.

Andrea Frey, assistant vice president at Chemical Bank, said the bank's clients had been asking for the standard format, and "we wanted to be regarded as the leader in the industry while providing our customers with what they had been asking for."

The service initially will be offered to Chemical's corporate clients that now use the ChemLink system, a package of cash management services available through Chemical.

Ken Montgomery, senior vice president at Chemical, said the system has been tested with six or seven of Chemical's clients and "all have expressed an interest in continuing with the service. Our goal is to sign up all (1,000–1,500) of our corporate customers who pay by compensating balances," he said.

The data also will be provided in electronic form to Phoenix-Hecht, Northfield, Ill., and Treasury Strategies Inc., Chicago, for clients using the two cash management consultants and treasury software vendors.

Executives at Phoenix-Hecht announced Chemical will begin transmitting the analysis statements of Electronic Data Systems Corp., Dallas, for interpretation in the firm's proprietary account analysis system.

Gary D. Schneider, senior consultant for Phoenix-Hecht, said the electronic transmission of the EDS account information will be the first application of NCCMA standardized account information delivered to a corporate client from the bank through the Phoenix-Hecht system.

"Several vendors have claimed this capability," Mr. Schneider added, "but to my knowledge, this is the first actual application."

The ChemLink account analysis module enables corporate clients to receive account analysis statements on the 10th business day of each month.

# Margins stay tight

By Barry B. Burr

Issuers and dealers expect selling margins to remain tight on commercial paper, despite the abrupt withdrawal of Salomon Brothers Inc. and PaineWebber Inc., both of New York, from the market.

The withdrawals came as some money center banks — such as Morgan Guaranty Trust Co. — are increasing their presence as domestic commercial paper dealers.

The moves underscore both the lure and the danger of commercial paper for dealers trying to use the market to build more lucrative investment banking relationships with clients, the principal motive many companies cite for being in the business.

"It's a very competitive business," said George Jahelka, assistant treasurer, Pacific Lighting Corp., Los Angeles.

"The margins are very thin," added Marilyn R. Cooper, vice president-financial sales, Chrysler Financial Corp., Troy, Mich., a direct issuer of domestic paper that raises short-term funds for Chrysler Corp., Detroit.

Pacific Lighting used PaineWebber International, London, as one of its three dealers for its Eurocommercial paper program, which has $140 million outstanding and was started in March 1986.

He said Pacific Lighting doesn't plan to add a dealer to replace PaineWebber. Instead, it will rely more extensively on its existing dealers, S.G. Warburg & Co. Ltd. and Swiss Bank Corp. (International) Ltd., both of London. Swiss Bank was brought on two months ago to increase the program's distribution, he added.

"The commercial paper market is a very important market for us," Mr. Jahelka said.

"At this point, the dropping out of PaineWebber and Salomon doesn't affect us. But it's in the corporate interest for the commercial paper market to remain strong. It's a very viable way for meeting working capital needs. It's a very efficient market. I'm speaking of the domestic market; the European market has some growing up to do."

Pacific Lighting relies on commercial paper for all its short-term borrowing, he noted. It has a domestic program with as much as $600 million outstanding, which uses Merrill Lynch Money Markets Inc. and Shearson Lehman Commercial Paper Inc., both of New York, as dealers.

Despite its widespread use of commercial paper dealers, Mr. Jahelka said Pacific Lighting has its investment banking relationship with Morgan Stanley & Co., New York.

Dealers confirm the business is competitive.

"You've had two responses to the fact that it's a competitive

*Ryder System will make some cash management changes in 1988, including possibly reducing the number of banking relationships.*

## Ryder taps Citibank to do study

MIAMI — Ryder System Inc. retained Citibank, New York, to undertake a corporate cash management study, said Robert Prokay, assistant treasurer.

"I would expect there will be some changes in 1988, more along the line of reducing the number of (banking) relationships," he said.

The study, by Citibank's treasury consulting group, involves the company's collection and disbursement as well as other banking cash management services, he added.

He said Ryder executives might consolidate more services with more of its 28 lines of credit banks to have a more substantial relationship with them.

"We haven't completed our work," he said, adding the changes should be completed by mid 1988.

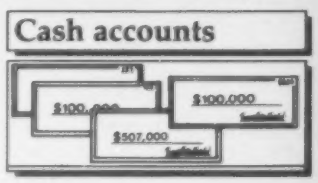
## RTE consolidates

BROOKFIELD, Wis. — RTE Corp. is consolidating its collection banks with two lockbox networks, said John Kita, cash manager.

The move will reduce its lockbox banks from four.

"We're in the process of doing it now," he said.

The electrical equipment manufacturer is opening a lockbox in Dallas with First National Bank of Chicago's collection network, while dropping its site with First RepublicBank Dallas. RTE will retain an existing lockbox in Chicago with First Chicago.



It will drop its lockbox in Pittsburgh with Mellon Bank, moving the collections to Chicago and to an existing site in Charlotte, N.C., with First Wachovia Corporate Services Inc. The company will retain an existing lockbox in Atlanta with First Wachovia.

Mr. Kita said the elimination of Pittsburgh will result in some undisclosed saving while not materially affecting float. "The company doesn't have a significant amount of business in the Northeast," he noted.

"The move in Dallas didn't reduce costs," he said. It was done to consolidate more business with First Chicago.

**PIPER**

*The statistical data are extracted from Pensions & Investments' Performance Evaluation Report, a quarterly performance evaluation published by* Pensions & Investment Age. *PIPER details comparative performance data on special equity, real estate and international funds at more than 50 banks and insurance companies. PIPER is compiled by Rogers, Casey & Barksdale Inc., Stamford, Conn.*

# Overseas funds suffer in crash

**By Marlene Givant**

The very markets that allowed the top international managers in Pensions & Investments' Performance Evaluation Report to shine turned on them during October, but most managers are sticking with their long-term strategies.

All top performers in PIPER for periods ended Sept. 30 were nearly fully invested going into the crash.

"Had there not been such pressure to keep up with the (Morgan Stanley Capital International Europe Australia Far East index), managers would have been more in cash instead of keeping low levels of liquidity regardless of value because of a desire to outperform" the index, said Ian Henderson, director of Wardley Investment Services International Ltd., London. "This may impact the way people look at performance measurement. I think it should. It's a lesson one needed after a period of such strong markets."

Wardley's $80 million International Equity fund managed for Marine Midland Bank, New York, ranked third for the year and second for the three years ended Sept. 30.

Among other top performers for periods ended Sept. 30, the $50 million International Stock Portfolio of Wellington Trust Co., Boston, was top for the quarter, returning 14.5% followed by the International Equity fund of Bankers Trust Investment Management Ltd., London, with 13.8% and Wellington's Pacific Basin Portfolio $3 million with 12.1%. The EAFE returned 5.7% for the period.

For the year, Bankers Trust was first with a 62.4% return, followed by Wellington Pacific with 60.1% and Wardley at 59%. The EAFE index returned 45.5%.

For the three years, London-based BA Investment Management International Ltd.'s International Employee Benefit Equity fund far exceeded the pack with a compound annualized 64.3% return, followed by the EAFE's annualized 57.5%, Wardley's 57% and San Francisco-based Wells Fargo Investment Advisors' passive International Equity fund, with 55.7%.

For the five years, Bankers Trust was No. 1 with a 42.6% return, while the $1 billion International Collective Equity fund of IDS International Inc., London, tied EAFE for second place with 42.4%. BA was third with 42.1%.

For the 10 years ended Sept. 30, none of the funds surpassed the EAFE's compound annualized 24.8% return. The top PIPER fund for the period was First Chicago Investment Advisors' International Equity fund with 22.6% and London-based J.P. Morgan Investment Inc.'s International Equity fund with 21.9%.

But the crash of October took some of the gleam off those returns.

During the week of the crash, Bankers Trust's $130 million fund took profits in small European and Far East markets and Japan, where it had invested 32% in mainly domestic sectors. It then bought Japanese export companies, which were severely depressed from the declining dollar, boosting Japanese exposure to 40% as a short-term play.

Bankers Trust also was heavily exposed to liquid, hard-currency European markets, but it also overweighted Australia and Canada, which were battered severely in October.

Indeed, noted Lynn Minard, director of global marketing, "some of the same reasons that gave us outperformance in the second and third quarter gave us a (beating) in October."

Similarly, three other top performers were hurt in October by their overweightings in Spain.

While BA, which runs a $47 million fund, thinks there is only a 30% chance of a U.S. recession, it is buying defensive stocks and sticking to hard-hit Spain with a whopping 25% exposure, the same allocation it has in the United Kingdom. It believes those markets would have enough domestic growth to withstand a recession.

Wellington Trust's hefty 10% in Spain, which makes up 1% of the EAFE, accounted for much of the success of its international fund.

"Spain was Europe's top market in the third quarter. It was up 30.5% because of record corporate profits and our Spanish portfolio outperformed that of the market," said Jerrold Mitchell, senior vice president.

Wardley Investment also had a significant commitment to Iberia. Portugal was particularly buoyant in the third quarter because of favorable economic news, deregulation and falling interest rates, said Mr. Henderson.

BA, whose assets declined roughly 25% in October, now has less than 5% in Japan, the largest stock market, and has little in other Far East markets because they could be hurt by a downturn in spending by U.S. consumers.

It owns defensive food companies in Europe such as **Unilever N.V.**, in the Netherlands, and is buying stocks that would benefit from a reduction in interest rates such as **Pleasurama PLC,** a U.K. domestic tourist services company.

In Japan, Wellington Trust has a good representation in blue-chip, export stocks, which were strong performers during the

*Continued on page 22*

# Speed benefits special equity pool

**By Anne E. Schwimmer**

Using a strategy of quick buys and sells, the $15 million select equity fund of the First RepublicBank, Dallas, ranked first for the year ended Sept. 30 with a return of 74.5%, more than 20 percentage points higher than the next best performer among commingled special equity funds in Pensions & Investments' Performance Evaluation Report.

California First Bank, San Diego, also did well; its supplemental equity fund ranking second with a return of 53.1% for the year. It was followed by the Putnam Cos.' Putnam specialty growth trust with 52.6%, First Alabama Bank of Mobile's special stock common trust fund, 52.5%, and New York-based Morgan Guaranty Trust Co.'s supplemental opportunity fund, 52.4%.

By comparison, the PIPER special equity median return was 34.7% for the year, and the Standard & Poor's 500 stock index returned 43.5% for that period.

But most of the funds reported declines about equal to that suffered by the market in October.

"Our stocks came down, but we maintained our relative position vs. our competitors," said Matthew Weatherbie, Putnam managing director and chief investment officer-specialty growth equities. The Putnam fund now has assets of $41 million, reflecting a loss of $11 million during the crash. The Putnam Cos. Inc. is a subsidiary of Marsh & McLennan Cos. Inc., New York.

First RepublicBank's fund, however, was heavily in cash Black Monday and escaped relatively unscathed, said Ben J. Fischer, senior vice president of First Republic. He said the indicators were pointing to upcoming difficulties in the market.

In addition to its 12-month returns, the non-diversified equity fund also did well in the longer term, returning a compound annualized 42.3% to rank third for the three-year period.

Mr. Fischer said stocks are bought based only on their low price-earnings ratio and sold instantly once they go up. The small group of stocks in the fund — never more than 10 at a time — tend to have a high turnover rate. Because of this, there was no single outstanding stock in the fund, Mr. Fischer said, but he cited **Consolidated Rail Corp., Old Republic International Corp., American Bankers Insurance Group Inc.** and **Ashton-Tate Corp.** as doing well.

The top performing special equity funds had varied methods behind their successes.

The Putnam fund, which in addition to its high 12-month return ranked 11th in the quarter with 8.9%, focused 60% of its $52 million portfolio in small-capitalization companies, choosing them on a detailed analysis of their expected growth, said Mr. Weatherbie. The rest of the portfolio was placed in larger-cap companies that were expected to show improved relative earnings growth and profitability, he said.

In the small-cap portion, exceptional leaders included **American Cablesystems,** a cable TV company; **Charming Shoppes Inc.,** a specialty retailer; **Community Psychiatric Centers,** which owns and operates psychiatric facilities; **Manpower Inc.** and **Kelly Services Inc.**; and **Digital Communications Associates Inc., Stratus Computer Inc., Sun Microsystems Inc.** and **Telerate Systems Inc.,** all technical and computer-related stocks.

Mr. Weatherbie said the stocks were chosen for their leadership in their fields, strong management, growth history, strong financial positions and superior return on equity.

Among the larger-capitalized holdings, drugs stocks such as **Merck & Co. Inc., Schering-Plough Corp.,** and **Warner-Lambert Co.** did well, as did technical stocks such as **Digital Equipment Corp., Apple Computer Inc**. and **Tandem Computers Inc**. He also pointed to special-situation stocks, such as paper and chemical companies and consumer non-durable goods, such as **Philip Morris Cos. Inc.**

First Alabama's $10 million special stock common trust fund also was among those performing well in the three- as well as the 12-month period, placing eighth with a 10.1% return for the quarter.

The fund, which holds roughly 20 stocks, was invested in mostly technical and basic industry stocks for the year ended Sept. 30, said Charles Murray, trust investment officer.

Good performers were **Motorola Inc., Hewlett-Packard Co., E.I. du Pont de Nemours & Co., International Paper Co., Weyerhaeuser Co., Eastman Kodak Co.** and **Thomas & Betts Corp.**, Mr. Murray said.

First Alabama Bank of Mobile's fund now stands at $7 million; it lost $3 million in the crash.

For longer time periods, California First is a recurring name, placing second in the

# Real estate funds hit hard

## Steep declines in value slash returns of certain pools by 50%

By Steve Hemmerick

Pension officers, now suffering from a stock plunge, saw many of their real estate returns cut by as much as 50% in one 12-month period, Pensions & Investments' Performance Evaluation Report shows.

Some of the biggest declines — coming primarily in value rather than income yield — hit some of the largest and most well-respected commingled real estate funds. Those included some closed-end funds of Coldwell Banker Capital Management Services, Los Angeles, and The RREEF Funds, San Francisco, and open-end funds of First Chicago Investment Advisors, Chicago, and First Wachovia, Winston-Salem, N.C.

For the 12 months ended June 30, the total return for Coldwell Banker Institutional Fund V fell to 3.6% from 14.7% in the 12 months ended June 30, 1986; Coldwell Banker Institutional Fund II fell to 2.4% from 7.3%; Coldwell Banker Institutional Fund VI fell to 1.5% from 6.8%; and Coldwell Banker Institutional Fund VII fell to −3.9% from 10.1%.

Brought down by the midyear writedown on properties, The RREEF Funds USA II fell to −14.7% from 3.3%; RREEF Mid America I, to −7.9% from 7%; RREEF USA I, to 1% from 10.8%; and RREEF Mid America II, to 5.6% from 14.1%.

The fund with the lowest return for the one-year period was the First RepublicBank Real Estate Equity Fund, which had a −23.8% return, vs. 9% for the earlier period.

A longtime consistent performer, First of Chicago's Real Estate Fund F, fell to 3.6% from 9.7%. Also, First Wachovia's Real Estate Fund fell to 6.3% from 13.4%.

For the same 12-month period ended June 30, the S&P 500 returned 25.2%, the Shearson Lehman Government/Corporate bond index returned 4.7%, and the Consumer Price Index, 3.8%.

The top-performing open-end fund was Chase Manhattan Real Estate Fund, New York, which had a 16.6% return, up from 15.2% the previous 12 months. The top performing closed-end fund was the $390 million JMB Institutional Group Trust 1 at 21.6%, the highest return of all funds and above its 18.6% returns of the previous 12 months.

A key reason behind Chicago-based JMB's performance was its roughly 60% weighting in retail properties. Retail properties, particularly large shopping malls, have been showing large gains in appreciation.

Benefiting from the increasing retail values also was the Tower fund of Metropolitan Life Insurance Co. Real Estate Investments, New York. The fund scored a 13.6% return, more than eight percentage points above the 5.2% return it scored the previous 12 months.

The Tower Fund was one of the few to show a large gain. Part of the return came from appreciation in the Rhode Island Mall in Warwick, R.I. It was purchased for about $20 million and, after rehabilitation, now is valued at $42 million, said Bruce Kosakowski, national director for Metropolitan's real estate funds.

The Tower Fund has about $168 million in assets, and its property mix is 25% retail, 35% office, 11% research and development and 29% industrial.

Another reason for the sharp increase, said Mr. Kosakowski is that Metropolitan recognized most of its losses by the end of the first quarter of 1986 and it now has no depreciation "undercutting our returns."

The fund, he said, had just more than 6% income and just more than 7% appreciation.

Previous recognition of losses in depreciation also helped the return for Metropolitan's Separate Account RE, which rose to 8.9% from 6.6%.

The $240 million fund didn't increase as much as the Tower fund partly because it has a much smaller retail component, about 8% of assets, said Mr. Kosakowski. For Separate Account RE, the income return was about 7.2% and appreciation was 1.7%.

In some funds with sharp losses, the declines were attributed to drops in appreciation or flat appreciation; what return was available came strictly from income. But real estate executives pointed out the losses are on paper only because the properties were not sold and, barring a recession, they hope the market has bottomed out and values will begin to rise.

Other losses were attributed to a combination of lower income and drops in value. Part of the reason for the lower return of the First Chicago Real Estate Fund F was vacancies; about one-third of the leases of its properties turned over in some of the softest real estate markets, said J. William Baker, a vice president with First Chicago.

Consequently, he said, vacancies in surrounding properties not owned by the $656 million Fund F caused leasing agents for the fund's properties to reduce some rents. As with other property advisers, he said, First Chicago officials reduced rents by offering free rent up front to get tenants to sign long-term leases. However, he said, since First Chicago, unlike some other real estate funds, doesn't count income until it is in hand, the fund registered no income from some properties during the performance period.

That brought down the income return somewhat, he said. For the latest period, the income return for the fund was 5.9% and appreciation was −2.3%.

For the $400 million First Wachovia fund, all but 0.5% of the return was from income, said Robert Smedley, senior vice president. The fund, he said, "tracked pretty well what was happening in the industry" and that, he said, was the "squeezing out of appreciation that took place during mid-1986, 1987."

There has been "significant bumps on the appreciation side," said Mr. Smedley, and in some instances "initial lease-up took longer than in past years."

For a 10-year period, the Wachovia fund had a 15% return, second only among open-end funds to the Morgan Guaranty Real Estate Fund managed by J.P. Morgan Investment Management Inc., New York, which had an 18.4% return. ■

Who offers your defined contribution plan participants the flexibility of daily telephone transfers between funds?

The same company who offers excellent investment management.

As a leading provider of 401(k) and other defined contribution plan services to more than 1,000 corporations across the country, Fidelity Investments offers a wide range of investment management and client services designed to meet the needs of both you and your employees.

**A Wide Array Of Nationally Known Funds.** With more than $70 billion in assets under management, Fidelity offers a broad choice of professionally managed mutual funds ranging from equity funds like Fidelity Magellan Fund and Fidelity Equity-Income Fund, to money market funds and GIC's. The funds are available on a *no-load* basis to plans with more than 200 eligible employees. And, as market conditions or personal investment objectives change, plan participants have the flexibility to transfer their investments among available mutual funds by telephone on any business day.

**Comprehensive Recordkeeping.** Fidelity's recordkeeping services are designed specifically to reduce your administrative burden. Not only can your employees call us directly to transfer existing balances, they can also redirect future contributions by telephone. Our state of the art system and experienced employee benefit professionals work to ensure timely and accurate reports for both you and your employees.

**Employee Communications Support.** Fidelity will work with you to develop the communication materials needed to support your employees from enrollment through retirement. We'll help you explain your program and the available investment options clearly and effectively. In addition, your employees can call toll-free 24 hours a day, seven days a week and talk with a knowledgeable Fidelity representative about available investment options.

For more information about Fidelity's defined contribution plan services, including fund prospectuses covering management fees, expenses, and applicable sales charges, please call Jeffrey Paster, Corporate Market Manager, at 1-800-345-5033. In Massachusetts call collect 617-570-5692.

## Talk to Merrill Lynch now. Simplify all your 401(k) planning with one source.

It's late. But not too late. Not when you contact Merrill Lynch right away about simplifying all your 401(k) planning.

How can Merrill Lynch help so quickly? Our custom 401(k) services are among the most comprehensive in the market. We provide services for approximately $36 billion in retirement plan assets as of October 23, 1987.

Finally, we're committed to helping you over the critical few weeks ahead.

All this experience, all these plan features have been distilled into one complete 401(k) plan package offering simplicity, confidence and convenience with:

- Plan Design
- Plan Documentation
- Recordkeeping Services
- Trust/Custodial Services
- Investment Services
- Enrollment Services

These are, after all, the very services you want in a 401(k) plan – whatever the time constraints. You can also look to Merrill Lynch for risk averse investment selections, so you and your employees can have confidence in your retirement plan contributions.

For Merrill Lynch to simplify all your 401(k) planning by year's end, you need to act today. In most cases, Merrill Lynch can provide a plan within 30 days. Mail back the attached coupon now. Or call 1-212-755-401k, 9:00 am to 5:00 pm weekdays ET. Or call your local Merrill Lynch office. A Merrill Lynch 401(k) specialist will contact you with full details.

quarter.

Globally, the firm's industry breakdown is 33% each in basic industry and consumer stocks and a smaller portion in regulated services like banking and utilities and what it calls applied science industries such as pharmaceuticals and electronics.

Like BA, Wellington Trust stayed pretty much on the sidelines during the crash. In October, its assets declined about 20%.

The firm's $3 million Pacific Basin portfolio also was sharply underweighted in Japan vs. the Morgan Stanley Capital International Pacific Basin index and invested in sectors similar to those of the international fund.

Early in the third quarter, Wardley Investment reduced its U.K. exposure to 16.5%, but in September the exposure was raised to 26%.

"We remained overweight when the U.K. market proved to be one of the least resilient in the market fall of October," said Mr. Henderson.

The firm also was "wrongly overweight" in France, which suffered uncertainty over poor export performance and privatizations soaking up excess liquidity, he said.

But the firm boosted exposure to Japan, the least scarred market in October, to 44% from 35.5% during the quarter to reap gains from the market's sharp August and September rise. It repositioned the Japanese portion to include export stocks because domestic stocks had lost favor due to interest rate rises and the dollar's brief period of stability.

New Zealand exposure was tripled to 6% during the early part of the quarter but scaled back to 3% in September.

Wardley, which lost 24.5% in October, raised cash to 30% at the beginning of November, largely by liquidating some holdings in Japan and the United Kingdom on Black Monday.

"Everybody wanted to increase liquidity soon after it became clear the markets would have a severe correction," said Mr. Henderson.

Since then, it has moved significantly into continental Europe, buying such high-yield companies as **Philips N.V.** in the Netherlands and **Nokia Oy AB**, a Finnish manufacturer of telecommunications equipment and cables.

Contrary to the other top managers, Peter Lamaison, president and chief investment officer of IDS International, avoids Spain and Portugal.

He likes large, liquid markets and smaller markets that have been popular longer than Spain, such as Hong Kong, Singapore and Australia.

Unfortunately, an overweighting in those markets vs. the EAFE contributed to the firm's 20% loss for the month of October.

"We had anticipated that the world economy would almost grow too much in 1988, raising inflationary fears. The crash took those away. We were positioned to take advantage of above average earnings growth," said Mr. Lamaison.

IDS had no cash because it thought the bull market had some momentum left. Now, quality, liquid companies that have clear earnings potential and have been hurt the worst are the firm's favorites.

"Switzerland looks solid as a rock and it has more of an entrepreneurial go to it than Germany," said Mr. Lamaison.

Switzerland's **F. Hoffmann-La Roche & Co. AG,** and West Germany's **Sandoz Ltd.**, a specialty chemical and pharmaceutical company, are among Mr. Lamaison's picks.

Mr. Lamaison also likes U.K. consumer staple goods and has purchased stock in **B.A.T. Industries PLC**, a tobacco company. ■

It takes a lot of insight to predict which red-hot commercial property is destined to become a white elephant. It also takes a lot of research and market strategy.

At Ætna, we have plenty of experience in providing all three. Equally important, we have expertise in hands-on property management.

Now Ætna is starting its second, closed-end specialty fund for qualified pension plan investors.

It involves the construction, or rehabilitation, of shopping centers in key

The Retail Development Fund will accept subscriptions above $500,000 and is expected to close by early 1988. Pension managers call T. Jerald Moore, Vice President,

five-year and first in the 10-year periods with compound annualized returns of 30% and 28.6% respectively.

California First's $12.5 million supplemental equity fund invests primarily in small-cap companies, said Dave Urban, assistant vice president-funds management. The fund invests in anywhere from 30 to 70 companies at a time, said Mr. Urban. "We're looking for above-average earnings momentum," he said. "We hope the companies will either become large on their own or will be bought."

Although he declined to name current holdings, Mr. Urban said technical stocks were what championed the fund. He also said a few employment-service companies that had done well and mentioned a financial news company, **American Business Journals**, that had also done well.

Although the crash dropped the fund to $12.5 million from $17 million, Mr. Urban said he believes small-cap investments are more attractive since the crash. In the worst case, he said, small companies will continue to grow and the S&P 500 will fall to their level. In the best case, the companies will grow to the level of the S&P. "Either way you have relative performance," Mr. Urban said.

For the quarter ended Sept. 30, the supplemental opportunity fund of Morgan Guaranty Trust Co., New York, was first with a return of 13.5% vs. the PIPER median of 5.3% and the S&P 500's 6.6%.

Rounding out the top five for the quarter were First National Bank of Minneapolis' Fund 20 with 11.8%, First Trust Co.'s special equity fund, St. Paul, Minn., with 11.1%, the First National Bank of Maryland's special equity fund, Baltimore, with 11.1% and the supplemental equity fund of Manufacturer's Hanover Trust Co., New York, with 10.8%.

For the three-year period, the growth fund of E.F. Hutton Trust Co., Wilmington, Del., was first with a return of 51.5% compounded annually vs. the S&P 500's 29.4%, and the PIPER median's 23.3%. Hutton's emerging growth fund was second with a compound annual return of 48.8%, followed by First Republic with a return of 42.3%, First of Neenah, Wis., with 35% and Trust Co. of the West, Los Angeles, with 34.6%.

For the five-year period, Fidelity Management Trust Co., Boston, was first with a compound annual return of 36.3%, compared with the S&P's 26.8% and the PIPER median of 22.2%. The other leaders were: California First Bank with 30%, Chase Manhattan Bank, New York, with 30%, Citicorp, New York, with 28.7% and Connecticut National Bank, Hartford, with 28.2%. All returns are compound annualized.

For the 10 years ended Sept. 30, California First Bank was the leader with a compound annual return of 28.6% vs. the S&P's 18.3% and the PIPER median of 19.8%.

Other leaders included Bankers Trust Co., New York, with an annualized 25.7%, First of Maryland with 23.8%, Manufacturer's Hanover with 23.4% and Chase Manhattan Bank with 23.3%. ■

# Organization opposes IRS benefit plan

WASHINGTON — The ERISA Industry Committee is asking the Internal Revenue Service to withdraw its proposal that would require employers to provide benefits for leased employees.

The committee also wants the IRS to hold public hearings.

"The proposed regulations carry the concept of a 'leased employee' to an intolerable extreme, wholly inconsistent with well-accepted business practices," said ERIC Executive Director Mark J. Ugoretz.

Under a September proposal, a company could be required to provide benefits to independent contractors, professionals and even some government employees who provide substantial services to a particular plant, ERIC pointed out in a release.

The current statute doesn't precisely define a leased employee, but it is generally interpreted to mean office workers or other employees leased by a firm to do work typically done by a regular employee. The proposed regulation would define a leased employee in broad terms so that it could include consultants or other independent contractors. ■

# Public Funds

## International is hot, realty cool

By Marlene Givant

Although stock markets crashed worldwide Oct. 19, public pension funds are moving ahead with plans to place at least $6 billion more into international investments, continuing an already robust trend.

But interest in real estate, the hot investment among public funds in the past few years, will slow, with fewer funds making initial investments and more trying to reach their target allocations.

"I don't know that this was a particularly hot year" for real estate investing among public funds, said William Ramseyer, president of Pension Realty Advisors Inc., San Francisco. "Public funds are farther behind their target real estate allocations than stocks and bonds. There will be more allocations to come. Very few public pension systems entered the marketplace in 1987; most were continuing to buy."

While more than 15 public funds made their first moves — exceeding a total of $6 billion — into international investments in 1987, and still more added to their current allocations, many still are searching for their first such managers *(see charts, pages 47 and 49)*.

"They're not even thinking about (cutting back). (The crash) is an aberration. Long term, they can weather it," said Carol Proffer, principal with William M. Mercer-Meidinger-Hansen Inc., St. Louis.

With the U.S. stock market picture made bleaker by the budget deficit, there's no reason not to invest overseas, said Wendy Howard, U.S. marketing manager of the New York office of the WM Co., a London-based consultant. "It may well be overseas investments will outperform next year," she said.

Because the number of public funds is small and the market closely knit, international activity by public funds has been epidemic.

"They tend to do things in tandem. There was a catch-up period to the corporate funds because a lot of public funds had to pass legislation before being able to go international. Now they're all going ahead at the same time," Ms. Howard said, noting there are at least 17 international and global manager searches in progress.

The $23 billion California State Teachers' Retirement System, Sacramento, a leader in real estate investments with $600 million, plans to invest $400 million with international equity and bond managers after the first quarter of 1988.

It also plans to branch into special situations investments such as leveraged buy-outs and venture capital within three to four years.

"With retooled real estate, international and special situations, we'll complete the set of programs the board set one year ago," said Larry Kurmel, chief executive officer.

The fund will invest in international bonds and equities to diversify as broadly as possible.

But the diversification benefits of international equity will be put to a test because of the crash.

"Although the markets worldwide have moved in tandem as a result of the crash and the original diversification argument said there was a low correlation (between the U.S. stock market and those in the rest of the world), I think when things settle down, we'll see the correlation. But of course as the markets globalize, the correlation will begin to increase," said Ms. Howard.

For instance, in the 10 years through 1986 there was a lower level of correlation between international markets and the U.S. market than during the past three years, when to the end of 1986, there was only a 0.12% correlation between the Morgan Stanley Capital International Europe Australia Far East index and the Standard & Poor's 500 stock index.

"We will see more of a correlation between the rest of the world and the U.S., but from a base of 0.12% there's quite a margin. That will continue to lure public funds," Ms. Howard said.

Among funds moving ahead with plans to make their initial moves into international investments, are the Teacher Retirement System of Texas and the North Dakota Teachers' Insurance & Retirement Fund.

The internally managed $17 billion Texas Teachers system, Austin, expects to start investing internationally by mid-1988.

"We've got some logistical hurdles to get past and we need final board approval, but we've been looking into it for a year and I'm optimistic we'll eventually get that worked out," said Joseph Perrone, chief investment officer.

## Public funds survive market crash

### Cautious equity stance limits damage

By Jacqueline Dutton

Public pension funds weathered the October stock market crash well due to a cautious equity stance taken by fund managers and executives.

According to pension executives of 29 of the nation's largest state and municipal funds, the equity positions of the funds were, as a whole, below the maximum levels allowed heading into the Oct. 19 stock market crash.

In addition, most of those interviewed said their funds are maintaining a conservative equity stance at a time when other funds, investors and companies are raising their equity stakes to take advantage of reduced stock prices.

For 20 funds surveyed, equity exposures are limited by the respective state or local governments. Although the median maximum equity position allowed was 50%, the stock exposure of the median fund was only 40%.

For the nine remaining funds, equity exposure is not restricted to a specific percentage, but executives are charged with making "prudent" asset allocation decisions. Among these, the median equity stance taken was 35%.

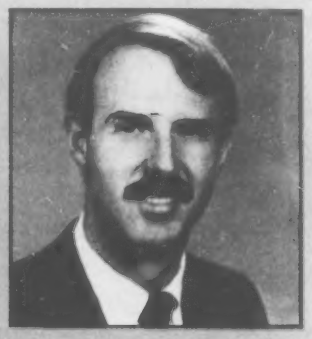
Although the Texas Municipal Retirement System, Austin, could invest up to 100% of its assets in stocks if trustees believed it to be prudent, the $1.5 billion fund came out of Black Monday unscathed. According to Gary Craig, investment officer, the fund sold all of its stocks during the spring and put everything into U.S. Treasury and corporate debt. Mr. Craig said the fund will hold its position despite the drop in stock prices.

Before the crash, the $3 billion San Francisco City and County Employees' Retirement System, the $8 billion Maryland State Retirement Systems, Baltimore, and the $3.6 billion Iowa Public Employees' Retirement System, Des

*Continued on page 48*

*David Rose of Alaska Permanent is "a little bittersweet" about selling stocks.*

*Bennett Shaver said the Maryland system was merely implementing its financial plan.*



*Maryland's Howard France, left, said the move out of stocks reduced the equity investment to 35% of total assets from 60%. San Francisco's Dewitt Bowman said fund officials have no plans to return to the equity market, but Charles Webb said the Tennessee system might "ease back in."*

## 2 smell trouble, sell stocks

By Fred Williams

While the October stock market crash caught many plan sponsors and investment specialists by surprise, at least two major public funds anticipated the market bust and sold stocks in advance to lock in market gains.

The Alaska Permanent Fund Corp. reduced passive equity exposure $725 million in the spring and shifted the assets to U.S. Treasury securities based on a belief that the market had reached its peak and was due for a correction (*P&I Age*, March 9).

Fund executives from the Maryland State Retirement and Pension Systems, Baltimore, sold $2.3 billion in stocks and established a $4 billion dedicated bond portfolio in October before the crash, feeling the market was nearing its peak (*Pensions & Investment Age*, Oct. 19).

Executives at both funds claim no special insight in calling the market, and view their conservative moves as fortuitous and in accordance with their conservative investment styles.

"It wasn't a market timing call or an asset allocation decision," said Bennett H. Shaver, secretary of the Maryland fund. "We were simply implementing our fund's financial plan."

Both funds plan to re-enter the

*Continued on page 50*

# Hot, cold . . .

*Continued from page 47*

The fund initially would commit about 1% of assets — $170 million — to foreign equities.

Wellington Management Co./ Thorndike, Doran, Paine & Lewis, Boston, the fund's investment counsel, would provide investment advice to the in-house management team.

The $315 million North Dakota Teachers' fund, Bismarck, which completed an asset allocation study with Callan Associates, San Francisco, that called for up to 5% — $15.8 million — in international investments, plans to invest overseas by next spring or summer.

"We want to study it to see if it would be politically feasible," said Scott Engmann, director. The study also called for 5% real estate, 5% cash, 35% equities and 50% bonds.

Unlike the case of international, where most 1987 activity was from first-time investors, real estate's growth was from veteran public fund investors pumping more into the area. Public funds were more active than corporate funds in real estate largely because they're further from meeting their target allocations. But funds adding to real estate plan to move slowly.

The State of Wisconsin Investment Board, which oversees about $18 billion in pension assets, will invest between $1.5 billion and $1.8 billion in real estate equity investments during the next four and a half years (*Pensions & Investment Age*, Nov. 2) and will invest a portion internationally; the approximately $36 billion New York State Common Retirement Fund will increase its equity real estate exposure to about 6% from 0.67% by 1992 primarily through direct investments (*P&I Age*, July 27); and the $43 billion California Public Employees' Retirement System and the $23 billion California teachers' system each will increase its real estate allocation to 10%.

The California Teachers fund will diversify its real estate holdings, emphasizing whole portfolio goals over individual deals to meet its target in the next three to four years.

"Historically, we've done no residential or hotel acquisitions . . . and we might consider those now. The real estate market's still tough," Mr. Kurmel said. "In the past, we and other funds looked around for good deals. There's more to it now than that. We'll make decisions based on what we want our portfolio to look like."

In addition to diversifying by property type, the fund will use different subclasses of real estate debt and equity. "We had been doing cash-on-cash deals. Now we're looking at equity kickers, equity participations and maybe some loans," he said.

"We didn't do a lot in acquisitions in '87. We just started again. The market is still a little mixed but will get healthier for long-term holders like us," said Mr. Kurmel.

The $14.5 billion Ohio Public Employees' Retirement System, Columbus, doubled its real estate investments in 1987 to $400 million, all through direct investments.

"We're trying to withdraw money from funds and go to separate accounts. . . . People don't like real estate; we like it," said Robert A. McLaughlin, investment officer. "We look at real estate on a long-term basis. In the first half of the decade, it looked overpriced, but in the last two years it's become more competitive with bonds and stocks."

Even with the October market crash, which has made stocks perhaps more attractive than real estate, the industry looks more attractive long term than bonds or cash, he said.

"The tax law changes that took place a little over a year ago really hurt the tax-paying public. The tax laws make the public funds a lot more competitive in the real estate area," Mr. McLaughlin said.

Increased real estate investments by public funds have been a function of growth in total plan assets. The greater the growth, the harder it will become to find good deals, according to consultants.

"For large public plans, the precious question is how to get all that money spent that has to be spent. With the possibility of a market decline, they might want to sell stocks and put them into other asset classes . . . The assets have to go somewhere else," said Paul Saylor, principal, Institutional Property Consultants, Atlanta.

"There's more dough allocated to real estate than can be wisely spent. It doesn't look like they can spend as much on actual real estate as they've allocated . . . The investment-grade marketplace is very capital intensive, mostly because large public funds have too much allocated to real estate. They're too bright not to spend that money sensibly. As to what's going to happen to that money, it beats me."

Mr. Ramseyer of Pension Realty Advisors is urging caution.

"We're encouraging clients to continue their disciplined approach (to real estate). They should take five years or more to meet targets, if necessary," he said. ■

*This windmill farm, constructed by U.S. Windpower Inc., is one of the many energy projects drawing the interest — and money — of insurers and their pension clients.*

## Major investors provide fuel for energy projects

**By Marcia Parker**

The builders of waste-to-energy, cogeneration and other renewable energy projects increasingly are seeking financing from a growing number of major institutional investors — including insurance companies and their pension clients — attracted by solid returns and socially and environmentally responsible investment.

"This is a large and growing market. The number of transactions are coming into Aetna at a tremendous rate. It's a growing focus for us," said Joseph E. Levy, investment director at Aetna Bond Investors, a unit of Aetna Life Insurance Co., Hartford, Conn. "These are socially and economically acceptable investments for our stockholders and our pension clients."

Dozens of garbage-to-energy plants are sprouting up across the country as communities wrestle with landfills filled to capacity and worries about protecting underground water supplies from seepage. Natural-gas and coal-fire cogeneration plants also are popping up all over, along with a sprinkling of hydroelectric plants, wood-fired generating plants, geothermal projects and windpower farms.

During the next decade, these capital-intensive projects are expected to need some $50 billion of financing, according to industry analysts. The market for refuse-to-energy facilities is especially strong, according to analysts who follow the builder-operators in the industry. Many municipalities are seeking bids from a short list of builder-operators.

Institutional investors, Wall Street investment bankers who arrange the deals and the builder-operators of these plants say there is clearly a trend toward greater use of institutional capital sources and greater use of taxable paper instead of the traditional tax-exempt paper.

Companies that financed projects partly out of internal cash flow are using those funds for other corporate purposes, and turning more to institutions with deep pockets. In addition, institutions that have had good experiences providing either debt or equity are now considering offering both.

Because the institutional financing is arranged in the private placement market, it is hard to say how much money is being pumped into these projects. But based on interviews with a variety of the key institutional players, it appears they have invested well over $1 billion in recent years.

These experts expect the bulk of the financing that will be required in the future to come from institutions, including insurance companies, finance subsidiaries of major companies and more pension funds. At least two major insurance companies say they are investing company money along with some of the pension assets they manage for outsiders.

In fact, the competition among the major institutional players is heating up, according to the institutions and Wall Street investment bankers.

"There's more competition to provide the financing. There aren't a lot of places for institutions like us to put our money," said George Schaefer, senior vice president and manager of the energy program at General Electric Credit Corp., Stamford, Conn.

Major finance companies like GECC and Ford Motor Credit Corp., Dearborn, Mich., have long played a key role in providing equity financing to these projects. Now they are stepping up their participation.

## Ogden hits goal in self-imposed diet

**By Marcia Parker**

NEW YORK — Six years of restructuring is starting to pay off for Ogden Corp., a company that has shed its fat to become what some analysts believe is a winner.

Ogden's transformation from a hodgepodge of capital intensive businesses to a major diversified services company is beginning to deliver its first fruits. Earnings are up, the company's balance sheet is strong, it has a $300 million-plus cash hoard on hand, debt and costs have been slashed.

Even with Wall Street's post-stock market crash economic forecasts, the company is expected to perform well, with strong future earnings prospects. Analysts who follow the company are especially keen on Ogden's growing position in the resource recovery area.

Laurence C. Baker, who follows the company for E.F. Hutton & Co., ranked Ogden as one of five stocks he believes will fare well in a slow growth environment. "They represent the highest quality in terms of balance sheet, market liquidity, cash availability and earnings stability," Mr. Baker said in his Nov. 9 report on the company.

Like most analysts who follow the company, he expects Ogden, whose stock was selling around $26 a share in early November, to see earnings rise to an estimated $1.30 per share this year, and $1.60 per share in 1988, from 97 cents per share in 1986.

Carol Neves, vice president at Merrill Lynch Capital Markets, said Ogden's cash flows are impressive, it's a market leader in mass-burn resource recovery plants and 20% earnings gains are expected in the next five years. "Shares are expected to benefit from price-earnings multiple increase as waste-to-energy and toxic waste markets further dominate Ogden's future results," Ms. Neves said.

Analysts say Chairman and Chief Executive Ralph E. Ablon — who presided over the metamorphosis that began in 1981 and was completed this year — and the management team have done a good job on a tough restructuring.

Organized as a public utility holding company in 1939, Ogden through the years acquired a mishmash of companies, from Avondale Shipyards Inc. to Tillie Lewis Foods Inc. to Doggie Diner Inc.

As was the case with many conglomerates, Ogden's performance did not shine. "We looked at what kind of world we would live in and the ideal company for the balance of the century. We discovered that everything we had didn't fit and we had almost nothing we needed to become a total services company," said Mr. Ablon.

By 1980, corporate America was shifting to a service-oriented economy and adopting a back-to-basics strategy, which manifested itself in the shedding of ill-fitting and poor-performing assets and concentrating on operations the company knew best. Ogden joined that bandwagon, and embarked on a major restructuring in 1981.

Today, the company is a shadow of its former self. It will derive less than 5% of its 1987 operating profit from businesses that were part of the company in 1981.

No longer dependent on myriad capital-intensive affiliates, Ogden is a diversified company primarily engaged in providing services in four major areas: operating, project, financial and environmental services. To accomplish that restructuring, several companies have been sold and others were acquired or merged.

A streamlined management structure was put into place. Each unit — Ogden Allied Services Corp., Ogden Environmental Services Inc., Ogden Financial Services Inc. and Ogden Projects Inc./Ogden Martin Systems Inc. — is headed by a president/chief operating officer. All report to Mr. Ablon.

"We see more and more indications that what we did was right. There is no service we cannot and do not perform," Mr. Ablon said.

Net sales and service revenue from continuing operations for the first nine months of 1987 were $636.6 million, up from $616 million in the comparable period of 1986. Operating services revenue was up significantly, primarily reflecting increased revenue in

*Continued on page 56*

## Videos go corporate

**By Marcia Parker**

NEW YORK — Before they know it, institutional investors scouting for investment opportunities and corporate chieftains looking for deep pockets may not have to leave home to find each other.

That's because corporate fund raising has gone video.

"Video is finding its way into every part of our lives — including using videos to raise money from institutional investors. It's a growing part of our business," said David Dreyfuss, president of Broad Street Productions, New York.

Broad Street, which started out as a small in-house Drexel Burnham Lambert Inc. group a few years ago, has grown so much it has been spun off as a separate subsidiary.

Like its many competitors in a very hot field, Broad Street has done videos for a host of companies looking to raise money, including many Drexel clients.

Co-stars of the video Broad Street produced recently for Triangle Industries, the big New York-based packaging firm that was raising $500 million to repay debt and provide working capital, were Nelson Peltz, chief executive officer; Peter May, chief operating officer; and Frederick McCarthy, managing director of Drexel's corporate finance department. The presentation was beamed to 12 cities by satellite from New York, where it went on air before an audience of institutional investors.

"Video has gone from a luxury to being a competitive necessity," Mr. Dreyfuss added.

It's not that road shows, a time-honored tradition that took corporate managements on tour to hawk their wares to investors with money to burn, have gone completely out of style. Many corporate executives prefer to meet investors in person.

"Some CEOs love videos and are gung ho," Mr. Dreyfuss said. "Others have to be convinced."

*Broad Street Productions is one company that struck gold in producing videos for corporate executives eager to seek institutional investors.*

For video lovers, a high-tech version of the road show, complete with smashing special effects, is definitely in.

Corporations increasingly are having private production companies or their investment banker's in-house production team sell the companies via video.

*Continued on page 56*

# Fuel . . .

*Continued from page 55*

"We've been an active player for over five years," said Mr. Schaefer. "We have invested $300 million to $400 million, primarily equity financing, in about 25 projects valued at over $1.5 billion. We're very bullish. In the past two weeks we've closed on a hydroplant in Pennsylvania and a waste-to-energy plant in the Northwest."

Ford Motor Credit has approved equity investments totaling more than $135 million in three projects and there are several other proposals being considered, according to Robert Chambers, manager of financial planning at FMCC.

"We hope to invest a lot more over the years. There's more product out there. Demand is driving facilities across the country. It fills an essential need for the community and the returns are satisfactory," said David Barrett, investment officer, municipal financing at FMCC.

Unregulated subsidiaries being set up to run these plants by major utility companies are emerging equity players. Most of those subsidiaries are limited to 50% ownership, and they look to institutional partners to provide the rest of the financing. In the meantime, GECC and FMCC executives say they are considering providing debt financing in conjunction with the equity financing they provide.

"We are thinking about it. We have proposals in hand," Mr. Schaefer said.

The major insurance companies that have provided mainly debt financing in the past are Prudential Insurance Co. of America, Newark, N.J.; John Hancock Mutual Life Insurance Co., Boston; and Aetna.

"We've invested about $300 million in debt and equity in over $1 billion worth of projects and we'll do more. We have invested predominantly our own money and some money from a small account that we manage of pension funds. These are longer-term investments and appropriate for them," said Herbert Magid, senior investment officer at John Hancock.

Traditionally, the builders of renewable energy industry have relied on tax-exempt debt, which the institutions purchased. But that is changing. Under the new tax law, tax-exempt municipal bonds lost some of their allure, but institutional investors say they are willing to forgo those benefits.

One of the first projects to make the break with traditional financing was Wheelabrator Technologies Inc., Hampton, N.H., which recently financed a garbage-burning plant with taxable paper in a $180 million sale-leaseback transaction (*Pensions & Investment Age*, Oct. 19). FMCC made a $63 million equity contribution, while 11 U.S. insurance companies led by Hancock provided the debt capital.

"The tax treatment doesn't make the project," Mr. Levy said, adding Aetna has invested millions in more than 12 projects. "We just finished our first taxable private placement financing for a county prison cogeneration plant. We'll be seeing more taxable financing." ■

# Rate-sensitive stocks pay off

By Jacqueline Dutton

Institutions were invested heavily in interest-rate sensitive stocks the week before the market crash, a move that proved to be defensive as those sectors were the most buoyant in a sinking market.

The 10 industries in which the institutions were most heavily invested were electric utilities, telephone companies, international oils, major regional banks, domestic integrated oils, food processors, drug companies, retail companies, chemical companies, and computer and office equipment companies.

The institutions were invested in the best-performing industries — seven of the 10 were in the top half of all industries in terms of investment returns for the six days of the market plunge from the opening of the market Oct. 16 through the close Oct. 23.

However, only four of the 10 industries had returns greater than the Standard & Poor's 500 stock index for the period.

According to data provided by CDA Investment Technologies Inc., Silver Spring, Md., institutional investors, including the nation's major pension fund managers, were concentrated in resilient electric utility and telephone company stocks Oct. 15, just before the market's record 508-point drop, although the two sectors were market laggards throughout 1987. Of the 84 industries ranked by CDA, electric utilities suffered the least damage, an average decline of −5.7% Oct. 15 to 23. That compares with −16.8% for the S&P 500 index and −32.7% for aluminum companies, the hardest hit industry.

Rounding off the top five sectors in terms of returns were: breweries, −7%; soaps, −12.9%; natural gas distribution, −12.9%; and miscellaneous financial, −14.7%.

Telephone stocks did relatively well, ranking ninth overall and outperforming the S&P 500 with a one-week return of −16.1%.

"It was a classic flight to quality," said Geoff Johnson, a telecommunications analyst for Argus Research Corp., New York. "Investors were flying into defensive issues such as electric utilities and telephones."

The strongest utility stocks the week of the crash managed to eke out returns on the upside. **Central Maine Power Co.**, **Nevada Power Co.** and **Central Vermont Public Service Co.** recorded gains of 2.7%, 1.3% and 1.1%, respectively. **Southern Co.** and **Sierra Pacific Resources** also held up well; they returned 0.6% and zero respectively.

The best performers among telephone stocks for the week of the crash were: **Bell Canada Enterprises Inc.**, −1.3%; **Bell Atlantic Corp.**, −2.9%; **NYNEX Corp.**, −5.6%; **Rochester Telephone Corp.**, −5.9%; and **Southwestern Bell Corp.**, −6.5%.

Pension funds were also invested heavily in other sectors before the plunge: international and domestic oil, major regional banks, foods, drugs, general retail chain, chemicals, and computers.

All three sectors outperformed the S&P 500. The integrated international oil and major regional bank industries ranked 10th and 11th, respectively, with prices declining, on average, −16.2% and −16.7%.

Among the strongest international oil stocks during crash week were: **Exxon Corp.**, −4%; **Global Natural Resources**, −8.5%; **TransCanada PipeLines Ltd.**, −8.5%; **Mobil Corp.**, −9.6%; and **Chieftain Development Co. Ltd.**, −10%.

Frank Knuettel, a vice president and oil industry analyst at Prudential-Bache Securities, New York, said oil stocks — international and domestic — fell in line with the market during the first part of the slump as over longer periods, oil stocks have a stronger correlation with market movements than changes in oil prices.

But because oil price fluctuations account for some movement in oil stock prices in the short term — a period of days, for instance — he said the oil stocks finished the week strong in reaction to a rise in oil prices.

Joan Goodman, a bank analyst in the Chicago office of New York-based Pershing & Co., said major regional banks such as **Barnett Banks of Florida** better endured the crash than national banks because, for one thing, they were not saddled with South American debt.

She said in her opinion, Barnett Banks is the strongest stock among the lot. Other enduring stocks during the slump were **La Jolla Bancorp**, **Landmark Bancshares Corp.**, **Marine Midland Banks Inc.** and **Horizon Bancorp**.

According to CDA, losses among stocks in domestic integrated oil, food and drug companies were relatively low compared with other industries, but lagged the S&P 500. With returns of −17.2% for domestic oil, −18.8% for food, and −20.3% for drug stocks, the sectors were ranked 13th, 19th and 29th respectively among the 84 industries.

**Sun Co.** was the champion among domestic oil stocks for the week, returning a positive 0.5%. Other strong oil stocks were: **Energy Development Partners Ltd.**, −2.9%; **National Gas & Oil Co.**, −4%; **Union Exploration Partners Ltd.**, −7%; and **Permian Basin Royalty Trust**, −7.7%.

The best-performing food stocks for the period were: **Sara Lee Corp.**, −1%; **Kellogg Co.**, −3.8%; **Quaker Oats Co.**, −4.6%; **H.J. Heinz Co.**, −7.1%; **William Wrigley Jr. Co.**, −7.1%; and **Campbell Soup Co.**, −8%.

Among drug stocks, the top five performers suffered greater losses. The leaders in this industry were: **Smithkline Beckman Corp.**, −5.1%; **Schering Plough Corp.**, −8.6%; **Marion Labs Inc.**, −10.3%; **Novo Industries**, −13.4%; **Merck & Co. Inc.**, −14.3%, and **Pfizer Inc.**, −14.3%.

While many of the industries in which pension funds concentrated stock investments the week of the crash were among the least damaged, the retail chain, chemical and computer company stocks were among the biggest losers, ranking 45th, 63rd, and 75th, respectively, out of the 84 industries. Retail chains returned −22.9% for the week; chemical concerns lost −25.6%; and computer companies returned −27.8%.

Some stocks in those underdog sectors, however, did comparatively well. According to CDA, the top five performers in the general retail chain industry were: **Brad Ragan Inc.**, −2.1%; **Kay Corp.**, −9.3%; **Jewelcor Inc.**, −12.5%; **Pep Boys — Manny, Moe & Jack**, −12.7%; and **Wienar Enterprises Inc.**, −14.4%.

**Publicker Industries Inc.** was the leader among the chemical stocks, returning −7.7%. It was followed by **Essex Chemical Corp.**, −10.1%, **Chariot Group Inc.**, −10.5%; **Hercules Inc.**, −12.8%; and **Stepan Chemical Co.**, −14.8%.

The sturdiest computer stocks the week of the crash were **Dataram Corp.**, −6.7%; **Compugraphic Corp.**, −10%; **Eldon Industries Inc.**, −11.8%; **IBM Corp.**, −13.8%; and **General Datacomm Industries Inc.**, −13.9%. ■

## Top performing stocks by industry

| Industry | Stock | Stock performance 10/16 - 10/23 |
|---|---|---|
| Banks - major regional | Landmark Bancshares | −4.0% |
| | LaJolla Bancorp. | −6.7 |
| Chemicals | Publicker Industries | −7.7 |
| | Essex Chemical | −10.1 |

# Takeover bill clears hurdle

By Nicky Robertshaw

WILMINGTON, Del. — A draft bill that virtually would eliminate hostile takeovers of nearly half of the companies on the New York Stock Exchange could become law early next year.

The draft, which a unit of the Delaware Bar Association agreed Friday to continue pushing, would not allow a potential acquirer to gain control of a Delaware-incorporated target company for three years unless approved by the board of directors — with certain exceptions.

The proposal still faces internal bar association hurdles and possible redrafting before it is approved as hoped by year's end. Whatever the bar association finally produces almost certainly will be passed into law by the Delaware General Assembly when it reconvenes next month.

The proposal had been circulated within the corporate community and among bar association members. It is similar to, but less severe than, laws in New York and eight other states, and is being pushed by Gov. Michael N. Castle and other state officials eager to protect Delaware companies from takeovers, lest they move their incorporations to states with more favorable protections.

Earlier this year, the bar association unit — the Council of the Corporate Law Section — rejected a statute similar to the Indiana law that was upheld by the Supreme Court in April. That proposal never made it to the Delaware General Assembly.

Of the 27 states that have some sort of anti-takeover statutes, 14 have laws along the lines of Indiana's, while nine have laws similar to the most recent Delaware proposal, according to the Investor Responsibility Research Center, Washington.

Under the proposal, a Delaware corporation could not merge with an "interested" shareholder (that is, a potential acquirer who had received board permission to acquire 10% of the company's stock) for three years after that shareholder passed the 10% mark, unless: The board approved the takeover; the would-be acquirer got at least 90% of the stock as a result of the transaction that moved the shareholder to the 10% mark; or the shareholder already amassed 90% and received the support of a majority of the remaining 10% of outstanding shares.

Because of these exceptions, the Delaware bill is seen as less severe than laws in New York and eight other states.

Still, many pension fund executives and investor groups have lashed out at the proposal, urging the Council of the Corporate Law Section to vote it down on the grounds it ultimately would hurt stock values and inappropriately reduce the shareholders' role in corporate governance.

"To allow an inefficient or incompetent management to entrench itself, in the guise of 'shareholder interests,' will serve to depress stock values and undermine the integrity of our economy," said Dale M. Hanson, executive officer of the more than $43 billion California Public Employees' Retirement System, Sacramento, in a Dec. 3 letter to the Delaware Bar Association council.

"In our view, the draft . . . may significantly harm the value of shareholders' investments in Delaware corporations," he added, noting the California system, rather than being allied with would-be acquirers, is concerned with long-term

CORPORATE FINANCE: Morrison Knudsen Corp., a major engineering and construction company, is digging its way back to profitability after restructuring resulted in a hefty third-quarter net loss of $68.2 million — Page 25.

# Indiana zaps firms

## Corporate taxpayers lose, state gains, float

By Barry B. Burr

INDIANAPOLIS — Indiana soon will require large corporate taxpayers to remit state tax payments electronically, a move that will cost the companies a total of about $1.4 million each year.

The new law, effective with tax payments accruing after Jan. 1, makes Indiana the first state to eliminate checks for corporate tax payments. An estimated 2,000 to 7,500 companies with operations in Indiana will make their tax payments through the automated clearinghouse.

The corporations' loss will be Indiana's gain: The state's investment income will increase an estimated $1.4 million because funds will be available sooner.

"The effect is a losing proposition" for corporations, said Thomas K. Connery, supervisor-disbursements at Amoco Corp., Chicago, which has a major oil refinery in Whiting, Ind., among other operations in the state.

**Cash management**

"The purpose of the ACH is to get the money faster," said Randolph G. Holt, business administrator, Indiana Department of Revenue. "The real benefit (to the state) is the gain in investment income."

Withholding, sales, corporate income and motor vehicle fuel taxes all will be subject to the electronic payment program. The state collects some $4 billion annually in such taxes, Mr. Holt said, of which about half will come through the ACH collection.

The state Revenue Department in November began notifying large corporate taxpayers — generally those paying more than $10,000 a month in taxes — about the ACH payment requirement.

(Small corporate taxpayers will continue to remit some $2 billion in payments by check to one of the state's three lockbox banks.)

The notification process, still under way, includes bank au-

# Front running assailed

By Chuck Paustian

Institutional investors are taking aim at front running, contending it threatens the integrity of the auction-market process and might force them to explore other means of executing trades.

Institutional traders and other investment professionals acknowledge front running, in which a broker with advance knowledge of a trade takes a position in order to benefit from the expected price movement, probably is not as widespread as commonly thought.

Yet a recent survey found about half of the institutional traders responding had experienced front running and slightly more than 40% of the brokers considered it to be a problem.

The survey by Trader Forum showed more than one-third of the traders had experienced brokers exchanging information, which was used for trades that reached the floor of an exchange ahead of the original order.

Investment professionals, meanwhile, are warning brokerage firms to address the situation or suffer the economic consequences.

Both sides "have to sit down and, if there is a problem, recognize the problem . . . then deal with it," said John J. Morton,

# Allegis shifts $1.4 billion

By Chuck Paustian

CHICAGO — Completing a two-year, round-trip passage, Allegis Corp.'s $1.6 billion defined benefit plans have re-entered the capital markets with 11 new investment managers, following an earlier move to cash equivalents from multiple managers in anticipation of plan terminations.

David J. Dykstra, director-pension assets for the Chicago-based parent company of United Airlines, oversaw the most recent hires, which allocated about $1.4 billion among seven equity and four fixed-income managers.

"I'm very happy with the firms we've selected," said Mr. Dykstra. He added the fund's consultant, Frank Russell Co., Tacoma, Wash., provided information on various firms, but the review and selection process was conducted internally.

Mr. Dykstra declined further comment on the restructuring.

The equity managers hired were Cambiar Investors Inc., Englewood, Colo.; First Manhattan Capital Management, McCowan Associates Inc. and Weiss, Peck & Greer, all in New York; Hotchkis and Wiley, Los Angeles; Lincoln Capital Management Co., Chicago; and Sit Investment Associates Inc., Minneapolis.

The fixed-income managers hired were Sanford C. Bernstein & Co. Inc., W.R. Huff Asset Management and J.P. Morgan Investment Management Inc., all in New York, and Pacific Investment Management Co., Newport Beach, Calif.

The amounts allocated to each of the new firms were not available. According to data provided by Allegis, the defined benefit plans had $1.8 billion in assets as of Sept. 30, of which $792 million was in equities and $630 million was in fixed income.

As a result of the markets' turmoil during October, total defined benefit assets declined 11.1% to $1.6 billion as of Nov. 1.

The assets given to the managers apparently came from a $700 million stock-index fund run by Wells Fargo Investment Advisors, San Francisco, and a $700 million in-house fixed-income portfolio. According to the Allegis data as of Sept. 30, Wells Fargo no longer was listed among the fund's managers, the index fund had been reduced to $300 million and the internal bond portfolio had been eliminated.

The fund's three real estate equity managers — LaSalle Advisors Ltd., Chicago; PMRealty Advisors, Newport Beach, Calif.; and RREEF, San Francisco — apparently were not affected. The three firms run a total of $200 million for Allegis.

Hiring the new managers completes a major task Mr. Dykstra faced when he first joined Allegis in September 1986. Mr. Dykstra replaced Robert J. Gillette, who left to join Russell as vice president-client executive and senior investment consultant.

Allegis, formerly UAL Inc., had released the vast majority of its previous stable of 20 managers and moved the bulk of the pension assets into short-term instruments during the second half of 1985.

Allegis' 1986 annual report shows the pension fund was 86% in cash equivalents and short-term instruments, 3% in common stock and 11% in real estate and other investments.

*Allegis has come full circle, putting $1.4 billion in pension assets back into the markets.*

The changes were made in anticipation of terminating five plans to recoup about $962 million. At the time the terminations were announced, the expected reversion was considered by some

# Execs conflict on crash effect

By Marlene Givant

Senior corporate executives are pushing their pension funds toward more conservative investments because they fear further market volatility, but pension executives are more optimistic.

A comparison of two post-crash analyses underscores the conflict.

A study by Salomon Brothers Inc., New York, says 1987's stock market crash highlights the vulnerability of pension surpluses, which will further catapult the pension fund to the forefront of corporate planning and will lead many funds to more conservative asset allocation postures.

But the analysis by T. Rowe Price Associates Inc., Baltimore, says pension officials are cautiously optimistic about the market and willing to pursue investments from small-capitalization equities to foreign bonds.

Robert D. Arnott, vice president of Salomon and a co-author of the firm's survey of large corporations, said the reports differed because Salomon focused more on views of senior corporate officials worried about their fiduciary responsibilities while T. Rowe Price surveyed pension executives, who balance fiduciary duties and long-term investment planning.

"There is a fascinating dichotomy between the views of pension executives and top management. More typically, top management's fiduciary concerns have a greater impact. We're seeing a pretty widespread shift to conservatism" by top executives, he said.

Pension executives, on the other hand, "have a wide range of views. Where there is a profound shift to conservatism, it is in some instances imposed on pension executives," Mr. Arnott said.

Knee-jerk reactions to fear about the market could have bleak consequences. "This shift has us somewhat uneasy," he said. "It has the risk of becoming a self-fulfilling prophecy."

Views on asset allocation range widely regardless of a plan's funded status; the majority of executives are sitting back and studying the situation, according to Mr. Arnott.

But a surprisingly large minority is taking action, often shifting to conservatism. One radical approach is the reported sale of all stocks held by the pension funds of Rockwell International Corp., Pittsburgh, and Primark Corp., Detroit (*Pensions & Investment Age*, Nov. 30). More typically, funds become defensive by moving 10% to 20% to fixed income from equities.

The Salomon report noted the conservative move began before the crash, independent of market outlook. The report suggested funds evaluate their risk tolerance

# Wall Street earnings to dive

By Marcia Parker

**Although the investment banking industry escaped wholesale downgrades, firms must tighten their belts or face more ratings pressure; story on page 16. E.F. Hutton Group's asset management division will be left intact after the company merges with Shearson Lehman Brothers in January; story on page 17.**

NEW YORK — Wall Street investment banks, already reeling from the stock market crash and industrywide retrenching, will see earnings plunge 35% to 40% by 1991 because of eroding industry economics and the lackluster performance of interest-rate sensitive businesses that once contributed mightily to the bottom line.

"The inherent cyclicality of the investment banking industry, dormant throughout most of the 1980s, is re-emerging," according to an extensive report by Michael Goldstein, who follows the investment banking industry for Sanford C. Bernstein & Co. Inc., a New York investment research and management firm.

"An environment of generally rising interest rates and declining

# Crash a boon to 1 strategy

By Fred Williams

Even though the rest of the stock market was in disarray, domestic securities lending programs produced up to 50% more income than usual during October and November because demand for available securities to cover short positions increased as the market dropped.

In addition, this low-risk way of generating incremental income became even safer during the market crash because the securities lent were overcollateralized.

George Ominski, principal with Capital Advisors Inc., a Lancaster Pa., investment management firm and one of the few non-bank securities lending firms, said income from securities lending programs probably jumped by "half as good again on a month-to-month basis. If they were getting 50 basis points, it was probable they jumped up to 75 basis points following the market action."

Many pension executives were unable to provide hard data on their securities lending programs, explaining there is a two- to three-month lag in receiving figures.

But Ray Fleming, administrator of the $604 million Dallas Employees' Retirement fund, said the fund netted about $15,000 from securities lending in October and November. That represents 37.5% of the $40,000 the fund has earned on the program so far this year.

The fund's program, which involves $20 million to $150 million worth of securities, is limited to U.S. government securities, which Mr. Fleming said are "easier to lend" in the current market environment.

Industry officials believe other pension funds experienced similar income increases from securities lending.

"I would be very surprised if they didn't see a significant spurt in earnings in the October and early November time period," said Nancy Wolcott, vice president for master trust and special services at Harris Trust & Savings Bank, Chicago. "Demand increased and the spreads were up as well, and the brokerage firms were willing to pay a little more in order to cover their positions."

Steven Cox, assistant vice president of DeMarche Associates, Kansas City, Mo., said custodian banks were able to generate additional income "because brokers needed to borrow additional securities to cover short sales at that time, and there probably was a jump in borrowing activity."

Securities lending is a byproduct of increased trading volume during the past 10 years; demand has increased for deliverable securities that are borrowed, for a fee, on a short-term basis. Securities lending transactions usually are handled by custodian banks, with the income split between the bank and the investor. Some pension funds find the returns offset master trust/custodial fees.

When securities are lent, the brokerage normally puts up 102% of the market value of the borrowed securities as collateral, either in cash or in government securities.

As the market value changes, the collateral is adjusted until the transaction is settled.

Because stocks declined dramatically in October, custodial banks found their securities lending programs overcollateralized, making a relatively safe investment technique even more secure, said Mr. Cox.

Cash collateral usually is invested by the custodial bank generating additional income for securities lending with a portion rebated to the brokerage firm. In October, as demand for lendable securities increased, the spreads on short-term money also increased. When the demand for securities jumped, brokerage firms were willing to take smaller rebates, leaving more for the lenders, said Mr. Cox.

As an additional security measure, he said, some bank trustees shifted collateral requirements to 100% cash.

"The only risk associated with it is if the brokerage firm happens to go under, which is a minor risk. Even if they do go under, we still hold 102% of the value of the security," said Louise Graham, vice president and director of master trust services at First RepublicBank Dallas. First Republic has about $12 billion of assets in its securities lending program.

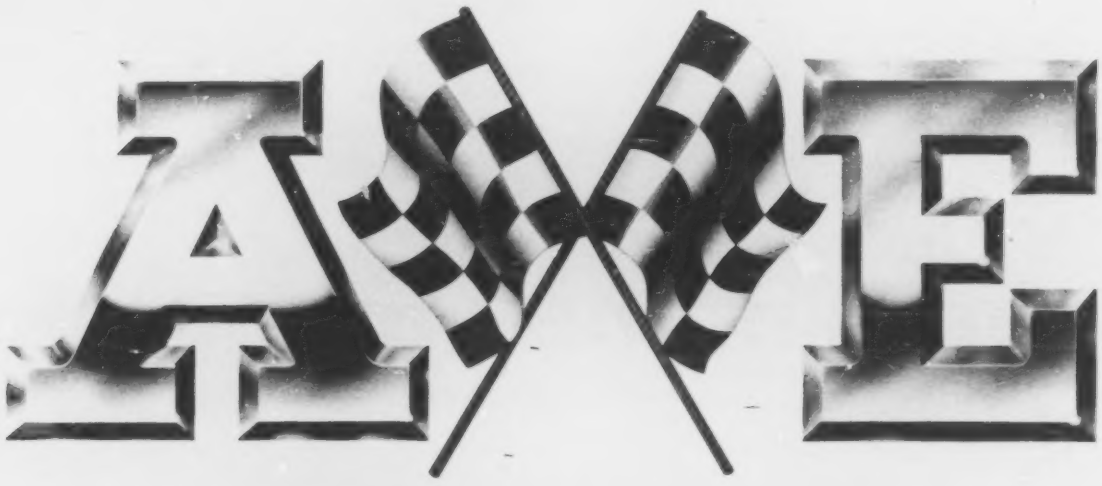
"It is not so much an incremental increase in our overall rate of return, as much as income to offset certain expenses of the fund," said Nathaniel Duffield, chairman of the profit-sharing committee at The Halliburton Co., Duncan, Okla.

Halliburton has hired First RepublicBank for a new securities lending program, which would involve $700 million of the company's $2 billion in employee benefit assets.

"We felt we could generate additional income for the fund at a reduced risk. We don't have a feel yet or an estimate for the type of income it will produce. It really depends on market conditions and on the supply and demand for securities as well as on the specific portfolio mix at the time the securities are loaned. But we felt it would generate enough income to be workable for us," he said. ■

## Corrections & clarifications

- Because of a compilation error, the broad market index returns furnished by **Morgan Stanley Capital International** and reported Nov. 16 were in error. The World index was down 17.1% for October and the Europe Australia Far East index was down 14.1%. Individual market figures were correct.
- **Sunburst Bank** is based in Jackson, Miss. The location was misidentified in the Nov. 16 PIPER listings.
- The investment returns of **MTrust Austin**, Texas, were omitted inadvertently from the Nov. 16 PIPER listings. MTrust's growth fund was up 48.6% for the 12 months ended Sept. 30, ranking it in the top 10% for the period. For three years, it was up 29.5% compounded annually, and for five years it was up 25.5% compounded annually; both figures placed it in the top 25% for the periods.
- **Argus Investment Management Inc.**, Santa Barbara, Calif., which was acquired from Argus Research Group, has investment policy autonomy from Argus Research, although it retains the Argus name under a royalty agreement. The relationship was described incorrectly in the Nov. 16 issue.
- **Alan D. Lebowitz** has been named deputy assistant secretary of program operations of the Pension and Welfare Benefit Administration at the Department of Labor. His new title was reported incorrectly in the Nov. 30 issue.



Winning.

Winning money managers never cross a finish line. Their work is never finished.

At Axe, the checkered flags are for consistent performance that meets the objectives of institutional clients.

For us, the race never ends.

# Earnings . . .

*Continued from page 2*

financial asset prices will narrow the earnings of many investment banking activities," the report said.

The universe of investment banks Mr. Goldstein studied includes Salomon Brothers Inc., Goldman, Sachs & Co., First Boston Corp., Morgan Stanley & Co., Bear Stearns & Co., Kidder Peabody Inc., Dillon, Read & Co. Inc., Lazard Freres, L.F. Rothschild and Wertheim & Co. It does not include Merrill Lynch, Drexel Burnham Lambert Inc., Shearson Lehman Brothers Inc. and Donaldson Lufkin & Jenrette.

The industry's difficulties also stem from the erosion of the level and structure of investment banking in the 1980s. Mr. Goldstein said profit margins have declined 20% to 30% and returns on equity have fallen to 15% from 30% on an equity base that has grown sevenfold. At the same time, the fixed component of expenses has grown to $4 billion from $800 million, increasing the industry's breakeven point fivefold.

"This substantial degradation in the economics of the industry is a direct result of the rising dominance of market-making," Mr. Goldstein's report said.

"The trading and arbitrage of debt and equity securities is now inextricably intertwined with corporate investment banking services. A major position in a wide range of secondary markets is needed to support not only primary issuance, but the reputation and image of the firms themselves."

All these factors will combine to exert enormous pressure on investment banking firm managers in coming years. In Mr. Goldstein's view, the end result is management will assume a greater degree of centralized control and shrink operations to focus on the areas where the firm is strongest.

Interest-rate sensitive businesses he said will be affected by the changing environment — including underwriting, mergers and acquisitions, leveraged buyouts and bridge financing — are the lines of business that contributed most to industry earnings in the past few years.

Despite anticipated cost reductions, the poor performance of these businesses will result in earnings declining 35% to 40% from the 1986 peak and a forecast 1991 trough, Mr. Goldstein predicts.

He expects industry earnings to drop about 15% in both 1987 and 1988, with moderate drops continuing through 1990. The investment banking group currently is valued at 6.5 to 8 times Mr. Goldstein's estimates for 1988 earnings.

A more severe drop is unlikely, he said, because most lines of business move with the credit cycle, some businesses are countercyclical and there is still room for cost cutting.

He said future performance of the major public investment banking firms primarily will be a function of revenue and profit mix and management skill.

His predictions for specific firms include:

- First Boston's earnings will be cyclical with higher interest rates, declining 15% in 1988 and an additional 12% to 15% in 1989. Trough earnings in 1990 should be 45% below 1986's peak levels with a 10% to 15% reduction in total expenses.
- Morgan Stanley's near term earnings also are expected to decline significantly off 1987's peak as bridge financing, related non-investment-grade debt underwriting opportunities and equity underwriting wane. Earnings will fall 20% to 25% in 1988 and an additional 10% in 1989 as interest rates rise and equity markets remain depressed. He expects continued strength in foreign exchange and commodities trading, a significant asset management business and a moderate rebound in debt trading profitability. Trough earnings in 1990 are expected to be 30% to 35% below 1987's peak, contingent on an 8% to 10% reduction in total expenses.
- Salomon Brothers, already hit by the emerging cycle in the industry, is likely to experience the least cyclicality going forward. Earnings should roughly double in 1988 and improve an additional

analysts to be a key component in financing the company's expansion plans.

Separate lawsuits filed by employee groups representing the pilots and flight attendants, however, delayed the reversions. Ultimately, the plans were not terminated.

The inability to recover the surplus pension assets forced company officials to turn to other financing means, including a $243 million issue of common stock during the fourth quarter of 1985.

The decision to forgo the terminations also meant the pension assets would have to be moved out of cash and re-invested in the financial markets.

By the end of September 1986, Mr. Dykstra had placed 44% of the then $1.6 billion defined benefit assets in the stock index fund, 44% in internally managed fixed-income instruments and 12% in real estate equity. ■

THE SWIFT. THE BRILLIANT.

# Earnings . . .

*Continued from page 34*

20% in 1989 as the trading environment improves marginally, and appropriate trading strategies are effected. Earnings should remain essentially flat in 1989-'90 at a level 30% to 35% below the peaks of 1985-'86 as the firm is exposed to cyclical declines in debt underwriting and mortgage finance. Trough earnings 33% below 1985's peak assume a further 10% to 12% expense reduction.

"Investment bank earnings have historically been correlated with large movements in interest rates. It has not been debt trading alone that caused this sensitivity; rather, a wide and growing range of investment banking activities, such as debt issuance, are directly related to rates or are indirectly sensitive, like mergers and acquisitions," Mr. Goldstein's report said.

"We believe a continuance of the rising rate environment, and an associated moderate further decline in the equity markets, will have negative profit implications for underwriting activity, mergers and acquisitions and leveraged buy-out activity, as well as equity market-making profits. In addition, the mortgage finance business should also emerge as quite cyclical with the housing market."

He projects a $200 million pretax loss in 1987 for debt market-making, but looks for the business to recover next year.

"Even in the face of rising rates, debt market-making will recover in 1988-'89 to produce commodity-level rate of return. Trading strategies will be adjusted, and the secular trend toward rising turnover will continue, though at a slower rate," the report said. "We expect a recovery in 1988 that will produce a positive swing of $400 million, without which industry earnings would be down almost 30%."

He said underwriting, especially of debt, has peaked, and earnings from this line of business will drop sharply in 1988.

"We believe a cyclical slowdown in issuance in 1988 will lead to an earnings collapse in the fixed cost intensive underwriting business from $450 million to $500 million in 1987 to about $100 million in 1988. We expect profits to remain at this level in 1988-'89," the report said.

Mergers and acquisitions advisory and financing fees and risk arbitrage profits provided a third of the industry's profit growth in the past several years, Mr. Goldstein noted. He thinks the recent decline in the equity markets may prompt a "bubble in merger and acquisition activity to occur in the near term." But over the longer term, he believes higher interest rates will reduce the level of activity. His forecast is for overall transaction volume to decline to $160 billion in 1988 and $150 billion in 1989 from $180 billion this year. Earnings will fall to $570 million in 1988 and $400 million in 1988 from about $720 million in 1987.

During the next five years, market-making activities are expected to grow in importance relative to other investment banking activities. "The importance of market-making should be further exaggerated by a cyclical decline in underwriting and advisory activities," the report said. "Absent a success of a major new innovation, such as the emergence of a large market for less-developed-country debt or commercial bank loans, we believe the average rate of return from market-making will be limited to a level similar to that normally earned by commercial banks, thereby further reducing overall rates of return."

Historically, commercial banks have made, after tax, 12% to 13% return on equity, Mr. Goldstein said. ■

# Owens-Illinois sub offers mutual funds

By Marlene Givant

TOLEDO, Ohio — Owens-Illinois Inc.'s investment management subsidiary, Harbor Capital Advisors, will offer five new mutual funds to participants in Owens-Illinois' savings plans, plans of other companies and other outside investors.

The five funds will join Harbor's previous offering to form a family of mutual funds spanning several asset classes and investment styles, according to Ronald C. Boller, chairman and director of Harbor and director-benefit finance of Owens-Illinois.

The pioneer fund, Harbor Growth, was formed last December (*Pensions & Investment Age*, Dec. 22, 1986). So far, only 3% of the $100 million mutual fund's assets have come from outside in-

# Budget details pummel funds

By Nicky Robertshaw and Joel Chernoff

WASHINGTON — The budget reconciliation law passed by Congress last week hit defined benefit plans with a double whammy, raising costs for employers and increasing the year-to-year variability of pension fund contributions.

The law, signed by President Reagan Dec. 22, tightened minimum and maximum funding rules, increased the annual premium employers must pay to the Pension Benefit Guaranty Corp. to between $16 and $50 per participant from a flat $8.50, and reduced the period over which past-service liabilities and experience losses in pension funds can be amortized.

The legislation, however, lacks key provisions that would have allowed employers to recoup surplus pension assets without terminating their plans; it also is missing provisions requiring a portion of the surplus to be allocated to plan participants.

The legislation has its greatest impact on sponsors of poorly funded defined benefit plans. It increased pension contributions, premium payments and potential liability to the PBGC and plan participants. It also may affect their creditworthiness.

But the legislation will hit all employers, such as those who flip in and out of the narrowed minimum and maximum funding ranges.

The new funding rules are creating a "Goldilocks effect," explained Henry Savath, vice president at A. Foster Higgins Co., the employee benefit unit of Johnson & Higgins, New York. "It can't be too great, it can't be too little, it has to be just right."

Many of the details of the rules were not available at press time. But major provisions are:

- Tougher minimum funding rules will accelerate funding for some employers. Past-service liabilities will have to be funded within 18 years, instead of the current 30 years. Also, experience gains and losses will have to be amortized during five years, instead of the current 15 years. Faster funding rules will apply to underfunded plans.
- Employers will lose deductibility for contributions when funding exceeds 150% of termination liability. The Internal Revenue Service, however, is required to issue regulations altering the limit for employers whose funding would be distorted by such a rigid limit, such as those with very young work forces whose permissible contributions would be sharply reduced under the 150% rule.
- Employers will have to make quarterly payments on their pension contributions; current rules give companies up to 8½ months after the end of the plan year. Estimated payments will be made when the actual contribution has not yet been determined.
- The number and the availability of funding waivers to employers will be limited and amortization of the waived payment will be spread over five years rather than 15 years as now required.
- The ability to terminate an underfunded plan will be further restricted. Under legislation passed in 1986, an employer could dump its underfunded plans on the PBGC under several conditions, including a filing under federal bankruptcy code. Now, the employer also will have to prove financial hardship or meet other criteria. Also, employers terminating underfunded plans

# LDC debt's fallout

## Banks' woes could hurt asset-backed ratings

By Jacqueline Dutton

A new wave of concern over the health of U.S. banks burdened by Third World debt is threatening to knock billions of dollars worth of asset-backed securities supported by those banks down the ratings ladder.

The ability of the banks to ensure payment on pools of asset-backed securities is being challenged by Moody's Investors Service Inc., New York, which recently placed more than $6 billion of investment-grade, asset-backed securities on its "structured-finance watchlist" for possible downgrading.

As a result, institutional investors, who are big buyers of asset-backed securities, may feel compelled to unload those issues and may have to pay more for high-quality issues to replenish their portfolios. Many institutional investors are barred from investing in anything but the highest quality issues.

William F. Quinn, assistant treasurer at American Airlines, Fort Worth, Texas, said the value and risk characteristics of the underlying securities and issuers of securities are most important in rating the quality of asset-backed securities.

But Mr. Quinn said a downgrading caused by the banks that support the securities could force him to sell the $3.2 billion fund's $100 million in mortgage-backed securities if the ratings fell below investment grade.

He noted the secondary market for "fallen angels" is weak. He also warned wholesale downgrading of structured financings backed by banks exposed to LDC debt could mean higher prices for investment-grade issues.

But David Bronner, chief executive officer of the $6 billion Retirement Systems of Alabama, Montgomery, said a bank credit-related downgrading would do little damage to the high-quality, low-risk type of mortgage-backed securities portfolio managed by his staff. Mr. Bronner could not break out the amount his fund held in mortgage-backed securities.

Mr. Bronner said for a highly diversified, long-term portfolio, the banks' role as an insurer is not as important as it is for a new issue upon which little principal has been paid.

He said if the credit-providing bank "hit the wall" because of LDC debt, the effect on the quality of a four- to seven-year pool with a high loan-to-value ratio would be minimal.

Issuers of asset-backed securities say the potential downgrades undermine the market for otherwise low-risk investment pools, and as a result they

*Continued on page 41*

# Firms shielding cash portfolios

By Chuck Paustian

Confronted with an uncertain economy, companies with large cash reserves continue to play it safe.

And those that do take advantage of the vast size of the cash portfolios — using a portion of their portfolios for higher-yielding instruments and turning to outside investment firms — may return to the safe harbors of more traditional investments after recent market volatility.

Significant amounts of surplus corporate cash present a financial executive with two options — use the cash to meet the company's capital needs and curtail external financings or keep the funds as a reserve and continue to pursue borrowing opportunities.

As a result, corporate executives attempt to preserve this maneuverability, often being willing to forgo enhanced performance in favor of safe, liquid investment vehicles, such as domestic commercial paper, bankers acceptances, Treasury bills and certificates of deposit. The investments usually are managed internally.

When Chicago-based Amoco Corp. decided to repurchase some of its stock, company officials decided to draw the necessary funds from the corporate coffers rather than further leveraging the company by borrowing, according to John J. Murray, director of short-term investing and borrowing.

Amoco has purchased 34.6 million shares of stock at a total cost of $2.043 billion. As of Sept. 30, the company's cash and short-term investments totaled $1.361 billion, up from $772 million a year earlier.

American Telephone & Telegraph Co., New York, has been able to curtail some of its financings, having amassed a cash position of $2.91 billion as of Sept. 30, the result of strong cash flows during the past several years.

David W. Reiss, corporate assistant treasurer, said the cash position "permits the company to go into the markets when it wants to, rather than being forced into it," he added.

Mr. Reiss added AT&T does maintain a presence in the market through a commercial paper program, which ranges between $200 million and $400 million.

T.P. Townsend, an assistant treasurer at Exxon Corp., New York, said the company's $3.02 billion cash position allows company executives to be more selective in its financing.

"At the time we had $3 billion in cash, we were borrowing both short- and long-term all around the world," he said. "As an attractive opportunity comes along, we'll borrow and maybe repay some more expensive borrowings.

"We continually look for opportunities and actively manage the debt," he added.

James Lyness, manager-market strategy and cash forecasting at Chevron Corp., San Francisco, said the company uses a similar strategy. While Chevron's $3.556 billion cash portfolio is used to service the company's debt, executives are constantly looking for more attractive opportunities.

"If you saw interest rates rising, you might do some swaps or term financing to lock in the current rates and not have to pay higher rates six months from now," Mr. Lyness said.

He added the cash also serves as a hedge against rising interest rates for Chevron's floating-rate debt, much of which was incurred as a result of the merger with Gulf Oil Corp. He said enhanced in-

# Plans boost real estate capabilities

By John Covaleski

As pension fund investments in real estate have grown, so too has their executives' involvement in real estate investment decision-making.

Although several dozen pension funds have one or more specialized real estate investment staff members to oversee the fund's outside real estate managers, some are creating internal real estate operations that analyze deals brought to them by outside managers or, in a few cases, find and make the deals themselves.

**Real estate**

Among the leaders:

- The pension fund of General Electric Co., Stamford, Conn., is the grandaddy of internal real estate departments. Operating since 1953, the 10-person staff is responsible for a $3 billion real estate portfolio, about evenly divided between solely owned properties and partnerships with developers and other investors. No outside managers are used.
- A 20-member staff at the State Teachers Retirement System of Ohio, Columbus, seeks and closes on property either co-invested with other pension funds or acquired solely by the fund. Ohio Teachers, which has $1.3 billion in real estate, also has some money in commingled real estate pools for diversification.
- Tom Hassard, real estate investment director and sole real estate staff member of the Virginia Supplemental Retirement System, Richmond, analyzes deals from non-discretionary managers and has begun entering the fund into its own development deals. He now is soliciting construction bids for the fund's first independent project, a $6 million parking garage.
- The staff at American Information Technologies Corp., Chicago, with $700 million in real estate, seeks and structures its own deals, primarily as joint ventures with developers or in co-investments with other pension funds. It also does a full internal analysis of deals brought in by managers. Tom Thompson, director of real estate investments, works on the fund full time and uses the services of the fund's analysts.
- The three-person staff of the Florida State Board of Administration, Tallahassee, reviews all proposals from its managers, who do not have discretion. The board has $650 million in real estate.
- Until this year, the five-member real estate department at the Wisconsin Investment Board, Madison, had been charged with finding its own investments for its $350 million real estate portfolio. Now, the staff analyzes and oversees investments from managers hired on a non-discretionary basis.
- The five-member staff at the California State Teachers' Retirement System, Sacramento, analyzes the deals of managers without discretion.

*Continued on page 40*

# State funds mortgages

By John Covaleski

HARTFORD, Conn. — The $5.3 billion State of Connecticut Trust Funds will invest $800 million in commercial mortgage loans during the next five years in what could be the first step in a trend of pension funds moving more heavily into commercial mortgage lending.

David Hartzell, a vice president of real estate research at Salomon Brothers Inc., New York, said a large-scale pension fund movement into commercial mortgages is expected because real estate debt has been outperforming real estate equity and because commercial mortgages, if structured correctly, provide added diversification and a safe yield.

Specific figures comparing the performance of real estate debt to real estate equity were not available, but preliminary findings of a report show superior debt performance, Mr. Hartzell said.

Assets for the commercial mortgage loans will come from the Connecticut funds' fixed-income portfolio, which as of Oct. 31 accounted for 39% of total assets, or $2.1 billion. The fund is looking for mortgages of five to 10 years with yields 100 to 120 basis points higher than Treasury bills of the same maturity, said Robert A. Staley, investment officer-real estate.

This action represents the fund's first investment in commercial mortgage lending. It has, however, originated mortgages on in-state residential property and has about 1% of its assets, or $53 million, invested in mortgage-backed securities issued by the Government National Mortgage Association and the Federal Home Loan Mortgage Corp.

Mr. Staley said his fund may be interested in ultimately packaging and selling parts of the commercial mortgage portfolio it builds. In March, the fund issued $252 million in collateralized mortgage obligations from its in-state residential mortgage portfolio (*Pensions & Investment Age*, April 6).

Connecticut's commercial mortgage fund will consist primarily of fixed-rate mortgages without ratings, but could include participating mortgages if the participation does not exceed 50% of the property's cash flow, Mr. Staley said. Mortgages with more than 50% participation would be considered part of the fund's real estate equity portfolio, he said.

The commercial mortgage portfolio will represent about 10% of the Connecticut fund's total assets by the time it's fully funded.

Investment managers hired for the portfolio also will have property management ability in case of problems with payments, Mr. Staley said. "We will not lend on any properties that we wouldn't want to own," he added.

The portfolio's first mortgage has been closed on an undisclosed Phoenix, Ariz., property in a deal arranged by Aldrich, Eastman & Waltch, Boston.

Rosalie J. Wolf, principal at Aldrich, Eastman & Waltch, said

# Slow growth seen for '88

A majority of economists surveyed by *Pensions & Investment Age* expect slow to moderate economic growth to continue in 1988.

However, several expressed concern Congress could derail that growth with ill-advised trade legislation, which some thought could bring on a worldwide recession.

And one — Irwin Kellner, chief economist at Manufacturers Hanover Trust, New York — declared a recession already had begun, and predicted real economic growth next year would be zero in the first half and −1.9% in the second.

Mr. Kellner said he believed the recession already had begun because consumer spending, which is two-thirds of the gross national product, is lower than a year and a half ago, and the rise in GNP this year has been mainly on the production side. A lot of it is for inventory, he said.

In addition, the leading indicators were flat in September, down in October and down in November, he said, and fiscal policy had been tight, with the deficit dropping by one-third in the fiscal year ended Sept. 30. Interest rates are still higher than a year ago, and auto sales have declined, as have housing starts.

### Recession

While not as gloomy as Mr. Kellner, three other economists said there was a 50% chance or better of having a recession in 1988.

Thom Brown, chairman of the investment policy committee at Butcher & Singer Inc., Philadelphia, and Ken Safian, president of Safian Investment Research Inc., New York, both said there was a 60% chance of a recession in 1988, and Robert Dederick, executive vice president and chief economist at Northern Trust Co., Chicago, said the chance of a recession was 50%.

Key in Mr. Brown's expectation of a recession is the belief Congress will do "something stupid," such as enact protectionist trade legislation. Such legislation "would be nuts" he said, but added: "Never underestimate what a politician will do in an election year."

Mr. Safian also was concerned a continued weakening of the dollar might prompt protectionist trade legislation in the United States.

Those concerns were echoed by several of the economists interviewed.

John Rutledge, chairman of Claremont Economics Institute, Claremont, Calif., said there was a danger of a "trade meltdown" if the United States enacts restrictive trade legislation and other countries responded.

A related danger, he said, is a boycott by foreign investors, making financing of the budget deficit more difficult. "We have treated foreign investors abysmally," Mr. Rutledge said.

David Bostian, president of Bostian Research Associates, New York, who expects 3.6% growth in the first half of 1988 followed by 3.8% growth in the second, is also concerned about protectionism. "If the trade deficit doesn't improve, it could precipitate protectionist trade legislation, which could slow economic growth," he said.

### Economic growth

Despite the concerns, the majority of the economists expected slow to moderate growth in the economy, with most expecting stronger growth in the second half.

The most optimistic was David Levine, chief economist at Sanford C. Bernstein & Co., New York, who predicted a 6.7% GNP growth rate in the first half followed by a 4.3% growth rate in the second half.

Mr. Levine based his optimistic predictions on the fact "inventories have gotten to be very lean, relative to demand." Because of this, he expects an upswing in inventory building and capital spending. In addition, the economy will be helped significantly by an increase in foreign trade, which will offset any increase in interest rates, he predicted.

Mr. Bostian was optimistic because in recent years companies have been modernizing equipment and trying to lower their break-even points, and an increase in orders could result in market profitability improvements.

Lacy Hunt, chief economist at Carroll, McEntee & McGinley, Philadelphia, also predicted GNP would grow at a 3.6% annual rate in the first half of 1988, dropping slightly to a 3.2% rate in the second.

Mr. Hunt said the economy in 1988 would be export driven, and corporate spending will be buoyed by strength in exports and heavy industry, which will more than offset weakness from housing and consumer durables. Exports and capital spending account for 24% of GNP, he said, while housing and consumer durables account for only 15%.

### Inflation

Most of the economists expected inflation in the first half of the year to be 3.5% or more and to worsen in the second half. Eleven of the 16 interviewed expected inflation to increase to 4.5% or more in the second half.

Mickey Levy, senior vice president and chief economist at Fidelity Bank, Philadelphia, sees lower inflation — 3.5% — in the first half of 1988, rising to 5% in the second half. The low inflation in the first half is the result of lower oil prices, he said, while the acceleration in the second half is because of higher interest rates and stronger production.

Mr. Hunt also looks for higher inflation in the second half — 6% — because labor markets, which already are tightening, will continue to do so, and imports will also boost inflation. In addition, he expects a

# Fiduciary duty in mergers eyed

**By Brad Rudin**

CHICAGO — Whether Duff & Phelps Inc. breached its fiduciary duty to an employee stockholder by failing to disclose merger negotiations will be decided early next year by a federal court jury.

This case, along with a related one for which a Supreme Court review is being sought, could shed light on when, during negotiations, a closely held corporation has a duty to disclose the talks to selling shareholders.

While a publicly held corporation may keep silent about a merger agreement until the price and structure of the deal is agreed upon, privately held companies must disclose the negotiations before price and structure are decided. The decision to sell the company as well as the status of those negotiations, however, must be made only to the person considering selling stock.

Whether the negotiations were material to an employee's decision to sell the stock is the question.

The Duff & Phelps' case suggests the officers of closely held corporations should proceed cautiously when they are in simultaneous negotiations with employees who are selling their stock and other corporations interested in buying the company.

"I don't think it takes very much common sense to say 'maybe we ought to be taking a look at this,' " said Richard C. Leng, a Chicago lawyer who is representing Donald J. Guy, the former Duff & Phelps employee.

Mr. Guy contends his decision to leave Duff & Phelps would have been influenced by information about merger negotiations, which — if successful — would have boosted the stock's value.

Under the stock purchase agreement, employees had to sell their shares back when they left.

Mr. Guy left Duff & Phelps in 1983, not knowing Chairman Claire Hansen was negotiating a merger agreement with Security Pacific National Bank, Los Angeles. That agreement fell through in 1985. Soon after, the company was sold to an employee stock ownership plan.

Mr. Guy's departure from Duff & Phelps was sparked by a dispute with Mr. Hansen over a commodities trading business, which Mr. Guy said he would not abandon. Mr. Hansen then terminated Mr. Guy's employment.

Mr. Guy received book value for the 200 Duff & Phelps shares he held. The difference between the book value and the price offered by Security Pacific should be the basis for determining the damages awarded to Mr. Guy, Mr. Leng said. Damages will be considered by a jury when the trial begins in May.

A federal district judge threw out Mr. Guy's suit in 1985, but withdrew that dismissal Oct. 23 because of a March 1987 appellate case — also involving a former Duff & Phelps employee — that held a closely held corporation has a fiduciary duty to disclose material information to investors from whom it purchases company stock. ■

## Corrections & clarifications

• Chuck Rawlins, assistant treasurer at Georgia Power Co., Atlanta, was identified incorrectly as chairman of the **National Corporate Cash Management Association** standards committee. Mr. Rawlins heads the standards committee task force on account analysis. Raymond L. Cushing, corporate cash manager at Nordson Corp., Amherst, Ohio, is chairman of the standards committee.

• The investment returns of **MTrust Dallas** were omitted inadvertently from the Nov. 16 PIPER listings. MTrust's growth fund was up 48.6% for the 12 months ended Sept. 30, ranking in the top 10% for the period. For three years, it was up 29.5% compounded annually, and for five years, it was up 25.5% compounded annually; both figures placed it in the top 25% for the periods.

Some things in life demand total expertise.

A real estate appraisal is one of them.

Thousands or often millions of dollars can ride on a single appraisal. So expert knowledge, experience, ethics and professionalism are a must. That's why, for over fifty years, government agencies, courts, financial institutions, real estate investors, developers and brokers have all relied on appraisals by an MAI or RM—certified members of The Appraisal Institute. Only 3% of all appraisers in the U.S. have qualified. Next time you need a real estate appraisal, demand an MAI or RM. You'll get total expertise.

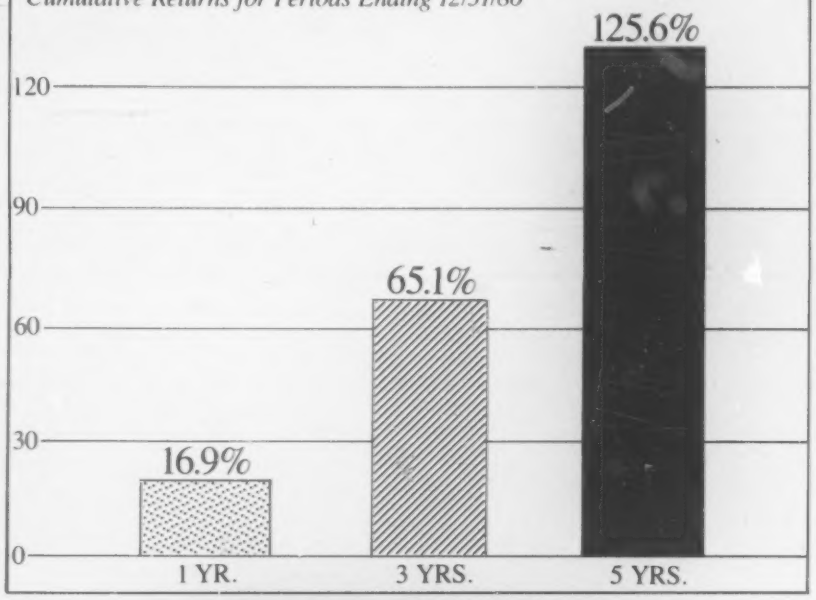
*General American's Publicly Traded Bond Fund*
*Cumulative Returns for Periods Ending 12/31/86*



# QUALITY PERFORMANCE

**Over the five-year period ending on December 31, 1986, our Publicly Traded Bond Fund outperformed more than 70% of all the fixed income funds of banks and insurance companies included in the P.I.P.E.R. universe.**

Over the same time period, the Fund also produced results substantially in excess of Shearson-Lehman Government/Corporate Intermediate Term Bond Index.

This Fund has achieved remarkable performance while, at the same time, utilizing sound, conservative management techniques.

**Fund features**

- High Quality — Over 95% of the portfolio rated A or better.
- Intermediate Term — Avoids the fluctuations normally associated with long-term bonds.
- Duration Management — Designed to dampen downside volatility resulting from increasing interest rates.
- Complete Liquidity — Fund valued and available for transfer daily.

If your objective is the same as ours — outstanding performance from a quality investment — let's talk. **Call Ron Drury, Sales & Marketing Vice President-Group Pensions, at (314) 444-0778.**

PORTFOLIO MANAGERS:

EXECUTIONS DON'T HAVE TO BE CAPITAL PUNISHMENT.

DON'T RISK OFF-FLOOR TRADES. GET THE POWER OF PIT-VANTAGE™.

The Crash of '87 is convincing proof! The risk in trading financial futures off-the-floor (with or without stops) is a risk you should not be taking in today's triple-digit volatility. You need pit-originated trading expertise.

In these erratic markets, fast and accurate order executions are critical to your hedging needs. Now, more than ever, pit presence makes the difference between hedging strategy and execution success. With Haigh Financial's team of professional floor traders you get the pit presence you need for quality, confidential executions with minimal slippage.

Our vantage point in the trading pits is called PIT-VANTAGE™. It identifies the pit advantage we offer your financial futures and options executions. PIT-VANTAGE™ provides the institutional client customized floor execution and hedging program strategies under direction of Barry C. Haigh, Chairman.

We don't hold futures positions overnight. So, we avoid the risk of waking up to bad news, and margin requirement increases don't affect our performance.

You are urged to learn the unique advantages available to you through the power of PIT-VANTAGE™. To discuss your specific financial futures execution needs in confidence, please contact Jim Patterson, President.

# VANGUARD OFFERS "RELATIVE PREDICTABILITY" IN TODAY'S VOLATILE MARKETS.

The Vanguard Group offers "relative predictability" to investors in both the stock and bond markets through:

- **Vanguard Index Trust**—mirrors the Standard & Poor's 500 Composite Stock Price Index*, and is the nation's first no-load stock index mutual fund. We also offer an indexed commingled fund for employee benefit plans.
- **Vanguard Quantitative Portfolios**—uses a series of computer models to evaluate more than 3,500 securities. The Portfolio seeks to outperform the S&P 500 Index while maintaining the investment characteristics of the Index.
- **Vanguard Bond Market Fund**—seeks to replicate the Salomon Brothers Broad Investment-Grade Bond Index**, which consists of government, corporate and mortgage-backed securities.

Vanguard provides investors competitive investment performance at low cost. We will even tailor separately managed index funds to suit your needs. Please contact:

Sally Hudson,
Director of Institutional Marketing Services
Vanguard Financial Center
Valley Forge, PA 19482

**1-800-523-1036 ■ 1-800-222-1972 (PA)**

THE Vanguard GROUP OF INVESTMENT COMPANIES

*Over 58 Years of Service to Investors • Over $30 Billion In Assets*

Chicago Board of Trade

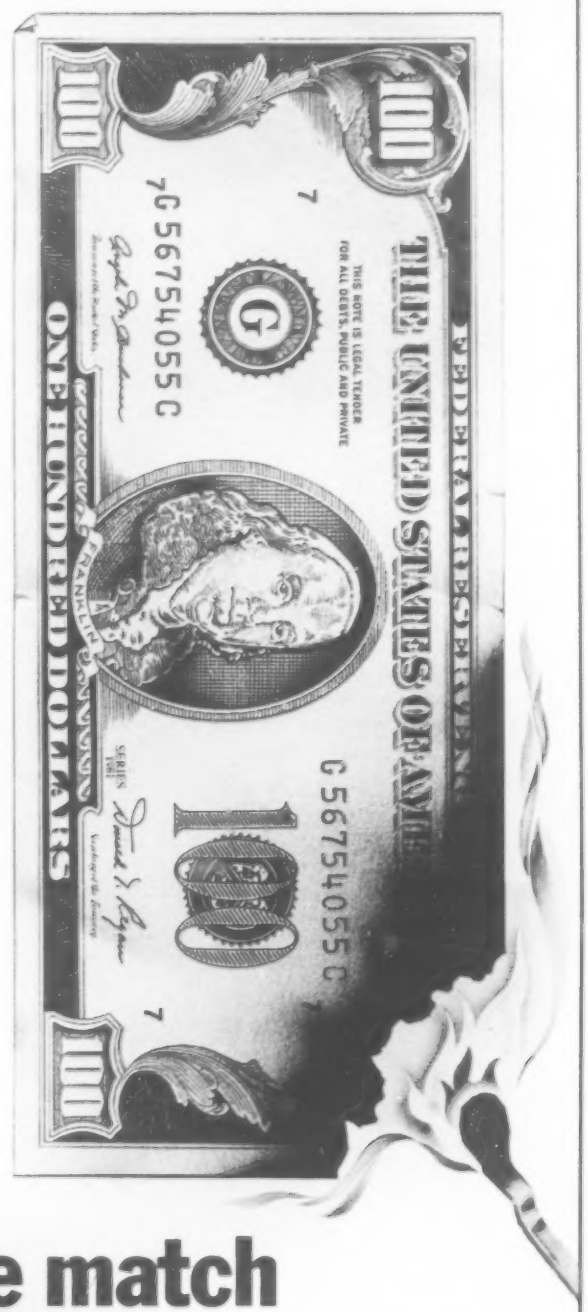
**Treasury Note and Bond Futures and Options. Interest rate risk management for people who don't have money to burn.**

You need to protect yourself from interest rate volatility. But you also need to protect your bottom line. And you could be paying too much for your interest rate risk management when you depend on customized protection. Chicago Board of Trade T-Note and T-Bond Futures and Options can often meet your money management objectives just as effectively. At a much lower cost.

Why pay for custom protection you may not really need? Learn more about CBOT Treasury Note and Bond Futures and Options. Because you could get burned from a custom match.

Ask your broker for more information or call 1-800-THE-CBOT, ext. 5010.

© 1987, Chicago Board of Trade



**A custom interest rate match strikes where it hurts.**

# People

## Corporate

Procter & Gamble Co. has elected two officers. **Edwin H. Eaton**, former vice president and treasurer, was named vice president and comptroller. **George M. Gibson**, former vice president and comptroller, was named vice president and treasurer. The moves represent an exchange of responsibilities to broaden the experience of both officers.

The Monsanto Co., St. Louis, has announced corporate changes. **B. Clare Harris** has been promoted to vice president and controller. He has been with Monsanto since 1973, most recently as treasurer. He will be responsible for financial reporting and controls, budgeting, analysis and maintaining accounting records.

**Juanita H. Hinshaw** succeeds Mr. Harris as treasurer. She will be responsible for corporate finance, cash management operations, risk management, foreign exchange and corporate real estate. Ms. Hinshaw has been with Monsanto since 1984 when she joined as assistant treasurer.

**Lawrence B. Skatoff** has been appointed vice president-finance. His responsibilities include pension asset management, corporate acquisition and divesture activities along with internal and external financial reporting. Mr. Skatoff joined Monsanto in 1972 as assistant corporate controller.

## Managers

**Richard J. Rice** has been named senior vice president of Cedar Hill Associates Inc., Chicago. Mr. Rice formerly was president of Rodman Properties and senior vice president of Rodman & Renshaw Inc.

**Herringer**

Ariel Capital Management Inc., Chicago, has promoted **Nancy L. Herringer** and **Darice M. Wright**. Ms. Herringer, formerly a research analyst/portfolio manager, was named executive vice president. Before joining Ariel in 1984, she was an investment broker for William Blair & Co. Ms. Wright, formerly director of marketing and client services, was named senior vice president. Before coming to Ariel in 1984, Ms. Wright worked as an investment broker for Dean Witter.

**Wright**

**Frank L. "Chip" Gillis** has been named senior vice president-pension marketing for Southwestern Life Insurance Co., Dallas. He will be responsible for the company's pensions and annuities unit, including marketing of all fixed and variable annuities and group pension products.

**Phillips**

ASB Capital Management Inc., Washington, the investment subsidiary of American Security Bank, has announced the appointment of **Robert M. Phillips** as senior vice president responsible for the money management department. Mr. Phillips had been vice president in charge of investment counseling for Maryland National Bank; he joined ASB as a result of the trust division consolidation of American Security Bank and Maryland National.

Constitution Capital Management Co., a subsidiary of Bank of New En, Ltd Corp., has named **Harry Sterling Jr.** senior vice president, managing director and director of marketing. Before joining Constitution Capital Management, he was director of client services for State Street Bank and Trust Co.

**Robin R. Pinkham** has joined Hutton Capital Management as senior portfolio

# People

manager and vice president of E.F. Hutton & Co. Before joining Hutton, Ms. Pinkham managed the in-house pension fund at National Forge Co.

**Marshall Rauccl Jr.** has joined Norstar Investment Advisory Services Inc. as vice president and marketing director. In his new position, he will coordinate all marketing and sales activities for Norvest.

**Richard L. Deeter** has joined Harris Bank, Chicago, as vice president in the trust department. Mr. Deeter, formerly trust vice president at the First National Bank of Chicago, now is a sales executive for the bank's master trust services to U.S. corporations and institutions.

## Real estate

Skram

ASB Capital Management Inc., Washington, the investment subsidiary of American Security Bank has named **John Skram** vice president of real estate investments. Mr. Skram had been general manager of Prudential Bache for six years prior to joining ASB. He will be responsible for originating new real estate investments and managing real estate investment portfolios.

Lowman

**Paul R. Lowman** has been named director of real estate investments. Before joining ASB, Mr. Lowman was executive vice president and general manager for real estate investments at General Electric Credit Corp. At ASB, Mr. Lowman will serve as an investment adviser for pension fund trustees regarding investment opportunities.

**Richard J. Astoreca** has joined the property management division of Albert B. Ashforth Inc. as senior vice president of finance and administration. He will be responsible for all accounting, management information systems and administrative functions.

Prior to joining Ashforth he served as vice president of finance and chief financial officer for GHA Lock Joint Inc. of New Jersey.

## Organizations

The Profit Sharing Research Foundation has elected new officers. They are: Chairman **John W. Cooper**, vice president, Harris Trust and Savings Bank; Vice Chairman **Mary Ann Lambertsen**, vice president-human resources, Fisher-Price; and Treasurer **Thomas Young Jr.**, president, Young Electric Sign Co. **David Wray**, president of the Profit Sharing Council of America, was named executive director and secretary.

**Gilbert L. Beebower**, executive vice president of SEI Corp., was named to the Presidential Task Force on Market Mechanisms. The task force is analyzing the causes of the Oct. 19 stock market crash and identify any problems that might threaten the short-term liquidity or long-term solvency of the markets. Other panel members include **Nicholas F. Brady**, chairman of Dillon Read & Co.; **Howard M. Stein**, chairman of Dreyfus & Co.; and **Robert G. Kirby**, chairman of Capital Guardian Trust Co.

**David J. MacKenzie** has been named president and chairman of the board of the International Foundation of Employee Benefit Plans, based in Brookfield, Wis. Mr. MacKenzie is executive director of the Textile Rental Services Association. **Gerald A. Mele** was named president-elect; he is president and chief executive officer of TEDRO and Associates Inc. **Walter J. Butler** was named secretary; he is international vice president of the Service Employees International Union. Named treasurer was **Charles W. Breitsman**, executive director of Laurel Mechanical Contractors Association Inc.

Earlier, the foundation named **Ardyce Myhre** the director of education. Ms. Myhre, who joined the foundation in 1970, will be responsible for all aspects of foundation educational programs.

A SunTrust Bank

# Divested returns scattered

By Trudy Ring

NEW YORK — South Africa-free equity portfolios underperformed the Standard & Poor's 500 stock index for periods ended Sept. 30, according to The Brian Rom Co., a consulting firm.

However, the divested portfolios outperformed median actively managed unrestricted portfolios in some periods.

In the third quarter, the median South Africa-free portfolio in the Rom universe returned 6% to the S&P 500's 6.6%. The South Africa-free version of the index matched the median portfolio's return.

The median unrestricted portfolio, as measured by the Wilshire Cooperative Universe of Wilshire Associates, Santa Monica, Calif., returned 5.6% in the quarter.

For the year ended Sept. 30, the median South Africa-free portfolio returned 33%, compared with 42.8% for the full S&P 500 and 39.5% for the index minus stocks of companies with South African operations. The median unrestricted portfolio in the Wilshire universe returned 33.8%.

For the three years ended Sept. 30, the median South Africa-free portfolio returned 27.5% on a compound annual basis, compared with 29% for the full index and 27.2% for the South Africa-free index. The median unrestricted portfolio returned 25.7%.

The Rom South Africa-free universe consists of 70 portfolios run by 37 managers. Of the portfolios, 37 are fully divested of South Africa-related stocks and 33 are partially divested. There are 66 actively managed portfolios and four passive ones. The portfolios have $6.4 billion in assets.

Some managers of South Africa-free portfolios outperformed the S&P 500 significantly. Ariel Capital Management Inc., Chicago, was tops in the third quarter and the three-year period, with returns of 14.1% and 33.6% respectively.

Ariel specializes in high-quality, undervalued companies that have been ignored by the market, said John W. Rogers Jr., president. Managing South Africa-free portfolios isn't a problem, he said, as Ariel generally doesn't invest in companies with distant geographic operations.

Ariel's third-quarter performance benefited from holding two companies that were the subject of takeovers: **G. Heileman Brewing Co.**, which agreed to be acquired by Bond Corp. Holdings Ltd., Perth, Australia, and **Kenner Parker Toys**, which agreed to be bought by Tonka Corp., Minnetonka, Minn.

Provident Investment Counsel Inc., Pasadena, Calif., topped managers for the 12 months ended Sept. 30 with a 47.8% return.

Provident Investment is a growth-oriented, bottom-up manager that tends to be in domestically oriented companies anyway, so a South Africa restriction doesn't affect it significantly, said Jeff Miller, executive vice president.

Good performers during the year ended Sept. 30 included technology companies such as **Digital Equipment Corp.** and **Apple Computer Inc.**

Early in the period, retail stocks were good performers, Mr. Miller said; one that did well for Provident Investment was **The Limited Inc.**, which the firm has since sold. ■

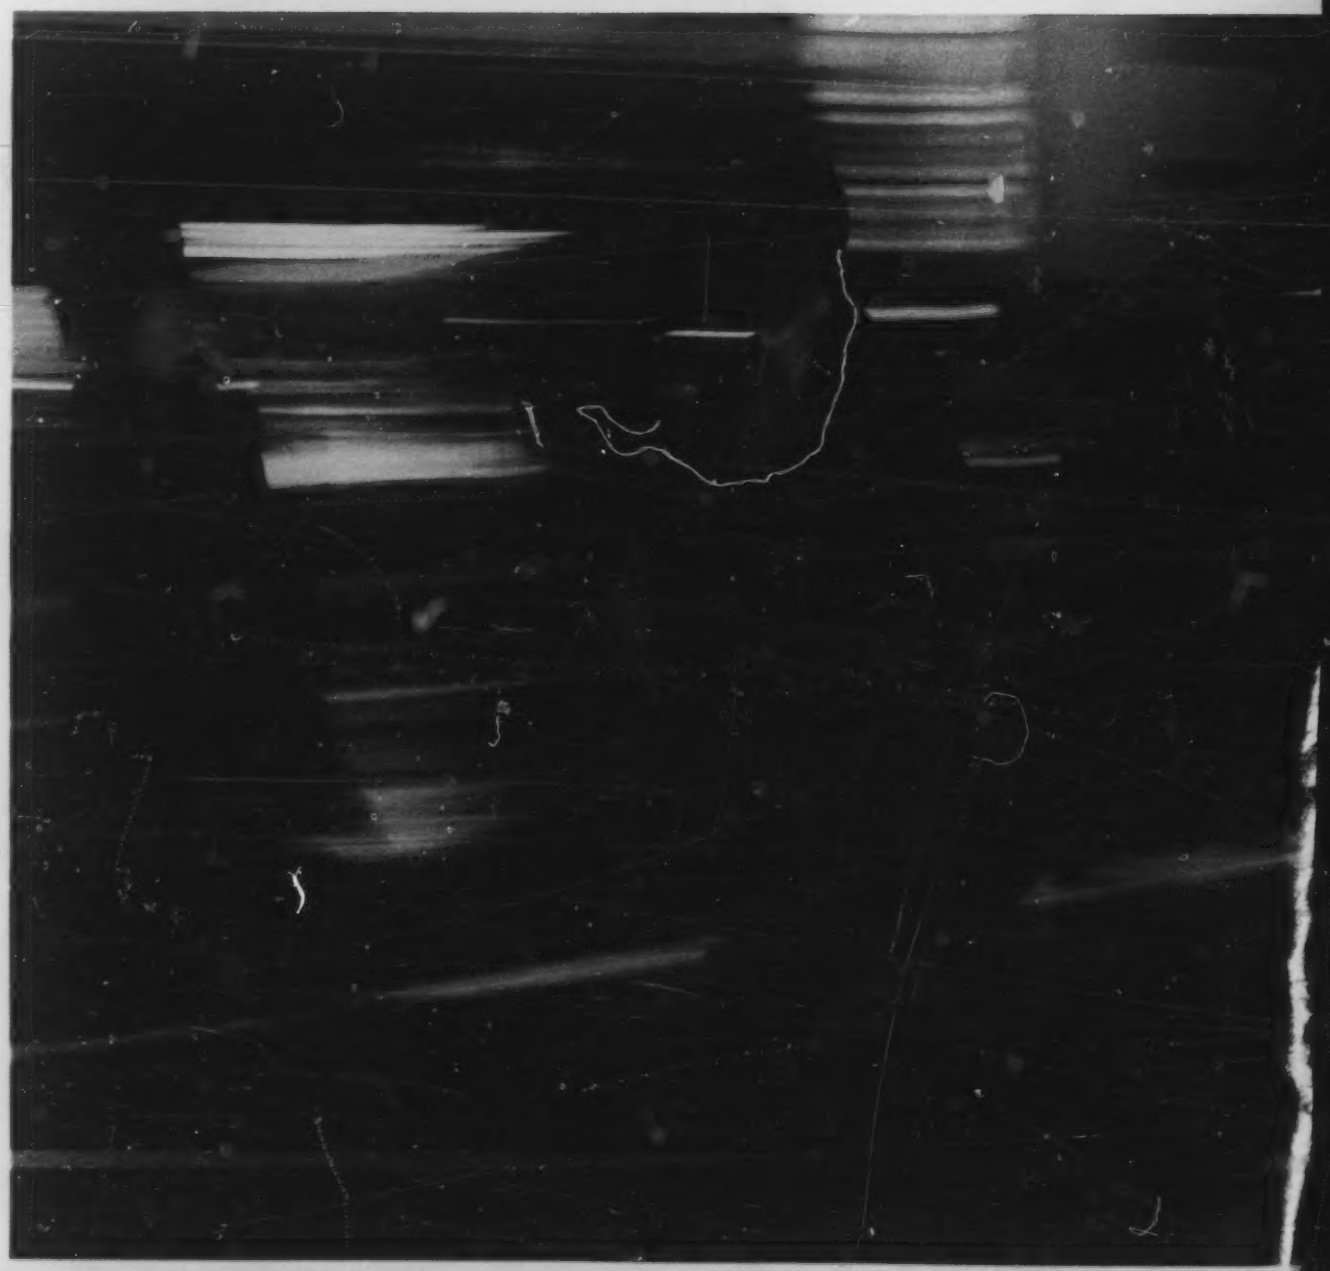
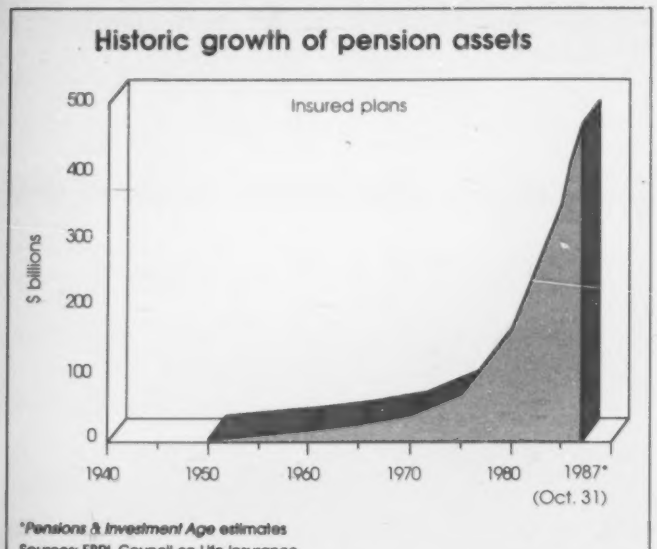
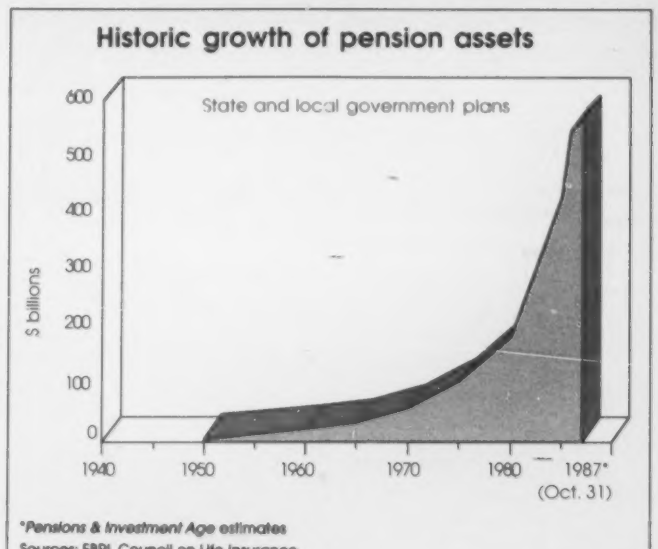
BellSouth







# IS where the action is.

It's happening now. It's happening fast. It's economic growth and business opportunities. And it's all happening in the nine Southeastern states of the BellSouth region.

In ten years, population will boom at a rate 44% faster than the rest of the nation; new jobs will be created at a rate 20% faster than the national average.

In ten years, there will be over 4 million new housing starts and about 4 million new jobs. Real personal income in the region will rise by 2.9% per year, compared to 2.7% for the nation.

The BellSouth management team is prepared to capitalize on this growth. They're committed to forward-looking business strategies and new technologies. And they're determined to stay ahead of the growing need for state-of-the-art products and services to meet customer needs in an expanding marketplace.

Selective acquisitions are a part of BellSouth's growth plans. BellSouth is already involved in new business opportunities that will lead to even greater revenues nationally and internationally.

BellSouth not only is in the midst of the action but is helping to make it happen.

The BellSouth family of companies provides telecommunications, information systems and publishing services through South Central Bell, Southern Bell, BellSouth Services and BellSouth Enterprises.

BELLSOUTH

Shaping the future of telecommunications.™

### Consultant omitted

To the Editor: I was disappointed to note The Townsend Group was not listed as a real estate consultant on your recent review of consulting services.

The Townsend Group is an institutional real estate consultant that exclusively services tax-exempt funds. We offer no other services or products. We address only the asset class of real estate and act solely in the consulting capacity.

Prior to addressing the needs of tax-exempt funds, the Townsend Group had provided real estate consulting services since 1983 to investment brokerage firms, Big Eight accounting firms, insurance companies and Fortune 500 companies. Using the experience developed addressing the needs of these knowledgeable and demanding clients, we now provide our services solely to the tax-exempt funds.

The principals of the firm, Kevin W. Lynch and myself, offer more than 25 years of "hands-on" real estate experience. We pride ourselves in the unmatched personalized service we have been able to offer our clients. We accept only a limited number of clients so we can afford each the necessary time and attention required to develop a successful real estate portfolio.

We work with our clients to develop appropriate real estate portfolios or to review their existing portfolios and suggest revisions. We then administer their plan. Encompassed in this process are a number of specific services, only some of which may apply to any one fund. The most commonly used services include: establishing objectives, policies and procedures; conducting an adviser search; preparing investment criteria; performing property specific due diligence; compiling periodic performance analysis; and implementing our proven systems, controls and programs.

We can be reached at The Townsend Group, 1419 W. Ninth St., Cleveland, Ohio 44113; (216) 781-9090.

Thank you for your kind attention to this matter.

**Terrance R. Ahern**
Principal
The Townsend Group
Cleveland

### Quantec not on list

To the Editor: The profile of Quantec/Quantitative Analysis Inc. was omitted from the Nov. 16 consultants directory. The profile is as follows:

Quantec/Quantitative Analysis Inc., 68 Laight St., New York, N.Y. 10013; (212) 925-7224.

# Shielding . . .

*Continued from page 2*

vestment returns from the cash portfolio offset the higher debt payments.

Because of advantages such as these, most corporations tend to take a conservative approach to investing their cash portfolios.

Even Ford Motor Co., Dearborn, Mich., with perhaps the largest cash position at $9.128 billion as of Sept. 30, tends to invest only in high-quality money market instruments, according to a company spokesman.

Typical of most corporate cash investment strategies is the set of guidelines used by AT&T. Mr. Reiss said the investment criteria are safety, liquidity and yield.

Some companies are becoming more aggressive in their approach to corporate cash investments.

"Given substantial investors, you can find the entire spectrum" of investment strategies, said Alan G. Seidner, president of The Alan G. Seidner Co., a consulting and investment firm in Pasadena, Calif.

On one end of the spectrum are the "simplistic" strategies, he said. "By simplistic, I mean they buy instruments that are very straightforward." These investments tend to be part of a buy-and-hold approach, he added.

"Looking at the other end of the spectrum, you have an institution that has either a large internal staff or hire outside advisers," Mr. Seidner said. These companies may use part of their cash portfolio for less traditional investments such as futures, options and equity-based programs.

Mr. Lyness said the company executives are considering inclusion of equity-based strategies, such as dividend capture programs, in the investment guidelines.

"Our cash is all in fixed income," he said. "But, we constantly are reviewing our guidelines to make sure they're appropriate because so many new products keep coming out."

Mr. Lyness also said the company uses four outside investment firms — Mercury Warburg Investment Management Ltd., Lombard Odier Investment Management Services Ltd., N.M. Rothschild Asset Management Ltd. and CSFB Investment Management Ltd., all in London — to invest about 5% of its cash portfolio.

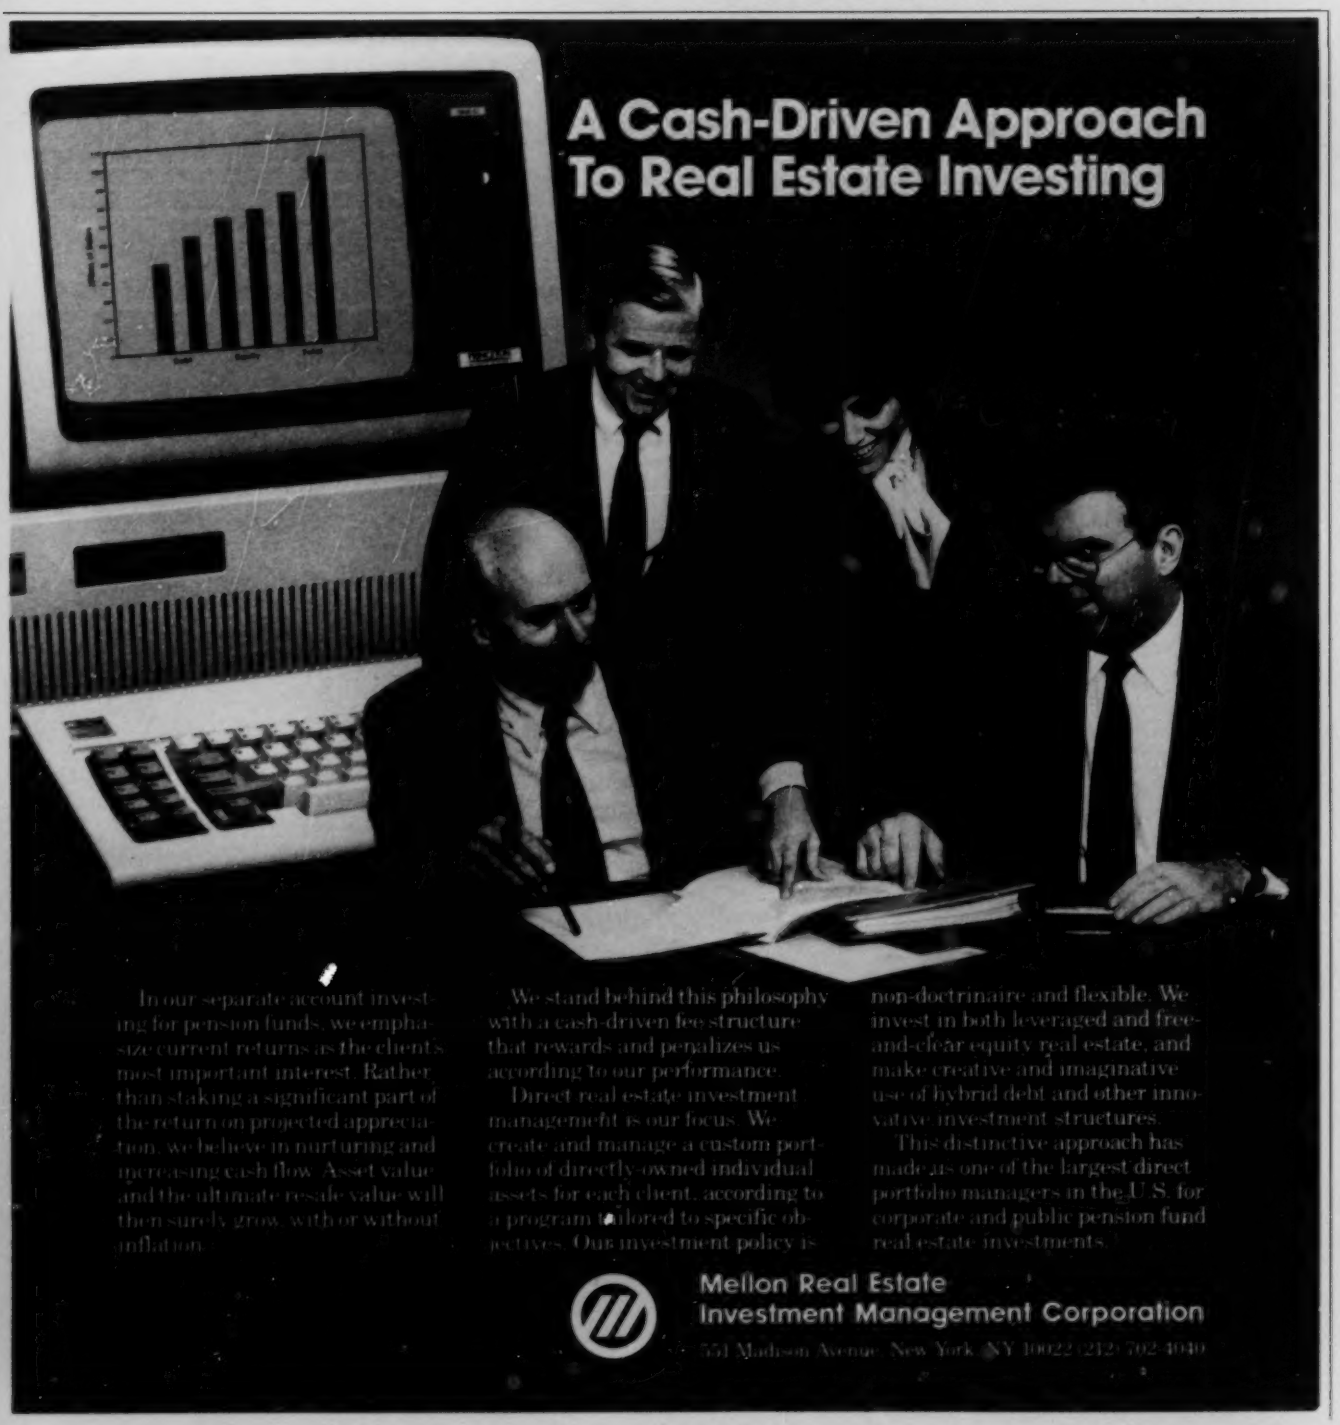
At Amoco, Mr. Murray said the company's domestic assets are invested conservatively because those funds are used for dividends, corporate taxes and other capital expenditures. The overseas assets, however, are invested more aggressively, he said.

"We have surplus funds (overseas) so we can use longer-term investments for yield enhancement. We have become active in the Eurocommercial paper market because of the yield enhancement possibilities," said Mr. Murray.

"It becomes not one monolithic cash pool, (but rather) it becomes 36 separate investment pools, both domestic and international, with different liquidity and yield requirements," he added.

Recent turbulence in the financial markets might have corporate cash investors rethinking some of their strategies.

Mr. Seidner noted many of the strategies, like index arbitrage, are based on the relationships between certain factors, such as the spread between the price of a futures contract to the underlying stock index. During the market's volatile periods, those relationships often broke down. "From my knowledge of the area I would have to say many of (these strategies) have been very disappointing and in fact costly," he said. ■



# New jobs coming in new year

Several pension industry executives will be taking leave of old jobs and facing new ones in 1988.

Leaving their positions are Robert W. Short of the New Mexico Educational Retirement Board, Santa Fe, and James A. Favia, president of Favia Hill & Associates, New York.

Taking on a new challenge is George Bruce, who has been appointed director of pension funds for the Vermont State Retirement Systems, Montpelier.

Mr. Short, investment officer of the internally managed $1.482 billion fund, will retire effective Feb. 1. No replacement has been named.

Mr. Favia is retiring from Favia Hill, the firm he helped establish as a wholly owned independent subsidiary of Chemical Bank in 1983.

He will remain with the firm until all of the accounts he manages can be transferred to a new senior equity portfolio manager, and will remain a member of the board, said Ken Dowd, managing director of Chemical Bank's Investment Group.

Mr. Dowd said Mr. Favia would help find the new portfolio manager.

Mr. Favia began his career with Chemical Bank in 1959 as an analyst and joined Kuhn Loeb in 1966, eventually becoming a partner and director of research. He rejoined Chemical in 1974 as research director.

In Montpelier, Mr. Bruce's appointment as well as that of Paul Ruse Jr., to the post of deputy state treasurer, follow the departure earlier this year of Edwin C. Gallison, the former deputy state treasurer who oversaw Vermont's pension fund investments.

The appointments were effective Dec. 1.

Mr. Bruce previously was a retiree adviser for the state; Mr. Ruse was city manager of Springfield, Vt.

Mr. Bruce will administer the $488 million Vermont State Retirement Systems, while Mr. Ruse will handle general treasury matters.

Mr. Gallison resigned earlier this year to become director of the $6 billion Arizona State Retirement System. ■

"THE ECONOMY IN THE FOURTH quarter has shown considerable momentum even after the market crash, so we enter '88 with pretty good conditions."

**Richard Rippe**

"THE DROP IN OIL PRICES HELPS keep inflation down, but it's not as important as the other aggregate factors."

**Lacy Hunt**

rise in industrial commodity prices.

"The drop in oil prices helps keep inflation down," he said, "but it's not as important as the other aggregate factors."

On the other hand, Mr. Rutledge expects only modest inflation, 2.8% in the first half and 3.5% in the second half, while Deborah Johnson and Edward Yardeni, senior economist and chief economist, respectively, of Prudential-Bache Securities Inc., New York, expect 3.5% inflation in the first half and 4.5% in the second half.

"We're in a productivity pop," said Ms. Johnson. "In times of good productivity, you rarely have to worry about inflation."

**Deficits**

Most of the economists expect improvement in the trade deficit in 1988, and some expect dramatic improvement.

While the 1987 trade deficit is expected to be about $175 billion, all but three of the economists — Messrs. Dederick and Hunt, and Robert Chandross, vice president and chief economist of Lloyds Bank in North America, New York — expect an improvement of at least $20 billion.

Several expect more significant improvements. Donald Straszeim, chief economist at Merrill Lynch Pierce Fenner & Smith Inc., New York, expects the trade deficit to decline to $124 billion, while PruBache's Ms. Johnson and Butcher & Singer's Mr. Brown expect it to drop to $100 billion.

However, the economists generally expect a slight worsening of the federal budget deficit, with all but one of the projections falling between $155 billion and $180 billion compared with about $150 billion for fiscal 1987.

"Progress in the budget deficit is vital to keep interest rates from going up, but since it's an election year you can't expect much progress there," said Frank Schott, senior vice president and chief economist at The Equitable Life Assurance Society, New York.

A number of the economists also expressed concern the Federal Reserve Board could clamp down on the money supply and induce a recession after the 1988 elections. ■

# Budget law . . .

*Continued from page 1*

will become liable to the PBGC for the full amount of unfunded, guaranteed benefits, as well as become liable for additional benefits owed to plan participants.

- Special transition rules for the steel industry and allowance for case-by-case relief from the IRS for companies with special problems will ease compliance with the tougher minimum funding rules. Under the law, the steel companies will not have to improve their funded status by more than 1% for each of the first five years.
- The annual premium paid by employers to the PBGC will convert to a variable-rate basis. The base rate will nearly double to $16 from $8.50, but now a variable component of $6 per $1,000 in underfunding will be added, up to a maximum premium of $50 per participant.

The premium increase becomes effective Jan. 1, while the funding provisions become effective Jan. 1, 1989.

The package is a compromise worked out earlier this month among the four bills passed by the tax-writing and labor committees of the House and Senate.

Administration officials praised the bill, which included much of what the PBGC and Department of Labor had wanted.

"It will significantly enhance both the retirement security of American workers and retirees and the long-term financial integrity of the PBGC," said David M. Walker, assistant secretary of labor. "While it doesn't include everything we wanted, it does include everything we need."

"We think these are fundamental reforms that will go a long way to stabilize the system," said Kathleen P. Utgoff, PBGC executive director.

Ms. Utgoff said she believes the funding rules will work well for most employers and will target the ones who need improvement the most in a moderate way. The PBGC has a nearly $4 billion deficit, much of which is because of terminations — particularly of steel company plans. It has been lobbying for higher premiums and stronger funding to protect itself from further problems.

But some business and labor experts had problems with some rules.

The loss of deductibility for contributions when a plan's funding exceeds 150% combined with harsher minimum funding rules "will drive everyone crazy," said Sol Weinberger, managing partner at William M. Mercer-Meidinger-Hansen Inc., New York.

Corporations' ability to manage budgeting and forecasting will be impaired, because contributions will become more subject to trigger points, he said.

In addition, the shorter amortization rules for past-service liabilities will cost employers more in the short term to fund benefit increases. "I think this is a serious threat to future retirees getting cost-of-living-adjustments," said Richard Raskin, consulting actuary at The Wyatt Co., New York.

Another problem is that newly required quarterly payments on plan contributions will have to be estimated for many plans. If a subsequent valuation shows the plan to exceed the 150% funding limit, the employer could lose the deductibility for the contribution and be slapped with a 10% excise tax, said Ethan Kra, a principal at Mercer-Meidinger.

Other issues resolved in the final legislation include:

- Plans that are less than 60% funded would have to post a surety bond before they can vote any increase in benefits. Under a House Ways and Means proposal that did not reach the final bill, the PBGC would have been given a security lien on any company whose plan was less than 70% funded.
- A pension-portability provision was dropped.
- Floor offset plans set up after Dec. 17 must comply with the 10% limit on employer stock in both the defined benefit and defined contribution segments of the plan.
- A set of takeover-related taxes that threatened to bring corporate mergers and takeovers to a halt were dropped except for a 50% tax on "greenmail" profits payable only if the greenmailer gets a better price from the company for his stock than the other shareholders. ■

# Thrift board picks Wells

WASHINGTON — The Federal Retirement Thrift Investment Board has hired Wells Fargo Bank San Francisco, to manage a stock index fund and a bond index fund.

The $1.4 billion fund, established in April, was created to offer federal employees a tax-deferred savings plan. It has the potential to grow explosively during the next decade.

The other investment option participants may choose is a fund investing in U.S. government securities. ■

# Bondholders slam deal

By Marcia Parker

A group of convertible securities investors is threatening to block a $152.5 million friendly takeover of Wherehouse Entertainment Inc. unless convertible investors are guaranteed of reaping the rewards of the merger, not piling up losses.

The group is led by Froley, Revy Investment Co. Inc., a Los Angeles money manager. Like other convertible investors, Froley, Revy, which owns more than $8 million of Wherehouse Entertainment's 6¼% convertible subordinated debentures due 2006, stands to lose money on the Wherehouse deal because the tendering price for the convertibles is almost half the $27.60-per-share conversion price.

The investment management firm might take legal or other action to challenge the merger, according to Thomas Revy, managing director. Executives at Wherehouse and Adler & Shaykin, the private New York investment firm that would take over Wherehouse, declined to comment other than to say through a spokesman they don't believe the convertible debenture holders have a case.

The board of directors of Wherehouse, a specialty retailer of home entertainment and information software, approved a merger agreement with Adler & Shaykin late last month. Under the agreement, WEI Holdings Inc., a company formed by Adler & Shaykin, will acquire Wherehouse for $14 per share in cash. The Adler & Shaykin tender offer expires Jan. 22, although it may be extended.

Wherehouse's board agreed to the Adler & Shaykin offer after rejecting an unwelcomed advance from Shamrock Holdings Inc., which commenced a $12-per-share offer for Wherehouse shares in November.

Until now, major investors in convertible securities — fed up with losing millions of dollars on conversion rights in some takeovers and restructurings — tried to sweet talk issuers and Wall Street underwriters into putting protective clauses in the indentures of new convertible issues guaranteeing convertible investors a fair return on their investments (*Pensions & Investment Age*, July 27).

But they've only succeeded in getting a few issuers and underwriters to include the special wording.

Now some convertible investors are getting more militant. Led by Froley, Revy, the investors are choosing specific takeover battles to air their cases and pushing for a legislative solution that would ensure the kind of rights common stockholders have long enjoyed.

"We hope to catch the attention of the Securities and Exchange Commission," Mr. Revy said of his drive to secure more equitable treatment of convertible investors. "The SEC seems

# Street financing to drop in 1988

By Marcia Parker

NEW YORK — Corporate America's coffers will be brimming over in 1988, bolstered by a $30 billion-plus increase in internal cash flow that will lessen its need to tap external financing sources, Salomon Brothers Inc. predicts.

The investment bank's annual report on the prospects for the financial markets says reduced liquidity requirements are likely to push corporate external financing needs to less than $60 billion — just below the 1987 level.

That forecast has negative implications for already struggling Wall Street firms and the corporate finance wizards who help companies raise money. Even the most venerable Wall Street investment banks have been cutting jobs to reflect the realities of the post-Black Monday market.

Meantime, the sharp erosion of pension surpluses since Black Monday also will affect corporate earnings and balance sheets, and suggests pension plans could be net sellers of stock in 1988, Salomon said.

Private funds are expected to accelerate their net liquidation of stocks to more than $30 billion in 1988 from about $19 billion in 1987.

But Salomon Brothers said that, as has been true for the past few years, the activity on the pension side of the corporation may be overwhelmed by companies' buying stock for their own account via repurchases or acquisitions. Equity retirements will far surpass new equity offerings.

Corporate external financing needs will be relatively low this year for several reasons, the investment bank said.

Gains in the export sector, along with higher rates of inflation and the ongoing benefits of cost-cutting efforts, will boost pre-tax corporate profits, Salomon Brothers said.

Nevertheless, Salomon Brothers looks for a modest pickup in net equity retirements to $60 billion in 1988 from $52 billion in 1987, which will keep debt financing comparatively high. The investment bank anticipates continued lofty levels of mergers and leveraged buy-outs, an increase in repurchase programs and a decline in new stock offerings and conversions.

As the yield curve begins to steepen in the spring, Salomon Brothers expects corporations to further shorten the maturi-

# A $10 billion makeover

## California Employees remodeling passive equities

By Chuck Paustian

SACRAMENTO, Calif. — The $44 billion California Public Employees' Retirement System is restructuring about $10 billion to $12 billion of internally managed equity assets, eliminating a $5.5 billion equity index fund and creating 13 separate portfolios.

All of the fund's in-house equity assets will be allocated among six core portfolios, six active portfolios and a South Africa portfolio. All the portfolios will be internally managed.

"It's something we've had in the planning stages for some time," said Greta E. Marshall, investment manager at the retirement system, the nation's second largest. "We delayed implementing it last year because we were converting to a master custodian and we preferred to complete that conversion first."

Wilshire Associates, Santa Monica, Calif., provided data to help with the restructuring. The fund's seven external equity managers, which manage between $4 billion and $5

## LATE NEWS

### Hitchman leaving Washington

OLYMPIA, Wash. — John A. Hitchman, executive director of the $13 billion Washington State Investment Board, will resign effective the end of March and join one of the board's equity managers, Los Angeles-based Hotchkis and Wiley.

"I certainly feel satisfied in my present employment," he said. "It's just that I think Hotchkis and Wiley is an excellent firm and there's a lot of opportunity there."

Although his title at Hotchkis and Wiley was not determined, Mr. Hitchman said he will work with the firm's partners in investing the more than $2.4 billion under management. Hotchkis and Wiley runs about $160 million for the Washington investment board.

Officials of the Washington investment board have selected a panel to find a replacement for Mr. Hitchman, but a timetable hasn't been set.

### Mitchell Hutchins buys MHIC

NEW YORK — Mitchell Hutchins Asset Management Inc., PaineWebber Inc.'s money management affiliate, has acquired Manufacturers Hanover Investment Corp., an institutional investment management subsidiary of Manufacturers Hanover Corp., for $27 million.

MHIC, which is based in New York, manages about $22 billion of institutional assets and is a leading manager of institutional money. Mitchell Hutchins, also headquartered in New York, manages about $16 billion in assets. It is strong in mutual funds and accounts for high net worth individuals.

"We don't have a large institutional business and this will give us that presence. We wanted to build a major full scale asset management firm," said Cheryl K. Gruetzmacher, managing director of institutional asset management for Mitchell Hutchins.

Manufacturers Hanover said in a statement the investment management subsidiary "had become peripheral to its strategic thrust since there was little linkage between MHIC's domestic business and other units of the parent."

### Pope quits AMR to join United

FORT WORTH, Texas — John C. Pope, senior vice president-finance and chief financial officer of AMR Corp., has resigned to become executive vice president-finance and chief financial officer at rival United Airlines, Chicago.

AMR Corp. is the parent company for American Airlines.

An AMR spokesman said most of Mr. Pope's duties will be assumed by Donald J. Carty, now senior vice president-airline planning, who will become senior vice president-finance and planning.

### Funds fighting takeover law

WASHINGTON — At least four of the nation's largest pension funds have teamed up with shareholder rights groups to sponsor a media blitz aimed at defeating the anti-takeover bill scheduled for consideration by the Delaware State Assembly this month.

Among the funds joining forces with the Washington-based groups — Institutional Shareholder Services and United Shareholders Association — are the $40 billion California Public

# Law may speed stock pull-back

By Nicky Robertshaw

WASHINGTON — Corporations, already shaken by the Oct. 19 market plunge and attempting to adjust to new pension accounting rules, have been given additional strong incentives to pull their pension assets from the stock market by the budget act passed by Congress last month.

The combined effect of new pension rules incorporated in the budget act and the pension accounting rules of the Financial Accounting Standards Board Statement 87 is likely to drive corporations to greater use of bond and hedged strategies.

Title IX of the Omnibus Budget Reconciliation Act of 1987, enacted last month, "will provide simply one more Pavlovian incentive to take a look at the asset-liability ratio," said Eric P. Lofgren, a principal in the New York office of William M. Mercer-Meidinger-Hansen Inc. "I don't think plan sponsors will throw away long-term growth, but they will try to find a compromise between long-term growth and preserving the asset-liability ratio."

"A few years ago you could keep cash flow pretty stable," said Lawrence N. Bader, a vice president at Salomon Brothers Inc., New York. But FASB 87 "changes the stability of expenses by requiring sponsors to discount the liability at market interest rates. Now, with (budget reconciliation), you upset the stability of contributions — at least with plans at the two ends (of the fundedness scale). For moderately well-funded plans, you tighten the boundaries."

"The direction Congress is going, not only with this but with the Tax Reform Act of 1986 and others, is to make more narrow the acceptable range of funding for plans," said Kenneth W. Porter, chief actuary of E.I. du Pont de Nemours & Co., Wilmington, Del. He added this could have a volatile effect on cash flow.

"It seems to me that this new law has more of an effect on funding than on cash flow," agreed Robert E. Angelica, director of pensions and investments, American Telephone & Telegraph Co., New York, who noted he had not yet studied it.

He added the law could cut down on management's ability to build up a cushion against adverse market experience and other future developments "by cutting tighter corners."

Because the new law sets 30-year Treasury bond interest rates as the "moving target" that will cause fluctuation in the asset-liability ratio, pension funds eventually will move more toward fixed-income investments.

Sponsors of underfunded plans particularly are affected because financially troubled companies might not be able to afford the stiffer monetary requirements that would accompany dips in their funding status. Such funds eventually would have to stay away from the more volatile equity markets, Mr. Lofgren said.

Among investment instruments thought to become more popular in light of the recent developments:

- Dollar-duration immunized portfolios, such as that implemented by American Airlines (*Pensions & Investment Age*, March 9). Under this arrangement, a company can cover its pension liabilities by investing less than half of its assets in a bond portfolio of longer duration than the liabilities.
- Hedges against large stock market losses — both existing methods such as portfolio insurance and new devices that might be developed. Mr. Lofgren, who describes himself as a longtime foe of portfolio insurance, sees it as favorable if used wisely. He believes the market crash has thinned the number of users —

*Continued on page 34*

# Asset mix is key issue

By Chuck Paustian

Pension fund executives are paying more attention to asset allocation than any other topic, trying to deal with the increased volatility of the financial markets.

An informal survey of investment consulting firms found asset allocation to be the most frequent topic of discussion with their clients.

"The October decline and the November decline have reinforced the importance of having the (asset allocation) structure right," said William F. Brock, director of consulting at Evaluation Associates Inc., Norwalk, Conn.

The Financial Accounting Standards Board Statement 87 and various investment strategies geared toward its implementation also are hot topics, the consultants said.

Sandy Lincoln, managing director of asset planning services for William M. Mercer-Meidinger-Hansen Inc., Deerfield, Ill., noted two reasons for the current emphasis on asset allocation.

"First and probably foremost is the volatility of the markets," Mr. Lincoln said. "People are seeing a tremendous amount of volatility in the stock and bond market both, and people are asking, 'What can we do to protect ourselves?' "

He also said FASB 87, which will require corporations to note the funded status of their pension funds on the balance sheet, has corporate pension executives looking at asset allocation to protect or improve the relationship between assets and liabilities.

"It has focused the plan sponsors on the level where they can make the biggest impact, which is asset allocation," he said.

The goal of the allocation studies, the consultants said, has been to examine how well the asset mix served the pension fund, rather than to analyze the performance of particular asset classes.

"We're really focusing more on this question of the risk of the underlying asset classes and how this will impact asset allocation in the future," said Lawrence E. Davanzo, senior president of Wilshire Associates, Santa Monica, Calif.

"It's more evolutionary in regard to structure as opposed to reactionary as in looking for a quick fix and preparing for the next crisis," said Mr. Brock.

Corporate executives also face the dilemma of trying to maximize investment returns while mitigating fluctuations in pension expense resulting from adjusting the market values of a pension plan's assets and liabilities.

"If anything, the emerging solutions (to this problem) seem to favor bonds," said Ronald J. Surz, a principal of Becker, Burke Associates Inc., Chicago. The idea, he said, is the value of the fixed-income assets will increase or decrease in concert with the plan's liabilities as interest rates change.

Mr. Surz added, however, "Bonds have been getting

*Continued on page 34*

# Highs, lows of market is top story

The boom-and-bust stock market of 1987 was the most significant finance story of the year, according to *Pensions & Investment Age* readers.

Predictably, the gyrating market was ranked among the top five stories by almost 78% of the voters.

Readers were asked in the Nov. 30 issue to rank — from 18 choices — the five most important financial news stories of the year. The responses were tabulated by awarding five points to the top-ranked story, four points to the second-ranked one and so forth.

The stock market —which last year marked the fifth anniversary of a bull run, a record high and a record one-day drop — easily swept the vote.

Japanese investment was deemed the second most important story of the year, being named by almost 52% of the respondents.

Last year, Japanese investors poured billions of dollars into the U.S. stock and equity real estate markets, while for the first time, U.S. investment institutions tapped into $16 billion in Japanese assets, through individual efforts and joint ventures with Japanese firms.

The Financial Accounting Standards Board's Statement 87 and corporate strategy "integration" brought increased scrutiny to pension fund assets and liabilities, making the asset/liability issue the third most important story to *P&I Age*'s readers, showing up on 37% of their ballots. (FASB 87 requires pension liabilities to be shown on a corporation's balance sheet.)

Although the growth of the nation's pension surplus did not make it into the the top five stories, the dispute over who is entitled to those surplus assets did, ranking fourth in points

*Continued on page 33*

# Modest growth for indexing

By Trudy Ring

Indexing continued to grow, albeit at a modest rate, in the six months ended Nov. 30.

Domestic stock index funds run by 29 major managers had a net gain in assets under management of 5.5% in the period, while domestic bond index funds had a net gain of 1.9%. International stock index funds had a net gain of 4.2%.

The figures are based on the indexed assets of management firms that provided *Pensions & Investment Age* with information for both May 30 and Nov. 30 and reflect adjustment for market gain or loss.

"Net/net, we've seen much more inflow than we have outflow in our index funds," said Carol Zipkin, senior vice president of Alliance Capital Management Corp., New York.

"We've seen more contributions come into our index funds than go out, but nothing dramatic," said Steve Krisik, vice president of Northern Trust Co., Chicago.

Indexers hope to benefit further after plan sponsor committees review their asset allocations and managers' results in the wake of the October stock market decline.

Preliminary statistics from at least one consultant might boost those hopes.

According to unpublished data compiled for clients by Wilshire Associates, Santa Monica, Calif., active equity managers underperformed the stock market during the month of October and the 10 months ended Oct. 31, and value managers failed to add much value in the down market. If fourth-quarter 1987 returns — which for the most part won't be available until the end of this month — reinforce those findings, more sponsors might opt for indexed funds.

"What happens is people typically have a flurry of activity — making reports, meeting with committees," said Bill Fouse, chairman of Mellon Capital Management Corp., San Francisco. That process takes a few months, he said. "But the repercussions will start to be seen as early as March."

Included among the 29 managers providing information for both Nov. 30 and May 30 was $98.3 billion in domestic stock index funds, $40.7 billion in domestic bond index funds and $5.7 billion in international stock index funds as of Nov. 30.

As of May 30, those managers had $115.6 billion in stock index funds, $38.9 billion in bond index funds and $6.2 billion in international index funds. Those numbers were then adjusted by major market indexes for comparison with the Nov. 30 figures.

During the six months, the Standard & Poor's 500 stock index declined 19.4%, the Shearson Lehman Government/Corporate bond index gained 2.6% and the Morgan Stanley Capital International Europe, Australia, Far East index declined 11.7%.

Overall, as of Nov. 30, 37 managers interviewed by *Pensions & Investment Age* had $161.3 billion worth of index funds under management. That included $107.4 billion in domestic equities, $43.7 billion in domestic bonds and $5.8 billion in international, almost exclusively equities. The total includes some indexed strategies that are not pure equity or fixed income, such as tactical asset allocation.

Six months earlier, 42 managers surveyed by *P&I Age* had $190 billion in index funds, including $126.3 billion in domestic equities, $43.5 billion in domestic bonds and $6.6 billion in international.

In addition to the index funds run by money managers, there were $65.7 billion worth of index funds run in-house by the nation's top 200 pension funds as of Sept. 30. This is composed of $63.4 billion in stock index funds and $2.3 billion in bond index funds. Nov. 30 figures were not available but, using market performance, *P&I Age* estimates the stock funds would have stood at $52.9 billion and bond funds would have been $2.35 billion. In the two months, the S&P 500 was down 28% and the Shearson Lehman index was up 4.4%.

Indexing has surged in the past few years because of the tendency of active managers to underperform broad market indexes and because of its lower management fees. But some say it's too soon to tell whether the October market plunge will produce another surge.

"Between the 19th (of October) and the end of the year, you're finding pension sponsors re-evaluating what types of strategies they want to be involved with," said Scott Malpass, index fund manager at Irving Trust Co., New York. Many pension executives believe active management does better in down markets and indexing in up ones, but they may not be ready to predict which way the stock market will go, he said.

If pension executives are disappointed by their active managers' year-end results, it's highly likely there will be increased interest in indexing, said Jim Carder, presi-

**Michael Petrino of Matrix Capital, left, says the January effect cannot occur without other economic fundamentals, but William Fouse of Mellon Capital feels reasonably sure the phenomenon will occur.**

# *Timers returning to equity market*

By Marlene Givant

Managers implementing market-timing strategies generally have increased their equity exposure since October, but few have done so to benefit from the so-called January effect.

Although managers believe the phenomenon — in which small-capitalization stocks outperform others early in the year — will be borne out, most didn't want to chase the quick uptrend.

"The January effect doesn't show enough times to bet on it in and of itself. You need economic fundamentals to support a rally as well. There has been no January effect in three of the last seven years," said Michael Petrino, president of Matrix Capital Management, Greenwich, Conn.

As for broader strategies, managers interviewed were fairly bullish on stocks. Port-

# Unisys plan unveiled

## Merged fund may up alternative investments

By Jacqueline Dutton

BLUE BELL, Pa. — The new Unisys Corp. pension plan, constructed with more flexibility than its predecessors, likely will increase its investments in international, venture capital and real estate.

Unisys' approximately $2.6 billion in employee benefit funds officially will replace those of the former Burroughs Corp. and Sperry Corp. April 1. Unisys is the company formed from the acquisition of Sperry by Burroughs in 1986.

The defined benefit plans' investment policy evolved from the implementation of core decisions: to give the new plan the best features of the old ones; to terminate underperforming or unnecessary managers; and to make the new plan adaptable to strategic changes.

That was the solution arrived at by David White, former Burroughs pension executive and now Unisys vice president of capital management, and his Unisys colleagues, who had the awesome task of consolidating assets of two very differently managed plans into one.

"The program doesn't look like either the Burroughs or the Sperry plan," Mr. White said.

Instead, it has a combination of features, although it more closely resembles the old Burroughs plan in terms of asset allocation and managers. (More than $1 billion of the Sperry plan was in an internally managed balanced account with the now-defunct Sperry Capital Management Co.)

The Unisys plan won't use any balanced managers, but it will, like the Sperry plan, be exposed to international equity and guaranteed investment contracts, and to real estate and venture capital, distinct features of the Burroughs plan.

In fact, international equity likely will compose a greater percentage of total equities in the future. Now, the fund invests roughly $173 million in foreign stocks, an amount carried over from the Sperry plan.

"On our table for '88 is a review of the international sector and its managers," Mr. White said. "We have no cause for concern because they are doing really well," he said.

New strategies, such as currency allocation, also will be considered.

The same consideration will be given for real estate, which was part of the Burroughs plan but not the Sperry plan. Although the current exposure is only 4% of total assets, Mr. White said the target is 15%.

The fund also has displayed a growing interest in the venture capital area; during the fall it hired leveraged buy-out specialist Blackstone Group, a New York Merchant Bank, to invest a $25 million commitment and signing Ventures Trident to invest another $10 million in other ventures, moves which more than doubled total venture capital exposure.

Abbott Capital Management, Wellesley Hills, Mass., which had been a Burroughs' manager, invests $40 million for Unisys in 11 venture capital partnerships. Mr. White said more assets could be moved into venture capital to move total portfolio weighting from the current 2% to the targeted 5%.

Early last summer, Unisys completed its reallocation of the funds managed by Sperry Capital to several managers. Equity manag-

FINANCING

# Underwriting volume dips

By Brad Rudin

NEW YORK — While underwriting volume in 1987 dropped below the bullish levels established in 1986, Salomon Brothers Inc. maintained its lead as the top underwriter in the public domestic market and First Boston/Credit Suisse First Boston continued as No. 1 in the public global market.

Volume figures for most sectors declined, the victim of uncertainty created by the Oct. 19 stock market fall.

In the global market, volume shrank 12% to $432.7 billion from $491.6 billion in 1986, according to Securities Data Co., New York. Domestic volume slid 5.1% to $271.5 billion in 1987 from $286 billion the year before, according to IDD Information Services Inc., New York. The decline is bigger if mortgage-related and agency issues are removed from the domestic total. Calculated this way, the volume of corporate finance underwritings dropped 11.4% to $144.8 billion from $163.4 billion in 1986.

Mortgage-related securities moved against the tide with a 40% increase in underwriting volume.

The mortgage-related market has been helped by investors' "flight to quality" and Wall Street's efforts to educate buyers about the securities, said Chuck Ramsey, a managing director in the mortgage-related unit at Bear, Stearns & Co.

Potential for continued growth exists, Mr. Ramsey said. "If you're talking about what hasn't been securitized, you're talking about trillions out there. It's a marketplace that's immense, gigantic."

The outlook for total volume remains clouded by slow economic growth, a steep yield curve, the quiet Euromarket and the completion of some major financings, said C. William Schroth, a managing director at First Boston. "I think the market as a whole is going to have a tough time equaling 1987 volume in 1988."

That's not good news for Wall Street firms struggling with costs that became part of the budget when the volume of business seemed permanently fixed in a northerly direction.

The volume of common stock financings sank 4.7% to $41 billion from $43 billion in 1986 while the value of high-yield debt offerings fell 10.8% to $28.9 billion in 1987 from $32.4 billion the previous year.

The volume of asset-backed securities increased 3% to $10.3 billion in 1987 from $10 billion the previous year.

For the first time in several years, investment bankers competed in a shrinking market.

"It's been a highly competitive year," said Jason M. Elsas Jr., head of the syndicate department at Salomon. He said ranking No. 1 in domestic underwritings, an honor Salomon has held for five years, has one caveat: "It's a top priority as long as the business is conducted with an eye toward profitability."

Its role as lead manager for such big equity offerings as E-II Holdings Inc. and Carnival Cruise Lines Inc., and bigger debt offerings for the Federal National Mortgage Association and several trusts made Salomon the top-ranked underwriter in the domestic market.

First Boston, with its London-based affiliate, Credit Suisse First Boston, kept its hold on first in worldwide underwritings for the third year running because of the firm's thorough coverage of its clients and involvement in the major sectors of the capital markets, said First Boston's Mr. Schroth.

First Boston made it to the top in worldwide volume with a big debt offering for Allied Stores Corp. and issues backed by mortgages and other assets.

Although Salomon is a powerhouse in the investment-grade debt and mortgage-related debt businesses, the firm ranks below First Boston in the common stock, preferred stock, high-yield debt and asset-backed segments of the market.

The gap between First Boston and Salomon Brothers narrowed in the domestic and global rankings. Salomon held a 14% domestic market share in 1987 compared with the 13.5% share held by First Boston, but in 1986, Salomon took 17.9% of the business vs. First Boston's 15.4%, according to IDD.

Source: IDD Information Services, New York

In the global ranking, prepared by Securities Data, First Boston/Credit Suisse First Boston held a 10.7% market share in 1987 compared with the 10.3% share held by Salomon. In 1986, First Boston/CSFB did 13.2% of the business vs. Salomon's 12%.

Wall Street's top five firms held a combined domestic market share of 63% in 1987 compared with 65% in 1986. Worldwide, the top five held 46% of the market share compared to 48% the previous year.

Overall, the lineup of managers in the top spots changed considerably between 1986 and 1987. In the domestic market, Morgan Stanley & Co. Inc. dropped to fifth place after placing third in 1986, and Drexel Burnham Lambert Inc. fell to sixth place from fourth a year earlier.

Merrill Lynch muscled its way to third after finishing fifth in 1986, and Goldman, Sachs & Co. boosted its standing by moving to fourth place from sixth.

In the global ranking, third-ranked Goldman, Sachs switched places with Morgan Stanley, which finished 1987 in fifth place.

The year's most notable come-from-behind story is probably the performance of Smith Barney, Harris Upham & Co. in the convertible debt market. Smith Barney, which ranked 12th in that market in 1986, displaced Drexel Burnham Lambert Inc. for the top spot last year.

"We recognized the potential demand for new convertible offerings," said A. Richard Janiak, managing director at Smith Barney. "We informed our clients of that early."

Smith Barney managed big convertible debt offerings for Prime Computer Inc., Browning-Ferris Industries Inc., The Mead Corp. and other issuers.

Morgan Stanley came from near the cellar in the convertible preferred stock sector, moving to the top spot from 13th in 1986. Drexel was the first-ranked underwriter in this sector in 1986.

The leaders in various domestic market segments generally held their top-ranked positions, but the gap between No. 1 and the runner-up typically diminished.

For example, First Boston saw its 90% share of the asset-backed security market drop to 50% in 1987. IDD includes debt and equity issues backed by non-mortgage commercial receivables.

First Boston's decline in market share was not unexpected, Mr. Schroth said, noting Wall Street firms typically adapt ideas developed by others. "New products in investment banking have a very short half-life. If you can figure out a way we can copyright new ideas, that would change the business dramatically."

Similarly, Drexel saw its share of the public high-yield debt market shrink to 40% after holding 45% in 1986. "Market share is not as important as other things," said a Drexel spokesman, adding the firm's private placement of high-yield offerings boosts its share of the total high-yield market.

Morgan Stanley chopped away at Drexel's lead in 1987 with big high-yield financings for Owens-Illinois Inc., Burlington Holdings Inc. and other issuers. Morgan has boosted its professional high-yield staff by between 30% and 40% since 1986, said Neal S. Garonzik, a managing director in the merchant banking department. ■

# Indexing

*Continued from page 3*

dent of Westridge Capital Management, Los Angeles.

On Oct. 19 and the next few days, some users of The Vanguard Group's actively managed stock mutual funds expressed interest in moving to the index funds, as some of the active funds had higher volatility than the market, said Brian Mattes, vice president of Vanguard, Valley Forge, Pa.

Stock index arbitrage — moving between stock index funds and futures to take advantage of mispricings — has been accused of causing or exaggerating the stock market's decline. With that has come the threat of new regulation of such trades, but several stock index fund managers continue to use arbitrage.

Any new regulations would affect everyone, Mr. Fouse noted. "Worry (about new regulations) is non-productive," he said.

"Regulations may not be as pointed as it seemed they would be in the third week in October," Mr. Krisik added.

A few have pulled back from arbitrage. "Clients perceive that as being very risky," Mr. Malpass said, so Irving Trust hasn't used the strategy much since October.

Vanguard, like some other managers, has never used arbitrage in its index funds. "The use of futures and options for other than hedging purposes actually puts on more risk than the market itself has," Mr. Mattes said.

Those that are using arbitrage report it still offers plenty of opportunities to add return. "We've had no shortage," Mr. Carder said.

The use of futures and options to enhance bond index funds is becoming more widespread. Security Capital Management Inc., Stamford, Conn., maintains a heavy position in interest rate futures, said Bob Brewer, chief investment officer.

Overall, bond indexing is gaining increased acceptance, managers said. "We have seen an increase in interest in structured fixed-income management, to include indexing," said Ken Meyer, executive vice president of Lincoln Capital Management, Chicago.

Bond index funds may benefit especially if pension funds increase bond allocations in response to Black Monday, said Ed Swan, manager of the asset management group at WR Lazard & Co., New York.

Index fund managers track a wide variety of benchmarks; among stock index funds, the S&P 500 remains the index of choice, but new and customized indexes are picking up ground.

Not all managers provided data on how much of their assets tracked a given index. Among stock index fund managers that did — accounting for $70.4 billion, $45.1 billion, or 64.1%, tracked the S&P 500 or a subset of it as of Nov. 30.

The Wilshire 5000 accounted for $3.8 billion, or 5.4% of the assets, and various other indexes accounted for $21.4 billion, or 30.5%. Most of the $21.4 billion tracks indexes customized for clients, but a modest portion is tied to the Russell 1000, 2,000 or 3,000 indexes.

Among the $36 billion in bond index funds for which this information was available, $19.9 billion, or 55.3%, tracked custom indexes. A total of $12.5 billion, or 34.7%, tracked the Shearson Lehman index or a subset of it and $3.6 billion, or 10%, tracked the Salomon Brothers Broad Investment Grade bond index or a subset of it.

Among the $5.5 billion in international funds for which the information was available, $3.8 billion, or 69%, tracked the Morgan Stanley Capital International EAFE or World indexes, while the remainder tracked various new or customized indexes. ■

# Active managers don't beat market

**By Jacqueline Dutton**

SANTA MONICA, Calif. — Active equity managers underperformed the stock market in October and the 10 months ended Oct. 31, and value managers failed to add much value in the down market, according to unpublished data compiled by Wilshire Associates for its clients.

Marcia Ryles, senior associate at Wilshire, said the performance of 113 active managers — those who sell themselves on their ability to outperform the market on a risk-adjusted basis — was worse overall than the Standard & Poor's 500 stock index for the one- and 10-month periods.

"There was a wide range of returns, but it shows most managers did not add value to the index," she said.

In addition, Ms. Ryles said value managers — who typically are the better performers in down markets — added little value over the S&P 500 for the month of October.

"They offered very little protection," she said. Because they failed to add real value to portfolios, she suggested the "value" managers might be more appropriately described as "conservative" managers.

Ms. Ryles said the performance figures have raised the eyebrows of Wilshire clients, but have not resulted in any terminations. She said instead of pointing the finger at individual managers, pension fund executives are stepping back and reassessing their asset allocations, which likely will result in a transfer of assets into indexed accounts.

"Our clients right now are mostly taking a wait-and-see approach," she said, but that could change as a result of year-end evaluations, she added.

She said clients also are interested in looking more at asset structure than manager selection because those who were well diversified heading into the October crash were glad of it.

"Most of our clients are taking a look at asset allocation because this showed it (diversification) really worked," Ms. Ryles said.

The median performance among active managers profiled by Wilshire was −22.4% during October, while the S&P index returned −21.6%. Managers in the fifth percentile returned at least −15.2% and those in the top 25% returned at least −19.5%. Managers in the 75th percentile range returned −25.3% at the minimum, and those in the 95th percentile bettered −29.6%.

Active managers fared even more miserably during the 10 months. Ms. Ryles said the median manager in the Wilshire universe returned only 1.6%, while the S&P 500 returned 6.6%, a figure that would have placed the index at the 20th percentile in the universe. The top quartile of managers returned at least 5.7% and the top 5% of managers returned a minimum 11.6%. Those in the 75th percentile returned at least −2.5% and those in the 95th percentile returned a minimum −8.5%.

When the performance of the 20 managers in the universe that use value-oriented styles were broken out, the results were even more surprising, she said.

The median manager, Ms. Ryles said, barely outperformed the market during October, with a −20.8% return, adding less than one percentage point of value. In contrast, Ms. Ryles said, value managers added up to five percentage points of value during the down market in 1981.

"It seems they added more value in that previous down period, but perhaps it was a different market," she said. "(And) no one added value in this market."

The best-performing value managers, she said, probably held a lot of cash. The top fifth percentile returned at least −16.1% in October and the top quartile, −18.9%. The third quartile returned at least −22.6% and the 95th percentile returned at least −25.4%.

For the 10-month period, value managers also failed to beat the market; the median managers returned 2.9%.

# 401(k) view changing

WASHINGTON — Bruised by tax reform and battered by the stock market crash, investors who used 401(k) plans to pick up short-term gains in stocks might change their ways, according to the the Employee Benefit Research Institute.

According to the non-profit public policy research organization, tax reform left 401(k)s more attractive as long-term retirement plans, particularly as an alternative to individual retirement accounts.

Tax changes put a $7,000 limit on tax-exempt contributions to 401(k) plans and placed restrictions on early withdrawals, EBRI stated.

The market crash showed those who chose to invest contributions only in stocks the risks behind putting all the nest eggs in one basket.

EBRI predicted there will be more diversification into other investment options, such as bond funds, as a result of the crash.

The value of defined contribution plans — typically tax-sheltered savings plans in which employees contribute part of their pay — dropped $54 billion, or 12%, from the market's peak Aug. 25 to Oct. 30.

But these changes will affect a minority of 401(k) plan investors, typically those at the high end of the pay scale.

Still, EBRI suggests employers should make an effort to help employees understand the risks and the rules associated with plan participation. ■

# Financing

*Continued from page 1*
ties of their bond offerings and increase their dependence on bank borrowing. The flight to quality precipitated by the recent collapse in stock prices will keep issuance of high-yield debt in 1988 below the near $3 billion average monthly clip of 1987. In response to a declining dollar, and the attendant lack of interest by investors abroad, U.S. corporations will curtail their bond offerings in the Eurodollar market.

The projected steady level of net bond financing in 1988 masks continued declines in gross offerings and call activity, the investment bank said. Gross issuance will come to $126 billion, $5 billion less than this year and $20 billion below 1986's level. Calls, which totaled nearly $40 billion in 1986 and about $32 billion in 1987, will amount to just $27 billion next year.

Both trends, Salomon Brothers said, reflect a significant drop-off in utility refinancings.

Meantime, equity retirements will overwhelm new issuance for the fifth consecutive year. The volume of new cash offerings will fall by about $10 billion, or 15%, and retirements via buybacks will increase modestly, the investment bank predicts.

On the pension side, the investment bank said that during October, the average funding ratio for corporate pension sponsors slipped to 160% from about 200%. Any favorable earnings impact that had been anticipated in the form of reduced pension expenses has been muted.

Nonetheless, the surplus still stands somewhat above year-end 1986 levels.

The impact of the decline in the pension surplus on balance sheets might be more significant. Under the Financial Accounting Standards Board Statement 87, if pension assets fall below liabilities, the shortfall must be carried on the balance sheet as a net unfunded liability. In September, only 2% to 3% of all pension sponsors had a net unfunded pension liability. After Oct. 19, 5% to 10% of all pension sponsors fell into that category.

Salomon Brothers said it is reasonable to assume pension sponsors that have a small surplus, with assets only slightly in excess of liabilities, will be loath to report a new liability on the balance sheets. These pension sponsors will have a powerful incentive to avoid equity market risk and could well be active sellers of stocks in 1988.

Salomon expects both public and private pension funds to shift from equity investment toward debt instruments of appropriate duration.

Private funds are expected to accelerate their net liquidation of stocks to more than $30 billion in 1988 from about $19 billion in 1987.

More specifically, Salomon said that for the first time in the post-World War II period, financial institutions will be net sellers of corporate stocks — liquidating more than $10 billion in 1988. In 1986 they acquired nearly $50 billion, and in 1987, Salomon estimates they took down more than $10 billion.

The selloff is concentrated in private pension funds, which continue their shift out of equities into long-duration debt. Even after the market collapse, pension funds have nearly $525 billion, or 55% of their total assets, in stocks. Other institutions will either be net sellers or will curtail their net equity purchases substantially in the wake of 1987's extreme market volatility, the Salomon report said.

Turning to another financing trend, Salomon Brothers said it expects the booming market for mortgage-backed securities to slow amid weak residential housing starts and new residential mortgages and excess capacity in commercial mortgages.

Net additions to the supply of securitized mortgages will remain at the slow pace of the last few months of 1987. This will translate into an annual volume of $122 million, $20 billion below 1987's level. ■

# Foreigners jump in

## Overseas cash pumped up soaring market

**By Joel Chernoff**

NEW YORK — Foreign investment in U.S. equities buoyed the stock market through the first three quarters of 1987, a Salomon Brothers Inc. study shows.

The study found 76.7% of the Dow Jones industrial average's 800-point gain in the nine-month period occurred during the first half-hour of each trading day, when overseas buyers are most active. "Similarly, 83.5% of the total net inflow of $23.3 billion occurred in the same 30-minute span" of the trading day, said Salomon's market review and outlook for global equities.

But when the surge of foreign buying will return (after being stopped short by the Oct. 19 stock market crash) remains uncertain, as central banks attempt to stabilize the falling dollar. Until that time, "a (foreign) customer would be somewhere between heroic and stupid" to invest in the U.S. market, said Robert Brusca, senior vice president and chief economist for Nikko Securities Co. International, New York.

"I think you'd need a long period of stability to get foreigners interested in size," said George Murnaghan, vice president at Rowe-Price Fleming International Inc., Baltimore.

Without a stabilized dollar, pressure to push up the stock market will have to come from U.S. investors, he said. But a dried-up flow of foreign dollars has negative implications for the bond market, which may see higher yields to attract investment. That, in turn, is bad news for the stock market, Mr. Murnaghan said.

Some investment professionals already see signs that foreign investors are renewing their plans to plunge into U.S. stocks.

The Japanese tend to stick with their long-term objectives and now, with stocks at cheaper prices and the dollar devalued, "it's like Filene's basement — name-brand products for 20% off," said William Jacques, partner at Martingale Asset Management, Boston.

Last week, with the dollar showing signs of recovering from post-World War II lows against the Japanese yen, Japanese investors started to edge back into the U.S. stock market, said Motoi Okada, executive vice president, Daiwa Securities America Inc., New York.

But Japanese investors are ready to flee if the market declines, Mr. Okada added.

Market observers have suggested foreign investors have boosted stock prices during the past couple of years. In particular, prices of stocks in the Standard & Poor's 500 index have increased far more than stocks of similar capitalization, reflecting foreign desires to purchase household names as well as the effect of growing assets placed in index funds and use of derivative instruments (*Pensions & Investment Age*, Sept. 7).

The Salomon Brothers study provides some hard evidence to back the contentions: Foreign investors accounted for 27.7% of net equity purchases in the first half of 1987, 31.2% in 1986 and 11.8% in 1985.

Only state and local pension funds and mutual funds have played as large a role in making net equity purchases during that time, while net purchases by private pension funds have been flat since 1983 (*see chart*).

In fact, private funds experienced net withdrawals in 1987, according to the Employee Benefit Research Institute, Washington. Private pension funds had net withdrawals of $13.1 billion from stocks in the third quarter, a sharp increase from the second quarter's $4.8 billion withdrawal, and close to the $15.7 billion in withdrawals in the first quarter of 1987.

In addition, Salomon expects households to be net sellers to mutual funds, public funds and foreign investors.

The Salomon study also found:

- Euroequity issues soared to $21 billion in 1987, up from $600 million in 1983. U.S. corporations relied more on global issues, with Eurotranches accounting for 8.7% of total issuance, up from 5.2% in 1986.
- Mergers and acquisitions have become increasingly global. Nearly one-third of the $281.4 billion in mergers and acquisitions worldwide were transnational, including such major deals as British Petroleum's $7.4 billion acquisition of Standard Oil Co., Cleveland, and Chicago-based Amoco Corp.'s $4.1 billion purchase of Dome Petroleum Ltd., Calgary, Alberta.
- Corporate reorganizations continued strong in 1987, with total completed and pending efforts reaching $231 billion, down from $275 billion in 1986. Of that total, corporate buyback programs surged to $70.8 billion from $44.8 billion the year before; one-third of the announced share buybacks occurred in the second half of October.
- The 10 S&P 500 stocks whose market capitalizations appreciated the most accounted for 37% of the index's gains, led by **Merck & Co. Inc.**, **Dow Chemical Co.** and **Ford Motor Co**.
- The 10 stocks whose prices showed the largest gains however, added just 6.5% of the gain to a market-weighted portfolio. The biggest gainers were **Reynolds Metals Co.**, 107.5%; **Bethlehem Steel Corp.**, 106%; **Phelps Dodge Corp.**, 92.7%; and **First Mississippi Corp.**, 92%.
- 1988 will be a difficult year for the stock market. The presidential elections, the possibility of a recession, changes in the securities industry — including a decline in research and an unclear future for derivative instruments — and memories of the October crash make predictions uncertain. Nevertheless, Salomon suggests that aerospace, oils, insurance and banking-industry stocks could do well.
- Worldwide markets will perform well, influenced by positive growth rates, stable governments, growth of derivative securities trading and other factors, such as liberalized capital markets, growth in international funds, adequate global liquidity, continued privatizations of government-owned companies, and increased debt-for-equity swaps in developing markets. ■

# Fund makeover

*Continued from page 1*
billion, were not affected.

The six passively managed core portfolios, which initially will hold between $6.4 billion and $8 billion, represent growth- and value-oriented accounts in each of three capitalization groups — large, intermediate and small — and will hold about 1,000 different stocks.

The original parameters for the capitalization groups were $1 billion or more in market capitalization for the large group, $500 million to $1 billion capitalization for the intermediate group and $500 million or less for the small group.

"We float (the parameters) with changes in the market so that we get a uniform group of companies" in each of the categories, Ms. Marshall said.

Computer models then are used to screen out stocks from these broad groups for the active portfolios, to which between $1.6 billion and $2 billion will be allocated initially.

"Depending on the results we get, we'll either increase or decrease the allocations to the active portfolios," she said.

The active portfolios were created because "we wanted to see if we could add value" through active management, she said. The performance of the active portfolios, as well as that of the external managers, will be compared to the results of the core portfolios.

"We'll be comparing to the normal indexes also, but I felt we'd have more meaningful information if we had these very specifically designed subsets.

"We thought we could make better decisions regarding the capabilities of our managers if we had better portfolios to compare them against," Ms. Marshall said. Results of the outside actively managed portfolios also will be compared to the results of the in-house active portfolios.

"The capitalization sizes are important because there has been reason to believe in the past that small-cap stocks outperform (large-cap stocks) over a long period of time."

In addition, "we wanted to find out if there is more value from active management in the (large-capitalization) sector or the small sector," she said.

Ms. Marshall said the retirement system has about $2 billion invested in about 100 different stocks of companies doing business in South Africa. Those holdings are being placed in a separate portfolio because California law requires the system to sell all such holdings during the next three years. ■

# Market swings

*Continued from page 2*
but showing up on 44% of the ballots.

Last year, two federal appeals courts issued rulings on the question of surplus asset ownership, yet the decisions did little to resolve the dispute.

In a case heard by the 11th U.S. Circuit Court of Appeals, Blessitt vs. Dixie Engine Co., the employer was ordered to pay out unaccrued, forfeitable benefits as well as all accrued benefits before taking any of the surplus assets. In the other case, Tilley vs. The Mead Corp., heard in the 4th U.S. Circuit Court of Appeals, the employer was ordered to pay out early retirement benefits to compensate employees who had not reached the designated retirement age.

For the second year in a row, portfolio insurance made enough headlines to rank among the five most important stories, squeaking into the top five with only 29 points but appearing on more than 40% of the questionnaires.

The strategy was in the news throughout the year, but never more so than following the Oct. 19 market crash. Already being questioned for its higher-than-expected costs, the program was in the spotlight after the crash as pension and other investment industry executives tried to decide whether the strategy was a success and what — if any — role it played in pushing the falling market down even further. ■

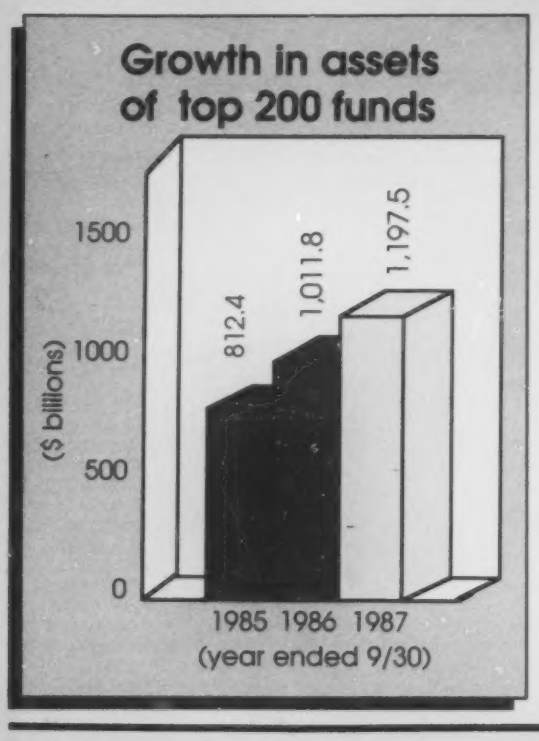
# A $1 trillion milestone

## Top 100 soared with bull market



By Chuck Paustian

Assets of the nation's 100 largest employee benefit funds broke the $1 trillion mark for the first time — climbing 18.5% to $1.002 trillion as of Sept. 30, *Pensions & Investment Age*'s annual pension fund survey shows.

Strong performance of equity investments fueled the increase in assets of the Top 100 funds, as benefit payments continued to outpace employer contributions.

- **The Top 1,000 funds increased 17.8% to $1.578 trillion.**
- **The Top 200 funds increased 18.4% to $1.198 trillion.**

On average, those funds had 48.1% of their assets invested in the equity market, which rose 43.5% during the year ended Sept. 30.

Bond investments, to which the Top 100 funds had allocated an average of 31.9% of their total assets, dampened the growth. The Shearson Lehman Government/Corporate bond index, declined 0.4% during the 12 months ended Sept. 30.

The stellar performance of equity investments during the year ended Sept. 30 also boosted the asset totals of other universes of employee benefit funds. The 1,000 largest funds increased 17.8% to $1.578 trillion, from $1.339 trillion, while the Top 200 funds rose 18.4% to $1.198 trillion, from $1.012 trillion.

The Top 1,000 funds had an average of 47.5% invested in stocks, while the Top 200 funds had, on average, 47.1% of their assets invested in equities.

Those same equity investments that had performed well for funds during the past few years quickly turned the table on most investors during the month of October, although pension funds didn't get hurt as much as the stock indexes did (*see accompanying story this page*).

According to *P&I Age* data, the 25 largest employee benefit funds grew 21.4% to $582 billion as of Sept. 30, from $479.3 billion a year earlier, and the 50 largest employee benefit funds increased 20.3% to $794.2 billion, from $660.1 billion the previous year.

Total employee benefit assets of the bottom 800 funds, those with assets between $1.3 billion and $164 million, rose 16.4% to $380.1 billion as of Sept. 30, from $326.5 billion the year before.

Among the Top 200, corporate funds — generally more aggressive in their investment strategies than their public, union or miscellaneous fund counterparts — posted the largest increase, 21.3%, rising to $540.8 billion as of Sept. 30, from $445.9 billion.

# Plan strategies cut crash costs

## Western Teamsters loses just 1.3%

By Nancy K. Webman

Pension funds didn't take nearly as severe a beating in the market crash as the stock indexes did, and asset allocation minimized their losses, a *Pensions & Investment Age* survey shows.

Defined benefit assets of 66 of the nation's largest 200 employee benefit funds surveyed by *P&I Age* declined an average 9.4% during October, faring far better than the Standard & Poor's 500 stock index, which plunged 21.56% in the same month.

**"Asset allocation . . . turns out to be far more relevant than what stocks they bought or what managers they hired."**
**—Gilbert Beebower SEI**

Although the 66 funds had an average of 46% of their assets in the stock market going into the now-legendary month of October 1987, they had more money — an average of 50.9% — in fixed-income instruments.

Those investments, including bonds, short-term investments, guaranteed investment contracts, mortgages and mortgage-backed securities, generally reduced the impact of the stock losses, and scored positive returns for the month, noted Dimitri Raftopoulos, vice president of the advanced product concepts group at SEI Corp., Wayne, Pa.

"Asset allocation, however it is derived, turns out to be far more relevant than what stocks they bought or what managers they hired," said Gilbert L. Beebower, executive vice president of SEI.

"Choices among asset classes made the difference" in October, he said.

That's because "there was no place to hide" in the stock market during that time, said Dan H. Bryant, director of client services at Butcher Consulting in Pittsburgh. "The way not to get killed" would have been to have bought only relatively higher yielding, larger capitalization stocks with lower price-earnings ratios, Mr. Bryant said.

And because stocks that meet all three criteria make up such a tiny per-

*Continued on page 83*

**Small-capitalization stocks of companies like computer technology firm MSI Data Corp. are gaining a place in venture capital portfolios, especially because of their post-Oct. 19 crash bargain-basement prices.**

# Small-cap allure

## Cheap stocks attract venture capitalists

By Trudy Ring

Small-capitalization stocks, available at bargain-basement prices after the October crash, are gaining popularity as a venture capital enhancement or option.

"There are so many small public companies now that are at 10 times earnings, that are financially strong . . . with little or no debt — if I had a bias, it would be toward the public side," said Edward T. Tokar Jr., vice president-investments at the $6.8 billion Allied-Signal Corp. pension fund, Morristown, N.J.

Much of the interest in small-cap

*Continued on page 85*

## LATE NEWS

### Bank of America surrenders

SAN FRANCISCO — BankAmerica Corp., after months of problems with its Bank of America trust accounting system, is shifting most of that institutional trust business to another subsidiary, Seattle First National Bank. Bank of America has spent $60 million to improve the malfunctioning MasterNet system, which cost $20 million. A spokesman said Seattle First's system will take 95% of the bank's clients; arrangements are being worked out for the rest. As of June 30, Bank of America had $16.2 billion in master trust or custody assets for 37 clients.

### New plan to tap assets

NEW YORK — City Finance Commissioner Stanley Grayson wants to use the clout of its $30 billion pension fund to make major investments in local economic development projects. But Comptroller Harrison Goldin and city union leaders are cautious, citing questions of fiduciary responsibility and adequate return.

"Given cuts in federal spending, we have to begin looking at new sources of capital to benefit New York City employees and residents," Mr. Grayson told Crain's New York Business, a sister publication of *Pensions & Investment Age*. Plans are still in the preliminary stages and no investment opportunities have been targeted.

"If he (Mr. Grayson) comes up with something with a market rate of return and acceptable risk, we will go along with it; but we've been unable for years to develop a mechanism for such a comprehensive program," said a spokesman for Mr. Goldin.

### A new view to corporate finance

NEW YORK — With pension funds stepping up their investments in leveraged buy-outs, company workouts and restructurings, corporate finance investing is emerging as a pension investment class of its own, according to New York State Comptroller Edward V. Regan.

Last week Mr. Regan, who oversees the state's $38.7 billion pension fund, also told an Institute for International Research conference on private placements that consultants need to develop the expertise to advise pension funds on strategy and individual corporate finance investments.

"It is essential that pension systems considering corporate finance investments treat them as they do other major investment categories in terms of process and procedure. It is a separate asset class, and needs established standards, selection and monitoring procedures and controls," Mr. Regan said.

### PBGC revises deadlines

WASHINGTON — The Pension Benefit Guaranty Corp. is giving sponsors of defined benefit plans more time to pay the variable portion of the new pension insurance premium.

While employers must pay the $16-per-participant flat rate within two months of the beginning of a plan year, they have 8½ months after the end of the plan year to pay the variable portion. Under the law passed last month, a plan must pay out $6 per participant for every $1,000 of underfunding in addition to the flat rate, up to a maximum total premium of $50 per participant.

## HIGHLIGHTS

### Wall Street brainpower — P. 68

Wall Street investment bankers used a lot of brainpower in 1987 through the creation of innovative public offerings for clients. *Pensions & Investment Age* takes a detailed look at the 14 best deals created by the Street's financial wizards and describes the problems that made clients look to the Street for help.

# 66% drop in portfolio insurance

By Trudy Ring

Portfolio insurance isn't dead, but the pool of assets it covers has shrunk by about two-thirds and the means of implementing it are changing, with options-based strategies attracting interest and assets.

As of Dec. 31, 14 portfolio insurance vendors interviewed by *Pensions & Investment Age* hedged $12.6 billion in the strategy, down from $37 billion as of Sept. 30.

The total portfolio insurance market as of Sept. 30 was about $68 billion (*P&I Age*, Nov. 2); some managers of the strategy declined to provide year-end figures, or could not do so by press time. The $68 billion includes an estimated $22 billion under management for Leland O'Brien Rubinstein Associates Inc., Los Angeles; LOR officials do not divulge this data.

No estimate for LOR is included in the Dec. 31 figure; John O'Brien, chairman and chief executive officer, said assets under management decreased substantially in the fourth quarter, but would not give a dollar figure. Other sources estimated assets covered by LOR programs dropped by between one-half and two-thirds.

"In the current environment, it may be that the cost of portfolio insurance has risen and it may be used less," said Frederick L.A. Grauer, president of Wells Fargo Investment Advisors, San Francisco. Wells Fargo's assets under management for portfolio insurance fell to $3 billion from $9.2 billion in the fourth quarter.

"We certainly are still getting

Turn-around companies like truckmaker Navistar get help from the budget law.

# Some firms get a break

By Marcia Parker

WASHINGTON — Once struggling corporations whose fortunes have improved will be encouraged to make — instead of being penalized for making — large contributions to their underfunded pension plans in a given year under two little-noticed provisions in the new budget reconciliation law passed by Congress last month.

If companies take advantage of the provisions, the huge unfunded liabilities of some corporate pension funds may shrink significantly in 1988 and beyond.

"ERIC had lobbied early on for the elimination of all barriers to full funding," said Marc Ugoretz, executive director of the ERISA Industry Committee, Washington. "We are going to see more

# Congress boosts termination costs

By Nicky Robertshaw

WASHINGTON — Congress just made it more expensive to terminate a pension plan.

Under the Pension Protection Act passed last month as part of the Omnibus Budget Reconciliation Act of 1987, an employer now must pay out for non-vested accrued benefits on top of vested benefits when terminating a defined benefit plan.

The law also contains a little-noticed provision that could cause a flood of pension plan amendments specifying who gets the surplus assets after a termination. Under the provision, employers that terminate plans whose documents don't specify the employer is entitled to the money must wait five years before being able to use the assets. Under the law, such amendments must be in place by Dec. 17, 1988.

Under previous law, an employer needed to cover non-vested accrued benefits only when terminating an overfunded plan and recapturing the surplus assets. Now, an employer must cover the additional benefits in every termination regardless of the plan's funded status. The only exception is when the company can show it qualifies for special hardship rules.

Ambiguous wording in the law left unclear just what employers were liable for if they wanted to end a plan. Last week, the Pension Benefit Guaranty Corp. clarified the "benefit liability" includes accrued non-vested benefits.

But pension experts say the impact of the law won't be that great because any increased obligation stemming from the non-vested benefits is offset to some degree by the reduction in the vesting period to five years from 10, which becomes effective in 1989.

"In view of the shortening of the vesting period, the effect won't be as great as it would have been otherwise," said Gerald Uslander, a principal with William M. Mercer-Meidinger-Hansen, Louisville, Ky.

Many employee benefits experts had asked the government to clarify what they see as ambiguities in the law. Still unclear is whether "benefit liabilities" include such things as death benefits, disability benefits or Social Security supplements.

The PBGC statement "clears up the vested/non-vested problem,

# GTE edict to 24 managers

## Perform or reduce fees

By Jacqueline Dutton

STAMFORD, Conn. — GTE Corp.'s 24 domestic equity managers have been given an ultimatum: Live up to promised returns, or fees will be cut.

The edict was issued last month by John Carroll, president of GTE Investment Corp., which oversees the $11 billion GTE pension and savings plans in Stamford, Conn.

Domestic equity management fees will be based on rolling three-year compound annualized performance figures; managers that don't outperform a specified benchmark by 200 basis points won't get their base fees. Nine GTE managers already are working under a new fee structure, and negotiations are continuing with the remainder.

GTE is believed to be the first corporate pension fund to place all of its equity managers on performance-based fees, although more are expected to follow in reaction to disappointing returns last year.

"It's my judgment that the list of managers who did what they said they would do over time is not very long," Mr. Carroll said.

Although some of GTE's managers expressed concern about how the plan would work, Mr. Carroll said none refused to participate and some have similar arrangements with other clients.

"Maybe the way to view it is that instead of paying for a promise, they will pay for results," said John J. Nagorniak, president of Franklin Portfolio Associates Inc., Boston. He would not release the size of the GTE portfolio.

Franklin Portfolio is one of the managers negotiating its entrance into the fee program this year, with performance linked to the Standard & Poor's 500 stock index. Mr. Nagorniak said he has no problem with adopting a schedule because similar arrangements with other funds have worked well.

BMI Capital Corp., New York, entered the program Jan. 1. Frank Houghton, chairman of the firm, said a strong feature of the GTE program is the use of normal portfolios as benchmarks, which he prefers to the S&P 500 because BMI specializes in small- to medium-capitalization stocks and emphasizes growth. It could not be learned how much BMI manages for GTE.

**"It's my judgment that the list of managers who did what they said they would do over time is not very long."**
**—John Carroll GTE**

Mr. Carroll said performance-linked fees won't make his managers any better at handling their portfolios, nor will it necessarily save money (although a pilot program did just that).

Instead, he said, this arrangement will be more equitable, giving more to the best performers and not rewarding underperformers. "We'd rather reward the guy who did better. Even if the same amount (in fees) is paid, we will have paid them out more fairly," Mr. Carroll said.

"One of the ironies is that you have a lot of managers doing the same thing for you but they are all charging different fees," he said.

As with most performance-linked fee arrangements, GTE will base fees on the number of basis points the manager adds to a hypothetical, passively managed benchmark portfolio, also known as a normal mix, which is designed to match the manager's particular style.

The amount value managers must add to

# In the spotlight:

## Mitchell Hutchins gains visibility in acquisition of MHIC

NEW YORK — Mitchell Hutchins Asset Management, the investment management arm of PaineWebber Inc. and a virtual unknown in pension management, gained immediate visibility when it bought Manufacturers Hanover Investment Corp. for $27 million early this month.

Part of the visibility came from the relatively low price Mitchell Hutchins paid for MHIC's $21 billion in assets, and part from the size of the assets it gained.

Although Mitchell Hutchins had $16 billion under management before the acquisition, only $1.5 billion of that was for tax-exempt clients, mostly acquired during the past two years.

Now it has added the $21 billion of assets managed by MHIC, which will become a separate, but not independent, part of Mitchell Hutchins, with a new name: Mitchell Hutchins Institutional Investment.

Ed Allinson, president, and Cheryl Gruetzmacher, managing director, of Mitchell Hutchins, decided to buy MHIC because the fit was right and the price was right.

Most of the MHIC assets are fixed-income assets, while most of Mitchell Hutchins' assets are equity assets. And Mitchell Hutchins paid less than 1.5 times revenue for the $21 billion in assets, analysts estimated, a low price by industry standards.

"We had a chance to (grow in the institutional business) ourselves, or acquire a firm," said Mr. Allinson. When Mitchell Hutchins was able to buy MHIC for $26 million, it made sense to do the acquisition, he said.

**Cheryl Gruetzmacher, managing director, and Ed Allinson, president, of Mitchell Hutchins, decided to buy the Manufacturers Hanover unit because the fit — and price — were right.**

Although Mr. Allinson would not confirm it, Manufacturers Hanover reportedly expected to get $50 million for the investment management unit when it put it on the block late in 1987.

Ms. Gruetzmacher believes MHIC's investment strengths fit well with Mitchell Hutchins' strengths.

Mitchell Hutchins has strong equity investment management, she said, offering an active core approach that focuses on large-capitalization, growth-oriented stocks. The portfolios have a beta of about 1.1 and the turnover is low, only about 40% per year. (Beta is a measure of risk. A portfolio with a beta of

**The sale of Manufacturers Hanover Investment Corp. to Mitchell Hutchins Asset Management has given Mitchell Hutchins a needed boost of visibility in the tax-exempt investment community.**

# LBO drawing power

## Plans make commitments of $1 billion

By Jacqueline Dutton

Although pension plans liquidated some older leveraged buy-out investments in 1987, they committed more money — at least $1 billion — to buy-outs through new pledges.

Statistics from *Pensions & Investment Age*'s survey of the nation's 200 largest pension funds show most were net liquidators of leveraged buy-out assets in 1987.

But the increased commitment to leveraged buy-outs for 1988 has bolstered the capital reserve of the superfunds, such as the $5.6 billion Kohlberg Kravis Roberts & Co. fund, which has several deals in the works.

Executives of the funds that poured more money into buy-outs in 1987 said they did so to meet target allocations, or as part of an ongoing plan to increase investments to that area.

They weren't anticipating the returns they enjoyed when the stock market was at its peak, nor were they trying to take advantage of lower prices.

For example, the $365 million Avon Products Inc. fund, New York, increased its commitment to leveraged buy-outs to $38 million from $23 million during November to maintain a 10% allocation, said Helmuth Fandl, vice president-pension asset management and insurance. KKR received $10 million and the Blackstone Group LBO fund, $5 million.

"We still feel positive about the strategy," said Edgar Cheney, director-pension investments for the $6.9 billion United Technologies Corp. fund, Hartford, Conn. Mr. Cheney said the fund raised its commitment to $200 million from $70 million during 1987.

Had United Technologies made the bigger commitment earlier, it could have lost valuable returns on then-expensive investments when stock prices plummeted Oct. 19 and deals subsequently fell apart.

"We weren't into market timing," Mr. Cheney said, "but at the time, there were a lot of good partnerships out there."

An even more dramatic example is the $430 million commit-

# Top 200 ranks reflect corporate alterations

By Jacqueline Dutton

Pension plan terminations and restructurings caused some big changes in *Pensions & Investment Age*'s ranking of the nation's Top 200 employee benefit plans.

Among the biggest names to drop from the list was The LTV Corp., Dallas, which had four plans terminated in late 1986 and early 1987. As of Sept. 30, LTV reported $859 million in assets, to rank 305th. The Pension Benefit Guaranty Corp., however, has moved to reinstate three of the plans to LTV, sparking a legal battle.

The Dart & Kraft Inc. plan, Northbrook, Ill., which ranked 131st in 1986 with $1.9 billion in total assets, was split up during a company restructuring in which all non-food divisions were spun off into Premark International. Premark took approximately one-fifth of the Dart & Kraft assets and now ranks 506th with $478 million; the remaining four-fifths are in the Kraft Inc. plan, ranking 161st with assets of $1.7 billion.

McDermott International Inc. ranked 161st in the previous ranking, but slid off the new rankings after the New Orleans-based fund took advantage of new accounting rules that allowed the overfunded plan to buy some $500 million in annuities, according to Mich Pettyjohn, McDermott vice president. The figure no longer is reflected in the pension plan assets but now can be put on the corporate balance sheet as earnings.

The Ashland Oil Inc. fund, Ashland, Ky., fell out of the Top 200 after the company recaptured $250 million in excess plan assets and subsequently established a floor-offset plan. Ashland, which dropped to 310th place with $846 million in total assets from 199th and $1.1 billion, terminated its defined benefit plan and put most of the assets into an employee stock ownership plan and a new, much smaller companion defined benefit plan.

Two state funds that do not invest in equities fell out of the Top 200 during a year in which other public plans achieved meteoric returns on heavy allocations to the stock market. The State of West Virginia retirement systems, Charleston, grew only 2% during the year ended Sept. 30, up to $1.25-billion from $1.23 billion, dropping to 210th from 183rd. The Indiana State Teachers' Retirement Fund, Indianapolis, 179th in the previous survey, fell out similarly, ranking 202nd.

Also off the list were FMC Corp., Chicago; Cooper Industries Inc., Houston; National Intergroup Inc., Pittsburgh; and Continental Can Co., Norwalk, Conn., now known as Kiewit Continental Inc. The assets of the Conoco Inc. fund were included in this year's E.I. du Pont de Nemours & Co. listing.

The Georgia State Retirement Systems, Atlanta, 31st in the previous survey with $8.3 billion in total assets, were listed separately this time. The Georgia Teachers' Retirement System ranked 48th with $7 billion in assets, and The Georgia Employees' Retirement System ranked 104th with $2.8 billion.

New to this year's list were funds that just missed out on previous Top 200 previous ranking, plus a couple of growing firms — Digital Equipment Corp., Acton, Mass., and Merck & Co. Inc., Rahway, N.J.

Digital, ranked 197th with $1.3 billion in assets; it rose 64 notches after reporting $928 million in assets as of Sept. 30, 1986.

A. Raymond Schmalz, manager-U.S. pension fund, credits the ratings boost to Digital's rapid growth — he said contributions and participants are growing steadily each year — and a successful investment program, which included a heavy stock weighting for most of 1987.

Among those that just missed the previous listing are American Electric Power Co., Columbus, Ohio, at 182nd with $1.5 billion; Pacific Lighting Corp., Los Angeles, at 196th with $1.3 billion; North American Philips Corp., New York, 195th with $1.3 billion; The Times-Mirror Co., Los Angeles, 193rd with $1.3 billion; and the Maine State Retirement System, Augusta, 189th with $1.4 billion.

# Bond funds return strong

By Joel Chernoff

While some of the nation's largest pension funds unwound their dedicated bond portfolios last year, the trend toward creating such portfolios picked up steam, experts said.

The creation of a $4 billion dedicated bond portfolio by the Maryland State Retirement and Pension Systems, Baltimore, this fall was the largest program done in recent times, and marks renewed interest in the product.

The $8 billion Maryland system switched "when we came to the conclusion that long bonds would meet our objective with more certainty than any other vehicle," said Bennett Shaver, secretary.

In addition, other Top 200 pension funds added to existing dedicated bond portfolios. Southwestern Bell Corp., St. Louis, moved $600 million into its portfolio from stocks and bonds to cover liabilities for employees who retired in 1985 and 1986, said Roger Wohlert, assistant treasurer-corporate finance. And the Minnesota State Board of Investment, St. Paul, added about $700 million to its portfolio to cover new retirees, said Howard Bicker, executive director.

Interest in dedicated bond funds had waned from their popularity peak in the early and mid-1980s. Part of their great appeal at that time was they enabled corporate pension fund executives to set up high-yielding portfolios while lowering corporate pension contributions.

The portfolios match bond cash flows with an expected stream of liabilities, usually those for retirees. Because the yields are locked in, plan sponsors were able to build those higher rates into their actuarial rate of return assumptions.

But the adoption of the Financial Accounting Standards Board's Statement 87 on pension accounting rules eliminated the bookkeeping advantage, because now current market rates are used for valuing assets.

(An immunized bond portfolio, a form of dedication, involves matching the duration of a bond portfolio against the duration of liabilities to protect against interest-rate fluctuations, but does not involve matching cash flow with liability streams.)

The move toward dedications surprised some professionals.

Martin L. Leibowitz, managing director at Salomon Brothers Inc.'s bond portfolio analysis group, had predicted last spring a high percentage of such portfolios would be liquidated (*Pensions & Investment Age*, March 23).

"What we did not fully foresee was that dedications serve another purpose," he said. The portfolios provide a "comfort level" to various parties, such as plan participants and corporations, by providing a "reliable, well-defined, quality and secure process," he explained.

"Dedication has in fact had a

*Continued on page 57*

# Indexers most popular

By Marlene Givant

Although teen-agers will attest that measuring popularity isn't easy, in the case of money managers, the task is straightforward.

According to results of *Pensions & Investment Age*'s survey of the nation's largest employee benefit funds, indexers were the most widely used managers in several categories.

Of the 647 managers used by the nation's largest pension funds, the most widely used managers overall were J.P. Morgan Investment Management Inc., New York, claiming 62 clients among the Top 200.

Prudential Asset Management Group, Newark, N.J., had 57 clients.

Bankers Trust Co. — Investment Management Group, New York, a major index player, had 52 clients.

Aetna Life Insurance Co., Hartford, Conn., boasted 45 clients, and Trust Co. of the West, Los Angeles, had 44.

"All of the top five overall have been aggressive developers of new products," said Ronald A. Jones, partner with Hewitt Associates, Lincolnshire, Ill.

"They looked for a need and sought to fill it or developed demand for a product by offering one."

He cited as an example Bankers Trust, which capitalized on the apparent demand for passive products.

The managers that fill out the list of the 10 most-used management firms include three that have been successful at attracting clients for passive management.

Wells Fargo Investment Advisors, San Francisco, was used by 43 of the Top 200 funds.

Mellon Capital Management, San Francisco, had 42 clients.

And Alliance Capital Management, New York, which also ranked as the favorite equity manager, was next with 41 clients.

Jennison Associates Capital, New York, ranked ninth with 34 clients.

Jennison was followed by Equitable Capital Management Corp., New York, and Pacific Investment Management Co., Newport Beach, Calif., the top fixed-income manager, which tied for 10th place with 33 clients each.

The managers among the Top 10 overall often were repeaters in several categories.

Morgan ranked 10th among real estate managers; second among bond managers and tied for eighth among equity managers.

Prudential was top in real estate and third in GICs (with Aetna).

Bankers Trust ranked ninth for bonds (with State Street Research & Management Co., Boston), second for cash and short-term assets (along with Discount Corp. of New York Advisers, New York and Mellon) and fourth for equities.

Aetna was fourth for real estate (with Equitable) and third for GICs (with Prudential).

And TCW was third among balanced managers and tied for second with JMB Institutional Realty, Chicago, for real estate.

Mellon ranked second (along with Bankers and Discount Corp.) for cash and short-term assets and fifth for equities (in a tie with Delaware Investment Advisers, Philadelphia).

Wells Fargo and Equitable were among the top managers for only one category outside overall management.

Wells ranked third for equities while Equitable was fourth (along with Aetna) in real estate.

Only Jennison ranked among the Top 10 overall without gaining that distinction in a separate category.

The top international managers were not singled out because some funds responding to the Top 200 survey did not distinguish international from domestic equity managers.

The Top 200 funds reported using 87 real estate managers and 26 GIC managers, but only 33 balanced managers and 22 cash and short-term managers.

As for staple assets, funds used 157 bond managers and more than double that amount — 347 — equity managers.

Five of the top managers overall ranked among the top equity managers.

By number of clients, the most used equity managers was Alliance, with 34.

Following Alliance was Capital Guardian Trust Co., Los Angeles, with 32.

Wells Fargo was next with 26.

Following Wells Fargo was Bankers Trust, with 24.

Mellon and Delaware were next, tied with 19.

INVESCO Capital Management, Atlanta, was next with 18.

Trinity Investment Management Corp., Boston, and J.P. Morgan followed, tied at 17.

And Batterymarch Financial Management and State Street Research & Management Co., both in Boston, were next, tied at 16.

Alliance was No. 1 in equities despite its specialty in growth stocks, which have underperformed the market for several years.

And Batterymarch still is popular even though it lost a number of clients in 1987 because of poor performance (*P&I Age*, May 4).

The leading bond manager was PIMCO, with 28 clients. J.P. Morgan was second, with 23. Criterion Group, Houston, was third with 14. Loomis, Sayles & Co. Inc., Boston, was fourth, with 13.

Tied for the next spot with 12 clients each were Lehman Management Co., New York; MacKay-Shields Financial Corp., New York, and Miller, Anderson and Sherrerd, Bala Cynwyd, Pa.

Fischer, Francis, Trees & Watts Inc., New York, were ranked next among bond managers, with 11 clients. And Bankers Trust and State Street Research were tied with 10 clients.

The top equity and bond managers were for the most part seasoned firms.

"They're what I call long-term survivors; not always on top (in performance) but for the most part survivors by not failing," Mr. Jones said.

Trinity is one exception because it's a relative newcomer with about five or six years as a large, aggressive firm, he added.

The real estate list, longer than the rest because of many ties among rankings, was led by Prudential, which had 31 clients. TCW and JMB followed, with 30; Aetna, Equitable and The RREEF Funds, San Francisco, with 27; LaSalle Advisors Ltd., Chicago, with 14; and Heitman Advisory Corp., Chicago; and Security Capital Real Estate Corp., New York, with 13.

Four firms tied for 10th place, with 11 clients each: Aldrich, Eastman & Waltch, Boston; Coldwell Banker, Los Angeles; Copley Real Estate Advisors, Boston; and J.P. Morgan.

John Hancock Financial Services, Boston, and Metropolitan Life Insurance Co., New York, headed the GIC team, with six clients.

They were followed by Aetna and Prudential with five clients; The Travelers Cos., Hartford, Conn., with three; and The New England, Boston, and New York Life Insurance Co., New York, with two.

The top three balanced managers were The Boston Co. Inc., Boston; Loomis, Sayles; and TCW. ■

* Based on pension assets, not total assets
** Total is greater because some funds did not break out assets

## How it was compiled

The information on employee benefit funds contained in this issue was developed in several steps.

Questionnaires were sent to the more than 1,200 funds in *Pensions & Investment Age*'s data base. The largest 200 and largest 1,000 were identified from the completed questionnaires, follow-up telephone calls and a cross-check with information supplied by Money Market Directories Inc., publisher of the 1988 Money Market Directory of Pension Funds and Their Investment Managers.

The more detailed information contained in the profiles of the 200 largest funds was obtained from the completed questionnaires, interviews with fund officials and articles published in *P&I Age*.

In most cases, the information reflects fund operations as of Sept. 30, 1987.

In cases where the fund supplied data considered too dated, *P&I Age* estimated the asset growth based on one of the following methods: the asset mix the fund supplied for last year's survey; the asset mix reported in Money Market Directory; or *P&I Age*'s reported average asset mix for the type of fund, i.e., union, corporate or public.

Where no information was available from the fund, statistics were taken from the 1988 Money Market Directory.

In the tables accompanying the profiles, all figures except for internal management and defined contribution plans are based on defined benefit assets. The asset mixes for the Top 200 and Bottom 800 funds represent the average of all reported mixes for the respective funds. NA (not available) was applied to funds that had less than $1 million allocated to the particular investment as well as to funds that could not provide a breakout of assets but are known to invest in those areas. Dollar amounts in all charts were rounded to the nearest million.

# A rocky ride in '87

## PBGC on roller coaster with liabilities, personnel

By Nicky Robertshaw

WASHINGTON — The Pension Benefit Guaranty Corp. saw its liabilities seesaw in the 12 months ended Sept. 30.

With the arrival and subsequent departure of nearly $2 billion in liabilities from three underfunded plans of The LTV Corp., the Pension Benefit Guaranty Corp.'s liability soared to $3.8 billion, then dropped below the $2 billion mark by Sept. 30.

Although final figures are not available, the PBGC estimates that if the courts uphold the restoration of the three plans to LTV, the total liability will be somewhat less than $2 billion. The final home of the plans will be decided by U.S. District Court in New York.

PBGC officials would not release the size of the agency's assets as of Sept. 30. Although officials would not be specific, *Pensions & Investment Age* estimates the PBGC lost $146 million in October because of the market turmoil. Post-crash and without LTV, *P&I Age* estimates assets of the agency at $2 billion.

Noting the year started with grave problems for the PBGC and threats to its well-being, Executive Director Kathleen P. Utgoff called 1987 a "pivotal year" that ended with the situation significantly improved.

She pointed to the restoration of the LTV funds as helping reverse a trend in terminations of large, unfunded pension plans, such as those of Wheeling-Pittsburgh Corp. and Allis-Chalmers Corp. in 1986. In addition, provisions of the Budget Reconciliation Act of 1987 not only would reduce the liabilities in plans that are terminated in the future, but also could make companies less likely to terminate.

It also was a pivotal year in terms of fund personnel, as the two top investment officers left the PBGC in late 1987. They have not yet been replaced.

Jay A. Jupiter, who had been investment management director for the financial operations division of the PBGC, moved to the Federal Home Loan Bank Board as deputy director of its mergers and acquisitions program in October.

Julie H. Shriver, who was manager of the investment management division, left in December to become an investment officer for the International Monetary Fund staff retirement plan.

As a result, Larry Maslin, director of the financial operations department, is temporarily in charge of investments as acting director of the investment management division.

Wilshire Associates, Santa Monica, Calif., which was hired earlier this year, will help with overall managerial advice and investment guidance.

Except for the five farm equity managers hired a year ago — Disciplined Investment Advisors, Evanston, Ill; Furman Selz Capital Management Inc., New York; Loomis, Sayles & Co. Inc., Pasadena, Calif.; J.P. Morgan Investment Management Inc., New York; Nelson, Benson & Zellmer Inc., Denver — there have not been any other additions to the PBGC's money managers.

Its other managers are, for equities: American National Bank & Trust of Chicago; Chase Investors Management Corp., New York; Dimensional Fund Advisors, Santa Monica, Calif.; First RepublicBank, Dallas; Lazard Freres Asset Management, New York; Lehman Management Co., New York; McCowan Associates Inc., New York; and United Capital Management, Denver.

Its bond managers are Pacific Investment Management Co., Newport Beach, Calif., and Morgan Stanley Asset Management, New York.

State Street Bank and Manufacturers Hanover serve as master trustees. ■

# Bond indexing booms

By Trudy Ring

Bond indexing by the nation's largest pension funds soared in the year ended Sept. 30, while stock index funds, after allowing for market gain, showed a net loss of assets.

Of the Top 200 funds, 41 reported using bond index funds, with a total of $45 billion in the strategy, including $2.7 billion run in-house. A year ago, 32 funds had indexed bonds, with $13.8 billion invested.

In the 12 months ended Sept. 30, the Shearson Lehman Government/Corporate bond index was down 0.4%; this would have brought the 1987 figure to $13.75 billion without new contributions. Using that as a base, the assets in indexed bonds grew 227% in the year ended Sept. 30.

As of Sept. 30, 105 of the Top 200 funds reported using indexed stocks, with $141.3 billion invested, including $62.97 billion run in-house. A year earlier, 100 funds reported $108.9 billion in indexed stocks.

The 43.5% gain of the Standard & Poor's 500 stock index in the 12-month period would have brought the 1987 figure to $156.3 billion without new contributions — so, assets in stock index funds actually decreased 9.6%. At least part of the decrease can be accounted for in funds not revealing the amount of their indexation.

The indexed bond surge largely was because of public funds. The $33.6 billion New York City Retirement Systems continued restructuring their bonds, raising their indexed total to $18.31 billion from $458 million a year earlier.

The $23.7 billion California State Teachers' Retirement System, Sacramento, moved fixed income assets to indexation from active management, preparatory to bringing it in-house. It had $5.8 billion in bond index funds as of Sept. 30; last year it reported none.

The $8.5 billion Exxon Corp. pension fund, New York, and the $3.2 billion Mississippi Public Employees' Retirement System, Jackson, both completed expected moves in increasing their bond index funds. Exxon's rose 61.8%, to $377 million, while Mississippi's increased 58%, to $980 million.

Stock indexing had at least one major dropout, while another cut back indexed stocks to harvest gains.

The $44 billion California Public Employees' Retirement System, Sacramento, eliminated a $5.5 billion S&P 500 fund and put the assets in six core portfolios that are managed passively, but not indexed.

The $8.2 billion Maryland State Retirement and Pension Systems, Baltimore, sold $2.3 billion in indexed stocks in late September, using the proceeds to fund a portion of a $4 billion dedicated bond portfolio. As of Sept. 30, Maryland's indexed stocks stood at $1.91 billion, down from $2.7 billion a year earlier. ■

Quick! What's the latest rate to move your freight from here to there?

To compete, shippers need the answer in seconds. To provide it, Norfolk Southern has pioneered Thoroughbred Quickfo.SM

This computer system ends the time-consuming task of studying thousands of rates. Shippers simply enter their commodity code, origin and destination on their own desktop computers. In an instant, they get the right response. They can even pinpoint the location of shipments.

Shipper-friendly computer technology is just one way Thoroughbred Service makes shipping easier and more efficient. For up-to-the-second answers about its advantages, make one quick call to the nearest Norfolk Southern sales office.

SPLIT-SECOND RESPONSE.

LOS ANGELES — Atlantic Richfield Co.'s total assets grew 19.9% to $3.236 billion from $2.7 billion for the year ended Sept. 30, mainly because of a 32% increase in defined contribution plan assets. The defined benefit plan grew almost 16%, but the stock market crash wiped out almost all gains as the the plan lost 15% of assets during October. The affect of the market crash on the total portfolio mix reduced stocks by a few percentage points while bonds and cash portions made up the difference.

**Equity managers:** Capital Guardian; Emerging Markets; G.T. Capital; Rowe-Price, Fleming; Warburg.

**Fixed-income managers:** Baring; Fiduciary Trust; MacKay-Shields; J.P. Morgan, Solomon Asset Management.

**Real estate managers:** Aldrich, Eastman & Waltch; Fox Group; Lehndoff & Babson.

The master trustee is State Street.

The key person overseeing the investment management of the fund is E. Kent Damon Jr., vice president and investment officer.

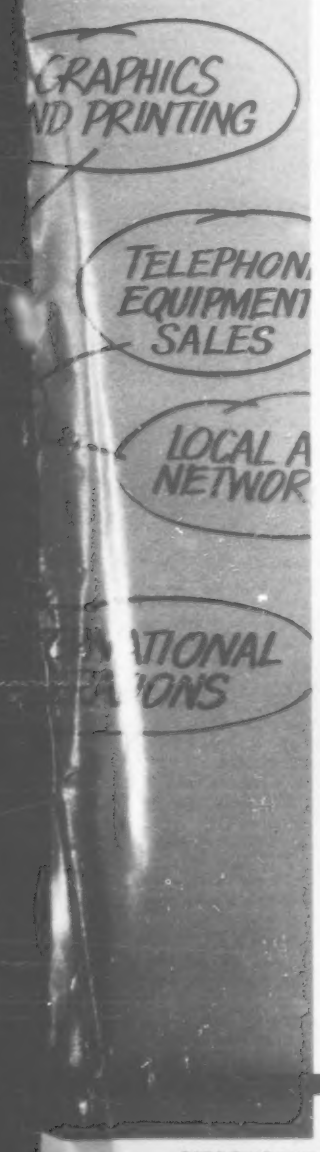
1S growing by design.



BellSouth's telephone operating companies, Southern Bell and South Central Bell, continue their remarkable growth, offering new products and services to an expanding customer base of over 14 million homes and businesses.

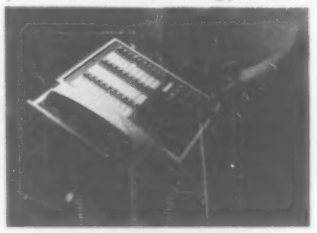
At the same time, BellSouth is committed to growth through developing new businesses that are a natural outgrowth of BellSouth's telecommunications expertise.

On January 1, 1986, BellSouth Enterprises was formed. Its purpose: To direct all BellSouth subsidiaries in businesses other than regulated services provided by Southern Bell and South Central Bell.

Today BellSouth Enterprises consists of three groups comprising a rapidly growing number of companies and joint ventures operating throughout the U.S. and around the world.

An Industry Leader In Directory Advertising And Publishing

The companies of the BellSouth Advertising and Publishing Group include the leading publisher of traditional and specialized directories. In addition, these vertically integrated companies also offer expertise in advertising sales, computer-based pre-press production and photocomposition, graphics, printing and binding, and are on the leading edge of four-color print production technology.



Helping Companies To Manage Information

The BellSouth Communications Systems Group markets the products and services that keep BellSouth in the forefront of the telecommunications industry. Throughout the U.S. and Europe, the Group offers a range of products from office automation equipment to computer leasing and maintenance.

Focusing On The Booming Cellular Market

The companies of the BellSouth Mobile Systems/International Group focus primarily on the rapidly growing mobile telephone market. Already in many major American cities, BellSouth companies and joint ventures are quickly penetrating cellular phone markets in England, Western Europe and Australia.

In the years to come, BellSouth Enterprises will continue to play an important role in BellSouth's commitment to maintain high service standards, to emphasize telecommunications and to pursue orderly corporate growth. With such a strategy, it's no wonder the future looks so exciting for BellSouth.

CHICAGO — Commonwealth Edison Co. had $1.951 billion in defined benefit assets as of Sept. 30, an increase of 15.6% from $1.687 billion the previous year. As of Nov. 1, the company's assets had fallen 9.3% to $1.77 billion as a result of the market turmoil during October. Fund officials declined comment on changes in the asset mix.

The bulk of the assets, $1.629 billion, is managed internally. The balance of the money is run by various commingled fund and mutual fund managers, which Commonwealth Edison officials declined to identify.

The master custodian is The Northern Trust Co.

Key personnel overseeing the investment management of the fund are Howard R. Carlson, manager of investments; Jack A. Cerney, equity portfolio manager; and Rickard P. Schwartz, fixed-income manager.

WILMINGTON, Del. — The E.I. du Pont de Nemours & Co. total benefit assets include the funds for Conoco, which du Pont took over several years ago but just placed under the same management as du Pont's fund. Total benefit assets increased 15.9% to $16.459 billion from $14.205 billion for the 12 months ended Sept. 30. As of Oct. 31, total assets were $15.133 billion, reflecting the market crash and the company's movement of $1 billion out of equities during September. The percentage in stocks was down and the portion in bonds was up as a result of market conditions.

**Equity managers:** Fred Alger; Batterymarch; GAMCO; Helman Jordan; J.P.Morgan; Rogers Casey Barksdale.

**Fixed-income managers:** John Hancock; Solomon Asset.

**Real estate managers:** First RepublicBank, Hancock, J.P. Morgan.

The primary master custodian is Wilmington Trust.

Key personnel overseeing the investment management of the fund are Keith E. Tucker, vice president; Edward J. Bassett, director of equity investments; and Lawrence R. Starrall, director of fixed-income investments.

NEW YORK — The Episcopal Church Pension Fund's total employee benefit assets increased about 19% to $1.488 billion from $1.25 billion for the year ended Sept. 30.

The assets fell 4.6% to $1.42 billion for the period Sept. 30 to Oct. 31, according to Robert A. Robinson, president of the fund. He attributed the relatively mild loss to the fund's dynamic hedging program.

**Equity managers**: (domestic) Alliance and J.P. Morgan. (International) J.P. Morgan.

**Fixed-income manager:** J.P. Morgan.

**Real estate manager:** J.P. Morgan.

The master trustee is J.P. Morgan.

Key personnel overseeing the investment management of the fund are Mr. Robinson; Walter F. Donnelly, executive vice president; and Frank I. Squeri, senior vice president.

Key personnel overseeing the investment management of the fund are M.E. Maertens, manager-trust investments, and P.E. Sharp, assistant treasurer.

*The Creation of Extraordinary Value is the Result of Extraordinary Vision*

- - the Rembrandt Philosophy

*A* profitable investment portfolio, like the great artist's work on canvas, is rarely the consequence of whim or chance. At Tomlin Properties, we have that extraordinary vision to create extraordinary value with exceptional returns through 17 years of investing in Predevelopment Land.

***"Heaven forbid that I should ever see things the way they do!"***

Rembrandt worked to see what few around him saw. And he created masterpieces. At Tomlin Properties, we've cultivated an approach that looks beyond what "conventional wisdom" might suggest. While some view land as risky business, we've created an approach that proves this is a bit short sighted. With over eighty investments in predevelopment land, *we've proven that predevelopment land is a prudent investment.*

***"Secret . . . fiddlesticks! I start with a formula, and work to prove that it is correct."***

Don't misunderstand. When we speak of "vision" we're not referring to some nebulous "feeling" we get about a parcel of land. The Tomlin formula is based on *detailed research, intensive management* and *hard work*. That experience has been the cornerstone of our success. With a keen eye on the nation's prime growth markets, we begin with the parameters of a cautious investment clearly in focus: location of the land, and timing of the acquisition. Assessed correctly, these are the factors which *minimize risk* and maximize return. Additionally, we only invest in those cities where we have *on-site local management* offices: *Dallas, Los Angeles, Houston, Atlanta, Phoenix and Washington, D.C.* Local Tomlin executives who know the market and who know how to maximize each property's potential. Time and time again our clients have enjoyed the fruits of this approach.

***"Perhaps 400 years from now, if any of my pictures are left, they will say, 'this fellow was going in the right direction'."***

Rembrandt knew that time was the ultimate test of the value of his art. Fortunately we're not looking at a 400 year waiting period. Instead, our average investment period is much shorter than you might expect. History tells us that land has been profitable for the patient sophisticated investor. And while not all land is suitable for capital growth investments, we live in a world where predevelopment land in ideal locations is a diminishing resource. Its appreciation potential is great, while the measured risks are comparable to the most traditionally conservative portfolio components. And Tomlin Investments in predevelopment land continually outperform other forms of real estate, stocks, bonds, and treasury bills. *Our clients agree — we've passed the test of time. And the result is extraordinary value.*

STAMFORD, Conn. — GTE Corp.'s total employee benefit assets grew 23.5% in the year ended Sept. 30, to $11.065 billion from $8.962 billion. Defined benefit assets alone grew 22% to $9.668 billion from $7.924 billion during the period.

But much of those gains were lost during the month of October, when the defined benefit plan dropped 15.2% to $8.2 billion.

The asset mix shifted mostly in favor of bonds and away from cash as a result of the crash, with equity at nearly the same proportion. The bond segment of the portfolio rose to 27% from 18%, while cash decreased to 2% from 11%.

CHICAGO — Inland Steel Industries employee benefit assets increased 11.4% to $1.84 billion as of Sept. 30 from $1.652 billion a year earlier. Defined benefit assets increased 14.3% to $1.581 billion from $1.383 billion.

Allan R. Phillips, consultant for the fund, estimated total assets dropped 11% as of Oct. 31, with defined benefit assets alone dropping almost 12%. After the crash, price changes and new investments of cash altered the asset mix. The mix as of Oct. 31 was 46% stocks, 27.4% bonds and mortgage-backed securities, 10.6% cash, 7.1% real estate equity and 8.9% GICs.

Who did Helene Curtis turn to for styling their Master Trust?

HELENE CURTIS

For this fast-growing national and international provider of hair and personal care products, managing a myriad of financial operations was something they did themselves—singlehandedly.

Until, that is, they learned how the team at Harris Bank could lend a helping hand; adapting to Helene Curtis' style and becoming a seamless extension of their management team.

Now, the Harris produces benefit payments, stock distributions, and profit-sharing loans, as well as providing valuable information on the investments in the company's profit-sharing and ESOP plans. It not only makes good, cost-efficient business sense in the short term, it allows Helene Curtis to concentrate on global expansion of their successful Suave,® Finesse® and other brands.

Why not see if personal care from the Harris team can smooth out the snarls in your financial operations with a more manageable Master Trust plan.

Call our Marketing Representative at (312) 461-7956.

The Harris. Move up to the Banking Lion.

Harris Trust and Savings Bank, 111 W. Monroe St., Chicago, IL 60603. Member FDIC, Federal Reserve System.

dropped to 39% after the crash; the difference was made up mainly in the bond and cash segments, up four percentage points each.

BALTIMORE — Benefit assets of the Maryland State Retirement and Pension Systems totaled $8.274 billion as of Sept. 30, an increase of 22.1% from the $6.778 billion reported as of June 30, 1986.

After Sept. 30, but before the Oct. 19 market crash, the fund sold $2.3 billion in equities and established a $4 billion dedicated bond portfolio. This resulted in an asset mix of 35% stocks, 50% dedicated bonds, 13% actively run bonds and 2% in real estate. As of Nov. 30, the asset mix had shifted further to 26.5% equities, 52.2% dedicated bonds, 20% active fixed income and 1.3% equity real estate.

**Equity managers:** Alliance; Atlanta; Capital Guardian; Dimensional Fund; Eaton Vance; Hagler, Mastrovita & Hewitt; Investment Advisors; Investment Counselors of Maryland; MacKay-Shields; Scudder, Stevens & Clark; State Street Research; and Wellington Trust.

**Fixed-income managers:** Investment Counsellors of Maryland; Mercantile Safe; Miller Anderson Sherrerd; Morgan Stanley Aaset; PIMCO; and Standish Ayer and Wood.

**Real estate managers:** CIGNA; Copely; J.P. Morgan; and Security Capital.

The master custodians are Depository Trust Co. and First National Bank of Maryland.

Key personnel overseeing the investment management of the fund are Howard J. France, executive director for investments; Arthur M. Lynch Jr., director of actively managed investments; and Lawrence J. Bach, director of passively managed investment.

| Real estate equity | 11% |

NEW YORK — Metropolitan Life Insurance Co.'s own employee benefit assets grew 10.1% to $3.113 billion from $2.828 billion during the year ended Sept. 30; defined benefit assets increased 7.8% during the same period, to $2.318 billion from $2.15 billion. All assets are managed internally.

Most of the gains were lost during the month of October, however, when total assets slid 6.8% to $2.9 billion as of Oct. 31.

The portfolio mix changed as a result of the market crash: stocks were reduced to 20%; fixed income was increased to 68%; and real estate equity was raised slightly to 12%.

The company's corporate management office oversees investment management of the assets; J.L. Rubsam, administrator, has day-to-day responsibility.

LANSING, Mich. — Total benefit assets of the Michigan State Employees' Retirement Systems grew 22.8% to $16.68 billion as of Sept. 30, 1987, from $13.58 billion as of Aug. 31, 1986. Defined benefit assets alone rose 18.4%, to $16.073 billion from $13.58 billion. All assets are managed internally.

Because of the market volatility, total assets dropped 10.6%, to roughly $14.9 billion, and pension assets dropped 11%, to roughly $14.3 billion, as of Oct. 31.

Michigan had been selling stocks in the days before the Oct. 19 plunge, bringing its equity allocation down to 36.1% by the end of the month. Other asset classes whose allocations changed significantly by Oct. 31 were cash, up to 22%, and bonds, up to 24.2%.

The master custodian is the state treasurer, with settlement services provided by National Bank of Detroit.

Key personnel overseeing the investment management of the fund are Robert A. Bowman, state treasurer; W.A. Amerman, director of investments; and Barry Stevens and Gordon Linsday, assistant directors.

# Kemper retires some old ideas about 401(k)s.

**"They're a nightmare to administer."**
Not our 401(k)s. Kemper handles all the details, from helping to design a plan that meets your needs to presenting it to your employees to record keeping and reporting.

**"They lock you into one or two investments."**
Many plans do. But a Kemper 401(k) offers a whole family of mutual funds and annuity products managed by Kemper Financial Services, Inc. Your employees can choose their own investment course ranging from aggressive growth funds to U.S. government security and money market funds.

**"They're expensive."**
We can show how the implementation of a 401(k) plan need not be a costly employee benefit for your company. For a look, a free video cassette, and prospectuses containing more complete information, including management fees and expenses, call us today. Please read the prospectuses carefully before investing or sending money.

**Call us toll-free at:**
**1-800-356-1010, Ext. 1442**

**Kemper. There's never a bad time to make a good investment.℠**

CHICAGO — Navistar International Corp.'s employee benefit assets fell 3% in the year ended Sept. 30, 1987, to $1.606 billion from $1.655 billion. Defined benefit assets fell by the same

We'd show you our technology. But we'd makes it so

These days, a lot of people judge banks by the technological advances they offer. But it's far more revealing to judge a technological advance by the bank that offers it -- and the people who support it.

In that light, we invite you to evaluate Chase Master Trust's two new systems — TITAN and FolioVision.

TITAN is the most advanced on-line accounting and reporting system available today. It gives you access to daily audited data on all your portfolio transactions — integrating all your investment managers and giving you the accuracy you need to manage your fund.

And because analysis is no less vital, we've developed FolioVision, our new performance measurement and analytics service. FolioVision lets you compare your managers' performance against their peers or against any benchmark you choose. You can even create your own benchmark — because FolioVision is totally flexible.

SANTA FE, N.M. — Pension assets at the New Mexico Public Employees Retirement Association grew 18.3% in the 12 months ended Sept. 30, to $1.471 billion from $1.243 billion.

Because of market volatility, assets declined 7.4% during October, to $1.382 billion as of Oct. 31.

During October, the fund pulled back its stock position, shifting assets into bonds and cash. By Oct. 31, the asset mix was 26% stocks, 47% bonds, 17% cash, with basically the same allocations in other asset classes.

**Equity managers:** Criterion and INVESCO.

remarkable new rather show you what remarkable.

But what makes TITAN and FolioVision so remarkable is the fact that they incorporate a feature only we can offer: Chase people. We have two teams of Chase consultants who work directly with you.

Our TITAN consultants will assist you with everything from PC downloading to changing reporting formats to graphic presentations of your portfolio data. While the Chase Financial Consultants will help you with FolioVision, asset allocation, asset-liability modeling or any other consultation you may need.

It's that kind of customized service and personal attention that truly distinguish TITAN and FolioVision from other banks' high-technology products. Because unlike other banks, we don't look at technology as an opportunity to eliminate personal service.

We see it as a way of enhancing it.

| GICs | 3.2% |

NEW YORK — Total employee benefit assets of the New York City Retirement Systems increased 9% in the year ended Sept. 30, to $33.633 billion from $30.839 billion. Defined benefit assets rose 7.9%, to $32.104 billion from $29.767 billion during the same period.

After the October market crash, assets totaled $31.475 billion, a drop of 6.4%.

Five retirement plans comprise the city retirement systems: the $13.803 billion New York City Employees' Retirement System; the $1.838 billion New York City Fire Department Pension Fund; the $5.042 billion New York City Police Department Pensions Fund; the $7.327 billion New York City Teachers' Retirement System; and the $504 million (as of Sept. 30) Board of Education Retirement System. The investments of the employees', police and fire funds are handled by the city comptroller's office. The comptroller also handles the fixed-income assets of the teachers' and board of education funds.

The teachers' system's variable annuity programs are composed of a tax-deferred annuity, Variable Fund A, which is invested in equities, and Variable Fund B, which is invested in guaranteed investment contracts. The Board of Education fund invests in Fund A.

As of Sept. 30, Fund A reported $4.179 billion in assets (including $72 million from the board of education fund) and Fund B, $1.014 billion. Reflecting its equity orientation, Fund A dropped 15.9% during October's market volatility, to $3.515 billion as of Oct. 31, but Fund B rose slightly, to $1.024 billion. The 1% gain was attributed to interest earned on GICs.

**NYC retirement equity advisers:** Bankers Trust; Batterymarch; Lazard Freres; Oppenheimer; Provident Capital; and Stein Roe.

**Teachers' equity managers:** Axe Core; Bankers Trust; Batterymarch; Concord Capital; John Levin; Mellon; Metropolitan Life; Prudential; Scudder, Stevens & Clark; Sound Shore; Trinity; and Wells Fargo.

**NYC retirement fixed-income advisers:** Bankers Trust; Bear Stearns; BEA; Chase Investors; Fiduciary Trust; Fischer, Francis, Trees & Watts; Investment Advisers; Kennedy Associates; Lehman Management; Lincoln Capital; Manufacturers Hanover; Mellon Bond Associates; Miller, Anderson, Sherrerd; PIMCO; Putnam; RCM; Smith Barney; State Street Bank; T. Rowe Price; Weiss, Peck & Greer; and Wells Fargo.

**Teachers' fixed-income/short-term managers:** Dimensional Fund; MacKay-Shields; Payden & Rygel; and Putnam Advisory.

**Teachers' GIC managers:** Bank of America; Metropolitan; New York Life; and Prudential.

Master custodian for the assets handled by the city comptroller's office is Citibank; the investment consultants are Callan Associates; SEI; and Rogers, Casey & Barksdale.

Master custodian for the teachers' and board of education assets is Irving Trust Co.; the investment consultant is Rogers, Casey & Barksdale.

Key personnel overseeing the investment management of the NYC fund are Beverly L. Hamilton, third deputy comptroller; William Paolino, bureau chief; John J. Burns, senior fixed-income analyst; and Lisa Malanchuk, senior equity analyst.

Key personnel overseeing assets of the teachers' fund are Donald S. Miller, executive director; Patrick J. Kiernan, deputy director-fiscal; and Diane R. Sisenwien, portfolio administrator.

# One reason we're $4 billion strong.

Managing investments for endowed chairs and other university funds is something we do extremely well. It's one of the reasons why Trusco Capital Management now manages more than $4 billion in assets for a diversity of clients. Not only educational institutions, but corporate pension and profit-sharing plans, foundations and insurance companies as well.

As a core investment manager, we meet our clients' equity, fixed income, or balanced portfolio needs through our disciplined investment process. And we offer continuity. Our senior investment professionals have worked together for an average of 19 years.

Add up these qualifications, and you'll be quick to see why we manage money for a lot of chairmen. Write for our brochure or call Paul L. Robertson, Vice President, at 404-827-6868.

PORTFOLIO MANAGERS:

EXECUTIONS DON'T HAVE TO BE CAPITAL PUNISHMENT.

DON'T RISK OFF-FLOOR TRADES. GET THE POWER OF PIT-VANTAGE™.

The Crash of '87 is convincing proof! The risk in trading financial futures off-the-floor (with or without stops) is a risk you should not be taking in today's triple-digit volatility. You need pit-originated trading expertise.

In these erratic markets, fast and accurate order executions are critical to your hedging needs. Now, more than ever, pit presence makes the difference between hedging strategy and execution success. With Haigh Financial's team of professional floor traders you get the pit presence you need for quality, confidential executions with minimal slippage.

Our vantage point in the trading pits is called PIT-VANTAGE™. It identifies the pit advantage we offer your financial futures and options executions. PIT-VANTAGE™ provides the institutional client customized floor execution and hedging program strategies under direction of Barry C. Haigh, Chairman.

We don't hold futures positions overnight. So, we avoid the risk of waking up to bad news, and margin requirement increases don't affect our performance.

You are urged to learn the unique advantages available to you through the power of PIT-VANTAGE™. To discuss your specific financial futures execution needs in confidence, please contact Jim Patterson, President.

Isn't it about time someone combined low volatility with above-market performance?

We believe that every client who chooses active investment management is entitled to something less and something more. Less of the market's erratic behavior, and more gains than the market produces on its own. Our system of controlled portfolio diversification, combined with our "Value Plus" investment process can do just that.

We are Marinvest, where our portfolio managers work together as teams. Our "Value Plus" equity management and diversified fixed income portfolios have been successful because a systematic approach assures portfolio diversification.

We have an investment approach we'd like to tell you about. And a performance record that speaks for itself.

*We manage to manage risk.*

# *We don't react at the drop of an interest rate.*

Successful investing depends a lot more upon how well you react to market changes than upon how quickly.

This is not to say that we don't change as conditions change. We do. We just don't believe that something as important as your retirement fund portfolio should be altered by short term factors.

Our goal is to deliver long term growth through equity investments and prudent portfolio balance through sound fixed-income management. We believe we're uniquely qualified to meet these objectives.

Because at David L. Babson & Company, we have a very simple philosophy: the best way to achieve investment success is to start with the best people. And then give them the resources and the power to make decisions. Informed decisions.

How do we attract and keep the best people? By giving them the opportunity literally to be a part of the company. Our company is owned by the active members of the professional staff, none of whom own as much as 15% of the stock.

The result of having top-quality people is being able to create top-quality, low-risk, growth equity and fixed-income portfolios.

For example, we offer real estate investments that are an excellent way to diversify your retirement fund portfolio. Choose from a closed-end pooled fund or from separate investments. In either case, the goal is low-risk growth.

We have recently introduced further diversification through investment in international markets. Reduce risk and broaden your opportunity by choosing an international mutual fund, a group trust for pension portfolios, or separate investments.

We also offer separately managed portfolios (similar to the Babson Enterprise Fund) of companies with small market capitalizations. These are companies that fill a niche in their particular industry. Companies in which management holds a large stake.

So if you're looking for sound investments with limited risk for your retirement fund portfolio, consider David L. Babson. Because good performance depends on good planning. And you can't develop a plan without solid investment decisions.

For more information about what we can do for you, call Peter Thompson, President, at (617) 225-3800. Or write: David L. Babson & Company, Inc., One Memorial Drive, Cambridge, MA 02142.

**David L. Babson & Company, Inc.**

*The person you talk to owns the company.*

NASHVILLE, Tenn. — Assets of the Tennessee Consolidated Retirement System increased 14.8% to $6.132 billion as of Sept. 30 from $5.34 billion the previous year. Because of the market turmoil in October, the fund dropped 5.7% to $5.782 billion.

The master custodian is Chase.

Key personnel overseeing the investment management of the fund are Charles A. Webb, chief investment officer, and Marshall Cox, fixed-income manager.

DANBURY, Conn. — Union Carbide Corp.'s defined benefit assets declined 42.3% to $1.663 billion as of Sept. 30 from $2.88 billion the year before. Total asset figures were not available.

The drop was due largely to the purchase of $1.2 million in annuities under a non-participating contract with Prudential Asset Management Co., according to a fund spokesman. Those assets previously had been in a participating annuity contract with Prudential, under which Union Carbide officials maintained management of the assets and the benefit fund received any returns above those needed to cover the annuities.

The pension assets declined 1.9% during October to $1.631 billion as of Oct. 31 from $1.663 billion Sept. 30. The asset mix as of Oct. 31 was stocks 20%; bonds 54%; real estate equity and mortgages combined 10%; and cash 16%.

**Equity managers:** Benefit Capital Management; Boston Co.; and Capital Guardian.

**Fixed-income managers:** Benefit Capital; Boston Co.; and Scudder, Stevens & Clark.

**Real estate manager:** Benefit Capital.

The master trustee is Manufacturers Hanover.

Key personnel overseeing the investment management of the fund are Michael F. Hoben, president of Benefit Capital Management Co., the company's in-house management operation; and Lawrence R. Fuller and Robert Borstein, vice presidents of Benefit Capital.

# Would You Really Trust Your Company's Master Trust To Someone Who Didn't Make It A Top Priority?

You know a Master Trust can save your company time, money and headaches by pooling investments and consolidating administration of your employee benefit funds. But at a lot of trust companies, you risk getting lost in the shuffle instead of getting the attention you need.

The solution? Centerre Trust Company of St. Louis.

We make it a top priority to treat each client as a top priority. No matter how big or small. And this approach works so well, we're a bit surprised our competition hasn't caught on.

A Centerre Master Trust gives you everything you'd expect from a full-service Master Trustee: Comprehensive accounting and reporting, an on-line inquiry system for timely information about your account, a cash management system that generates income from money that might otherwise sit idle, and a securities lending system to boost your return on assets even further.

Get the personal *and* professional service you deserve.

Call Centerre about a Master Trust or Master Custody agreement today at (314) 436-9673. It's the only number we'll ever ask you to take.

OLYMPIA, Wash. — The Washington State Investment Board had $10.6 billion in total assets as of Sept. 30, an increase of 30.9% from $8.1 billion the previous year. Because of a reduction in equity assets to 27% in early September, the board reported only an 8.5% loss from October's volatile stock

# Bond portfolios

*Continued from page 13*

banner year in 1987," Mr. Leibowitz said, although statistics on its growth were not available.

Joseph Gorman, president of National Investment Services of America Inc., Milwaukee, said plan executives' increasingly conservative posture is pushing them toward dedications.

But Ken Meyer, executive vice president of Lincoln Capital Management Co., Chicago, said pension executives largely were thinking through the implications of FASB 87 last year, and soon would make a move toward "structured" bond portfolios, such as dollar-duration matching vehicles, which use smaller amounts of more highly levered bonds to insulate against interest rate risk.

American Airlines, Fort Worth, Texas, adopted such an approach last year, dropping its $1.05 billion dedicated portfolio and buying $850 million in longer duration bonds, allowing the company to lock in its pension surplus and minimizing interest rate risks (*P&I Age*, March 9).

Besides American, at least three major dedicated bond portfolios were dropped during 1987. In one of the biggest moves, Chrysler Corp., Detroit, liquidated its $2.1 billion dedicated bond portfolio, shifting the assets to stocks. Before the October crash, however, Chrysler lowered its commitment to stocks to between 30% and 35% from 55%, boosting cash to 30%, said Russ Flynn, manager-pension fund investments.

In addition, Ford Motor Co., Dearborn, Mich., and Honeywell Inc., Minneapolis, unwound their dedicated portfolios that were valued at $400 million and $308 million respectively as of Sept. 30, 1986. Officials at those firms declined to discuss the portfolio liquidations.

The amount of assets held by Top 200 pension funds invested in dedicated or immunized portfolios actually declined in the year ended Sept. 30, slipping to $24.58 billion from $29.35 billion. But this year's data is skewed because several funds with large dedicated bond funds — such as U S WEST Inc. and Westinghouse Electric Corp. — did not supply data on whether those portfolios still are in place. ■

# Rankings

*Continued from page 13*

Those in the top 10 funds were unchanged, although rankings shifted slightly. The Teachers Insurance and Annuity Association — College Retirement Equities Fund, New York, remained first with $66.2 billion; the California Public Employees' Retirement System, Sacramento, was second with $44 billion; General Motors Corp., New York, was third with $49 billion; and the New York State & Local Retirement Systems, Albany, remained fourth with $38.7 billion.

American Telephone & Telegraph Co., New York, with $37.5 billion, moved ahead of the $33.6 billion New York City Retirement Systems; General Electric Co., Stamford, Conn., $27.3 billion remained seventh; and the California State Teachers' Retirement System, Sacramento, $23.3 billion, just passed the New York State Teachers Retirement System, Albany, $23 billion, to rank eighth. IBM Corp., Stamford, Conn., $22.5 billion, remained 10th.

Significant shifts in overall rankings within the Top 200 include: Public School Teachers' Pension and Retirement Fund of Chicago, $3.2 billion, up 26 places to 83rd; The Dow Chemical Co., Midland, Mich., $2.9 billion, up 22 places to 98th; International Paper Co., New York, $2.5 billion, up 29 places to 123rd; and Abbott Laboratories, $1.7 billion, up 29 places to 163rd.

Bethlehem Steel Corp., Bethlehem, Pa., at $2.7 billion, slid 26 places in the rankings to 109th.

One of its woes was negative cash flow; incoming contributions to the plan were $150 million in 1987 while the amount to be paid to workers was $480 million. In addition, more than $150 million of total assets reflects corporate contributions owed to the plan. Bethlehem also maintains a very conservative asset mix, with half of all assets in dedicated bonds and only 35% in stocks as of Sept. 30.

Halliburton Co., Duncan, Okla., with $2 billion in total assets, moved up 56 places to 141st after incorporating the assets of two small subsidiaries — Houston-based Brown & Root Inc. and Highland Insurance Co. — into a master trust in 1987.

Union Carbide's ranking slipped 86 places to 164th, from $3.2 billion to $1.7 billion in total assets, because the assets of a previously terminated plan, which are still managed by Union Carbide, were not included in this year's profile. ■

REAL ESTATE

# Funds bolster realty

By Steve Hemmerick

The largest 200 employee benefit funds reported holding $28.039 billion in equity real estate for the year ended Sept. 30, up about 7.1% from $26.181 billion reported the previous 12 months.

Most of the increase in equity real estate assets was reported by public pension funds.

Washington State Investment Board registered one of the biggest increases — 50.4% to $340 million from $226 million.

John Hitchman, executive director of the Washington fund, said the increase comes from recent direct investments with "major developers" in office buildings, shopping centers and industrial properties. Some 134 of the largest 200 employee benefit funds have equity real estate portfolios, but 10 didn't list amounts.

**Top 200**

Of the 124 reporting amounts, the average percentage of the total portfolio invested in equity real estate was 4.8%. The portfolios included equity purchases and participating mortgages, but not straight mortgages or mortgage-backed securities.

Of the total, corporate pension funds reported $12.041 billion in equity real estate; public pension funds, $11.769 billion; union funds, $1.332 billion; and miscellaneous funds, $2.897 billion.

The top four funds, with real estate holdings significantly larger than the other pension funds, reported the following increases: American Telephone & Telegraph Co., New York, reported $3.217 billion in equity real estate, a 20.1% increase over $2.678 billion; Teachers Insurance and Annuity Association College Retirement

WRAP-UP

### First allocation made

CHICOPEE, Mass. — The $23 million Chicopee Contributory Retirement System, Chicopee, Mass., made its first real estate investment, allocating $750,000 to a Metropolitan Life Insurance Co., New York, real estate investment contract that guarantees protection of principal and at least a 7.5% annualized rate of return.

The allocation came from cash reserves. No consultant was used.

The fund might invest 5% to 10% of its total assets in real estate in the next several years, although no official allocation target has been set yet, said Norman Ritchott, system supervisor and board member. Any increase in real estate would come from equity investments, which are 35% of the fund's portfolio.

The Met Life contract was a "logical way" to enter real estate because it guarantees a minimum return and provides for greater returns, said Mr. Ritchott. The contract, which calls for investment in a group of pre-selected properties, guarantees investors a minimum return of 7.5% plus 90% of any returns the properties generate of more than 8.5%.

### Consultant hired

JUNEAU, Alaska — The $9 billion Alaska Permanent Fund Corp., Juneau, has hired Institutional Property Consultants Inc.,

*Continued on page 76*

# Second wave coming

**Shuwa Investments Corp. bought the American Broadcasting Cos. building in New York during its first American buying spree, and now is looking to re-enter the U.S. market.**

## Japanese look at new markets

By Steve Hemmerick

Although Japanese investing in U.S. real estate has slowed, a second wave of Japanese purchases is expected to hit interior cities and suburbs where domestic investors have sought refuge from being outbid by the Japanese for properties in large, coastal cities.

Many Japanese investors have pulled back, waiting for stability between the yen and the dollar, evaluating the estimated $6 billion in American properties purchased in 1987 and, perhaps, becoming more price conscious.

But heavy buying is expected again, and this time the American vs. Japanese bidding for properties will accelerate in Chicago; Atlanta; Columbus, Ohio; Seattle; Phoenix; and San Francisco.

Some Japanese investors are waiting for the American dollar to fall to 100 to 110 yen vs. the dollar, said George Kikuta, a partner with Deloitte Haskins & Sells, Los Angeles, who does consulting and accounting work for Japanese firms.

He said the new wave of Japanese investors will include those from successful, non-public, family-run companies in Japan and rich individuals.

The expected broadening of the investment perspective is part of an evolutionary movement, said Robert T. Burke, a principal with AMB Investment Inc., San Francisco, and a consultant to Mitsui Fudosan.

Mr. Burke also noted the Japanese are more sophisticated, more cautious and less inclined to pay high prices.

With the Japanese moving beyond first-tier cities to secondary locations, non-trophy buildings and retail, the result might be lower yields and higher prices for prime real estate in second-tier cities and in suburbs of first-tier cities such as New York, Boston and Los Angeles.

American pensions funds, which Goldman, Sachs & Co. anticipates will invest $100 billion in equity real estate during the next few years, will be bidding for the highest quality real estate that is in short supply.

These American investors say they hope the Japanese will seek the same kinds of returns and drive as hard a bargain as they do.

Because of the dollar-yen impact, said Stephen Rosenthal, a vice president for acquisitions with F.I.A. Associates, Sacramento, Calif., Japanese real estate investors "could come back with a vengeance."

If the dollar begins to rise against the yen during that buying period, Japanese acquisitions could "accelerate," said David Shulman, a director of real estate research with Salomon Brothers Inc., New York.

Rather than buying into a depreciating dollar, which they have done, he said, they will be buying when their American investments rise in value on a currency basis.

When the dollar and yen stabilize, "you are going to see a flood of investment here in America," predicted John Allen, direc-

*Continued on page 76*

# Japanese

*Continued from page 75*

tor of Asian marketing for the real estate services firm Grubb & Ellis, Irvine, Calif.

Blake Eagle, a consultant with Frank Russell Co., Tacoma, Wash., said information from his company's office in Japan indicates the Japanese will be significant long-term investors in U.S. real estate.

Some American institutional investors said they are trying to determine to what extent, if any, Japanese investors have slowed their investing.

As evidence of a slowdown, they point to reports that Shuwa Investments Corp., Los Angeles, had pulled out of negotiations to buy three office buildings in Chicago and one in Boston.

However, Shuwa has showed renewed interest in the real estate market, making the biggest bid for New York real estate since the October market decline.

Shuwa officials signed a letter of intent to acquire 575 Fifth Ave. for about $250 million.

Other Japanese investors reportedly backed off from bidding on the Beverly Hilton Hotel in Beverly Hills, Calif., and there was a perceived slowdown on Japanese investment in properties in New York, in part because of the instability in the securities industry.

"Yes, we are moving more cautiously than before," said an official at Sumitomo Bank and Trust Co. in New York, who gave his name as "Mr. Kumada."

After the currency exchange between the dollar and the yen has stabilized, it is likely Japanese investment "will be more active," he said.

Because of the volatile exchange rate, he said, Sumitomo officials only are discussing, but not acting on, possible U.S. buys, and will purchase mortgages.

He confirmed that Sumitomo is looking at properties in Chicago, San Francisco and Atlanta.

Robert Bannon, an economist with Security Pacific Bank, Los Angeles, who tracks Japanese stock and bond investments, said large Japanese companies or banks can "mechanically" invest in dollars.

Even so, he said, the Japanese at some point have to shift the value of the dollars back into yen and they can either lose or gain value by the currency shift. The "dollar means everything to them," he said.

While there will be new Japanese investors, others that have already invested here will stop, said Grubb & Ellis' Mr. Allen.

He said the Ministry of Finance in Japan has taken a more conservative stance at home on borrowing.

For example, he said, a company might have borrowed up to 75% on property it owns in Japan to invest here.

Because of sharply rising property values in Japan, that company could borrow again on the new value of property it owns for investment here, except for new Japanese pressures against such loans.

When the smaller, first-time investors in U.S. real estate begin investing, they will use Japanese trading companies and banks as intermediaries, said AMB's Mr. Burke.

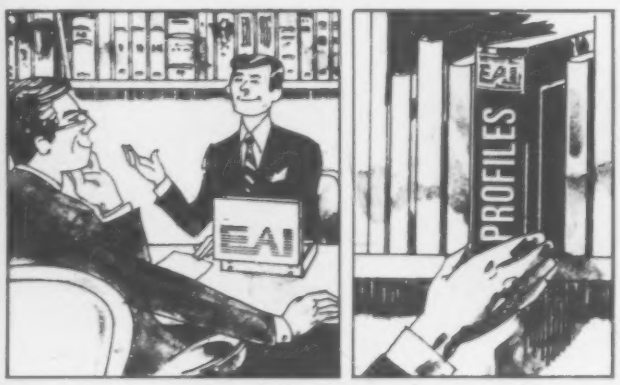
Among the signs that the Japanese are becoming more interested in price: A spokesman in the New York office of Shuwa Investments said his firm can't find high-quality properties at the right price, yet some investors questioned Shuwa's purchase price of $625 million for the Arco Towers in Los Angeles in 1986.

The Shuwa spokesman also said his firm is willing to go "anyplace" in the United States to get an investment at the right price and is looking at properties in Chicago, San Francisco, Dallas and parts of Florida.

An official in the New York office of Nissei Realty said there is little to recommend to the home office in Japan because of high prices.

He said his firm is broadening its outlook, looking at properties in Chicago and Dallas. ■

The Next Best Thing To An EAI Consultant In Your Office...



...Is An EAI PROFILES On Your Shelf.

As a fund sponsor, you need precise, objective information on a large universe of money managers and the complex services they offer. Now the same, reliable information that EAI, leading consultant to fund sponsors, has developed is available to you in five separate PROFILES publications.

So, if you have funds invested in U.S. stocks and bonds, GICs, international capital markets, or real estate, look into PROFILES today and take advantage of the best investment management information available anywhere.

# Realty up

*Continued from page 75*

Equities Fund, New York, up 27.2% to $1.628 billion from $1.28 billion; the California Public Employees' Retirement System, Sacramento, Calif., up 10.7% to $2.241 billion from $2.025 billion; and Ohio Teachers' Retirement System, up 10.7% to $1.588 billion from $1.434 billion.

A key reason behind the ballooning of the AT&T equity real estate portfolio is its purchase of shares of the Telephone Real Estate Equity Trust from some regional telephone companies desiring to sell them.

The trust, originally valued at $4 billion, was established in January 1984 before the divestiture of the regionals from AT&T. Shares of the trust, which is scheduled to be liquidated after 10 years, can be bought or sold among the trust's membership.

Generally, corporate pension funds are not increasing the percentage of assets in equity real estate, said Blake Eagle, consultant at Frank Russell Co., Tacoma, Wash.

He said many of the large corporate pension funds already have real estate assets target goals of 10% to 15%, and were surprised how quickly they neared or reached those goals after the stock market fall Oct. 19.

He noted many pension funds participated in the buyout by JMB Realty, Chicago, of Cadillac Fairview Corp. Ltd., Toronto, and still show an appetite for quality real estate when it is available.

As for public pension funds, they continue to buy sizable amounts of real estate, according to Ronald Karp, president of Ronald A. Karp Associates, Summit, N.J.

He said he didn't notice an appreciable pull back in real estate purchases after the stock market slump, and public funds that have limitations on stock purchases use real estate as a hedge against inflation.

## WRAP-UP

*Continued from page 75*

Atlanta, as real estate investment consultant, replacing Pension Realty Advisors, San Francisco.

It also appointed Pete Jeans as real estate investment officer replacing Richard Alexander, who retired.

The fund's board may increase its real estate allocation target to 10% from its current 6.5% during allocation strategy meetings scheduled for February, Mr. Jeans noted.

He also said the fund's board was pleased with Pension Realty Advisors, but decided it wanted "fresh blood" in consulting when the firm's three-year contract expired.

Mr. Jeans previously served as director of the about $150 million state loan programs administered by the Alaska Department of Commerce.

### *Blind pool withdrawn*

ALEXANDRIA, Va. — Pension fund aversion to "blind pool" real estate investing forced the J.E. Robert Co., Alexandria, Va., to withdraw from the pension fund fund-raising market a closed-end limited partnership, according to Joseph E. Robert, chief financial officer.

The fund, called J.E.R. Partners, was expected to raise up to $200 million in pension fund investments but was withdrawn.

Mr. Robert said it was pulled back after executives of a "handful" of pension funds said they didn't like its blind pool approach.

No pension commitments had been made.

Blind pools select properties to acquire while they are still in or have already finished their fund raising.

Pre-selected property funds let investors know the properties the manager will acquire before investing.

Although there was always been some aversion to blind pool investing, real estate consultants have said that dislike has increased because of greater investor wariness after October's stock market fall.

They also said pension fund executives want to know what's in the real estate portfolios in which they invest.

J.E.R. Partners, which is underwritten by PaineWebber Inc., New York, will now seek investments from private investors, Mr. Robert said.

# Energy ventures boom

**By Fred Williams**

For oil and gas investors among the largest 200 pension funds, the whole was greater than the parts in 1987.

Although individual companies reported only moderate changes in their direct investments in oil and gas programs, total investment by the nation's largest pension funds grew by half.

The total allocation by the 22 funds that reported direct oil and gas investment stood at $1.278 billion as of Sept. 30, an increase of 52.7% from $837 million as of Sept. 30, 1986. But an examination of the 15 funds that appeared on both last year's and this year's lists shows the total value of investments of eight of them decreased while others held steady or increased slightly.

One reason for the decrease could be a change in how the question was worded. The previous survey had asked for assets committed to the investments; this year's survey asked for assets invested.

**Top 200**

Another reason is the market.

Bob Doyle, president of American Energy Reserve Consultants, Houston, said many funds might have taken a writedown in reserve valuations in 1987 reflecting devalued oil and gas properties.

"From 1986 to 1987 you lost a good $1 or $1.20 per thousand cubic feet of gas. In 1985, gas on the Gulf Coast spot market was averaging about $2.50 per (thousand cubic foot). In 1986, it hit a low of about $1.34. My guess is when you get into 1987, they revalued their reserves and came up with a different valuation for their holdings," he said.

Industry sources expect 1988 to be another flat year for energy prices because of soft worldwide demand and uncertainties surrounding the Organization of Petroleum Exporting Countries' pricing strength.

Natural gas prices, on the other hand, are expected to climb through the remainder of 1988 as surplus deliverability shrinks.

The high number of repeat investors on the charts reflect the long-term nature of energy investments.

One newcomer to the list of oil and gas investors is the $10.6 billion Washington State Investment Board, which placed $100 million in a limited partnership in June.

John Hitchman, executive director, said the board invested in the partnership deal developed by Robert Torray, who also is general partner and chairman. Mr. Torray is president and chief investment officer of Robert E. Torray & Co. Inc., an investment management firm in Bethesda, Md.

Called the Energy Recovery Fund, Mr. Hitchman said the focus of the partnership will be on "operating leverage and restructuring rather than on buying oil and gas in the ground." He said the seven-year partnership is expected to provide "superior" returns of between 2 and 2.5 times the returns of the Standard & Poor's 500 stock index.

Leading pension fund investors onto the oil field is the nation's largest fund, the more than $60 billion Teachers Insurance and Annuity Association — College Retirement Equities Fund. Although TIAA-CREF reported an $800 million investment in its survey response, a spokesman said that amount included more traditional fixed-income energy sector holdings. The spokesman estimated $600 million is invested in direct oil and gas programs.

Following TIAA-CREF, is American Telephone & Telegraph Co. AT&T, with an ongoing commitment to oil and gas investments, had been at the top of the list for the past several years, but dropped slightly to $236 million from $247 million a year earlier.

Most of the other companies have reported oil patch investments for several years, with their positions changing only slightly. ■

# Budget law

*Continued from page 2*

companies willing to move into better funding status."

Trade groups representing the auto, steel and telephone industries, public utilities, manufacturers, and pension fund groups lobbied hard on Capitol Hill for the changes, according to congressional aides and trade group officials. Congressional aides heard from the Motor Vehicles Manufacturers Association, ERIC and the National Association of Manufacturers, all Washington-based, among others.

Navistar International Corp., Chicago, and Chrysler Corp., Highland Park, Mich., which are both MVMA members, were among the most vocal corporations. Both faced hard times several years ago when business slumped and, as a result, contributed little or nothing to their pension funds, leaving them underfunded. Recently, they have recovered and are able to resume making contributions or making larger ones. These kinds of companies will benefit most from the new provisions.

"This opens the way for companies with underfunded plans to fully fund their plans without penalty and get the deduction," said Daniel Clemens, director of Navistar's employee pensions.

He said Navistar's unfunded vested liability is about $360 million to $370 million, down from $1.1 billion a few years ago. Mr. Clemens is aiming to eliminate the unfunded liability in three to five years. He said the provisions would go a long way toward helping him accomplish that goal.

Last month, President Reagan signed the Omnibus Budget Reconciliation Law, which contained provisions tightening minimum and maximum funding rules, increasing the annual premium employers must pay to the Pension Benefit Guaranty Corp. and reducing the period over which past service liabilities and experience losses in pension funds can be amortized (*Pensions & Investment Age*, Dec. 28).

The combined effects of the two provisions specifically are targeted to companies with underfunded plans that have been making catch-up contributions so they contribute a large amount in one plan year. Lobbyists for several companies argued on Capitol Hill that if a corporate sponsor is willing to put more into the underfunded plan, Congress should make it easy to do so.

Under prior law, there was a limit to the amount a company could contribute in any given year, after which the contribution no longer would be deductible. But under the new law, a company can contribute up to the unfunded current liability without losing its tax deductions on that amount. Thus, the penalty that existed previously has been eliminated.

"But it still protects taxpayers from subsidizing companies' overfunding their plans because employers lose deductibility for contributions when funding exceeds current liability," Navistar's Mr. Clemens said.

The new variable-rate premium established for the PBGC in the law also is a factor. In general, under the new law a plan sponsor must pay a flat rate of $16 per participant per year, plus an additional $6 for each $1,000 of underfundedness to a $34 cap. That means the total premium could not be more than $50 a head in any given year.

If a company contributed more than the maximum in any plan year during the five years preceding its having to pay the variable premium, the variable portion of the PBGC premium it must pay is reduced to $3 participant. ■

Editorial Index

The figure for the November return of the Russell 3000 in the Dec. 14 issue was incorrect. The number should have been −7.54.

# Top funds

*Continued from page 1*

Following the performance of corporate employee benefit funds were public funds, up 18% to $514.4 billion from $435.9 billion; miscellaneous funds, rising 11.7% to $105 billion from $94 billion; and union funds, increasing 3.6% to $37.3 billion from $36 billion.

Although employer contributions, in the aggregate, declined 0.5% to $40.1 billion, from $40.3 billion, corporate funds accounted for most of the drop.

Benefits paid to retirees during the year totaled $38.2 billion, up 3.5% from $36.9 billion the previous year. A spate of staff reductions and early retirement programs in the corporate community generally slowed the growth of benefit payments.

Among the Top 200 employee benefit funds, defined benefit assets logged the biggest increase in assets, up 18.5% to $984.9 billion as of Sept. 30 from $831.1 billion a year earlier.

Thrift, saving and 401(k) plan assets showed the next largest increase, up 16.4% to $67.6 billion from $58.1 billion, followed by defined contribution plan assets, growing 13% to $104.2 billion from $92.2 billion, and profit-sharing plan assets, up 9.8% to $19.1 billion from $17.4 billion.

For the first time in 1987, *P&I Age* surveyed pension funds on the extent to which they use private placements as an investment. As of Sept. 30, 44 pension funds reported having $19.6 billion invested in private placements.

The number of pension funds among the Top 200 using bond index funds increased to 41 from 32, boosting the total assets invested in such funds 226.1% to $45 billion from $13.8 billion. Of the assets invested in bond index funds, $2.7 billion, or 6%, was managed internally.

The number of pension funds using stock index funds increased to 105 from 100 as of Sept. 30, increasing the total assets invested 29.8% to $141.3 billion from $108.9 billion. Of the $141.3 billion in stock index funds, $63 billion, or 44.6%, was run internally.

As of Sept. 30, 14 fewer pension funds, or a total of 48, were using GICs, decreasing the total assets invested that way 16.2% to $8.8 billion from $10.5 billion.

As of the same date, 10 fewer pension funds among the Top 200 reported using dedicated or immunized bond portfolios, lowering the total assets invested in these portfolios 16.3% to $24.6 billion from $29.4 billion. But several funds with large dedicated bond funds did not supply data on whether those portfolios are still in place (*See story on page 13*).

Among the various hedging strategies, nine more pension funds, or 72, reported using stock index futures during 1987 and three additional pension funds, or 65, used stock options. In contrast, three fewer pension funds reported using fixed-income options during 1987, for a total of 19; 46 funds used fixed-income futures.

Six fewer pension funds, or a total of 13, said they used portfolio insurance during 1987. The total assets covered by this strategy declined 15.1% to $7.3 billion as of Sept. 30, down from $8.6 billion a year earlier. ■

# Venture capital holds on

## Investments keep flowing at steady pace

By Trudy Ring

Venture capital investors among the nation's largest pension funds charted a steady course in 1987, but 1988 might hold some changes.

The amount of assets, $2.91 billion, that the funds reported in venture capital was down 12.7% from 1986, but that appears to be a difference in reporting rather than an actual decrease in assets.

**Top 200**

In 1987, funds were asked specifically for assets invested in venture capital; in 1986, some reported dollars invested but others reported commitments that were not yet funded.

Also, in 1986 some put leveraged buy-out investments in the same category as venture capital.

In addition, several funds that had substantial amounts in venture capital in 1986 declined to provide the information for 1987. Overall, 66 of the Top 200 funds reported venture capital investments in 1987, down from 75 in 1986.

The numbers for both years exclude the General Electric Co. pension fund, Stamford, Conn., which has substantial venture capital investments but groups them with other alternative investments in the *Pensions & Investment Age* survey.

The $37.5 billion American Telephone & Telegraph Co. pension fund, New York, reported the biggest amount in venture capital, $383 million, up from $316 million in 1986.

This increase is just what AT&T had planned, said Tom Judge, division manager in AT&T's investment management organization.

"We go at this in what we perceive to be a prudent fashion, not in a hurry," he said.

AT&T will add to its venture capital investments in 1988 if good opportunities are available, he said.

The $11 billion GTE Corp. pension fund, Stamford, Conn., increased its venture investments substantially, to $182 million from $92 million. This came about as a result of funding previous commitments, said John Carroll, president of GTE Investment Management Corp.

As for venture capital activity in 1988, Mr. Carroll said, "We never say never."

1988 might be a good year for pension funds to be active in venture capital, as good deals might be available at bargain prices. Some funds, however, might shy away because the market for initial public offerings became so tight after the Oct. 19 stock market plunge.

Mr. Judge agreed the IPO market is a negative for venture capital, but the lower prices at which deals likely will be available is a plus.

"I suspect one area that will be put on the back burner is venture capital," said John Hitchman, executive director of the $10.6 billion Washington State Investment Board.

Mr. Hitchman stressed he is speaking about other funds here; the Washington board, whose venture capital investments grew to $210 million in 1987 from $190 million in 1986, will continue seeking deals in that area, as there likely will be good values available. ■

# Market crash

*Continued from page 1*

centage of the stock universe, he concluded, "To do good, asset mix is the key. . . . If a fund was either equally weighted in stocks and bonds or overweighted in bonds, it did pretty good."

Not surprisingly then, funds with the lowest stock allocations — generally public and union funds — lost much less money than the mainly corporate funds that were heavily weighted in stocks:

- The $7.524 billion Western Conference of Teamsters Pension Trust, Seattle, fared the best among the 66 funds surveyed, down 1.3% between Oct. 1-31. The Western Teamsters had only 11.4% in stocks, and 80.1% in the broad fixed-income category (including 55.9% in bonds and 22% in annuities).

Alan D. Biller, the fund's consultant, attributed the Western Teamsters' performance in October to decisions made years ago to set up large dedicated bond portfolios. "They were properly designed so they didn't fall apart in the face of interest-rate declines" and calls," he said.

"Going into this year, we knew stocks were overvalued, but the fund takes a long-term view. So even while we were buying stocks, we maintained a very large real estate position (8.5% of assets) and didn't run down the bond holdings."

In October, as it turned out, "we were lucky," Mr. Biller said.

- The $1.663 billion defined benefit plan at Union Carbide Corp., Danbury, Conn., which lost only 1.9% in October, was the second-best performer among the 66 surveyed and the only corporate fund to rank in the top third. Union Carbide had 28% in stocks, but 72% in fixed income, of which 58% was in bonds.

Carbide's low equity exposure is deliberate: Fund officials decided the amount in equities would be no greater than its pension surplus, with the liabilities covered by fixed income. To protect earlier equity gains, bond durations were extended beginning in August, reaching a maximum of 2½ to three years beyond liabilities by October. (They've since been reduced to about 1½ years.)

"Even though we got hurt, (Carbide's stock loss) was almost entirely offset by the rise in the bond portfolio," said Michael F. Hoben, president of Benefit Capital Management. Corp., Carbide's in-house asset management arm.

- The $12.446 billion North Carolina Retirement Systems, Raleigh, which lost 2.7% in October, had just 23% of its assets in stocks, but 61% in bonds and 15% in mortgage-backed securities.

C. Douglas Chappell, deputy treasurer/director of the state's investing and banking division, attributed his fund's performance solely to its asset mix. Although the equity exposure hasn't moved above its Sept. 30 level of 23%, Mr. Chappell said, "We're not afraid to make some equity commitments."

By contrast, Northrop Corp., Los Angeles, whose defined benefit assets declined 16.7% in value, had 70% of its $2.519 billion in stock.

Similarly, assets of the $2.624 billion defined benefit plan of Pacific Gas and Electric Co., San Francisco, dropped 16.2%; PG&E had 74% of its assets in stocks. ■

# Insurance

*Continued from page 2*

inquiries, but we're not getting new clients" for portfolio insurance, said Gene Brody, director of options management at Oppenheimer Capital Corp., New York. Oppenheimer's portfolio insurance assets declined to $900 million from $1.5 billion.

During the Oct. 19 market crash, most portfolio insurers had trouble executing dynamic hedging, the predominant form of portfolio insurance in which the manager sells futures short to create a synthetic put option to protect the underlying portfolio's value.

Difficulties in the futures markets during the plunge have led some to conclude that a portfolio insurance strategy relying solely on futures is unreliable.

"Under the conditions it was needed most, it didn't work," said Edgar Peters, senior portfolio analyst-structured investment products, The Boston Co. Inc., Boston.

Boston Co. moved most of the $300 million it had under portfolio insurance to different strategies, such as tactical asset allocation.

Mr. Peters is urging clients that want portfolio insurance to use actual put options, rather than a synthetic put strategy, as options' cost and level of protection provided are known up front. Still, the firm suggests this only for short-term hedging, he said.

Others touting the use of actual put options for portfolio insurance are Drexel Burnham Lambert Inc.'s Chicago office, which saw its assets under this strategy grow to $3 billion from $2 billion in the fourth quarter, and Northern Trust Co., Chicago, which saw its assets grow to $250 million from $150 million.

"With the put, you get exactly what you purchased ahead of time," said Brian Bruce, manager-new products and systems at Northern Trust.

Others contend an options-based strategy could be too costly. "If you can buy the long-term puts at a reasonable price — which I don't think you can — it's reasonable," Mr. Brody said. Some managers buy a series of short-term puts to replicate a longer one, while others use long-term options.

Mr. O'Brien, whose firm pioneered dynamic hedging, said options use might give some clients more protection than they need, but could be appropriate for others.

In either a futures or options strategy, the cost of portfolio protection is going to be higher from now on, because of increased stock market volatility, predicted Jeffrey Geller, vice president of BEA Associates Inc., New York. There likely will be greater use of listed options because of their more precise cost, he said.

BEA had $350 million in portfolio insurance as of Dec. 31, down from $1.2 billion three months earlier; most of these clients have gone into other types of hedging strategies offered by BEA, Mr. Geller said.

The futures-based strategy has its defenders. "We still believe it's a viable strategy, although there are some questions in the marketplace there weren't before Oct. 19," said Jim Carder, president of Westridge Capital Management Inc., Los Angeles. Westridge manages about $40 million in the strategy, unchanged from Sept. 30.

"Most of our clients are very, very pleased with the results they're getting," said Pete Thomas, vice president of Skye Investment Advisors Inc., Cupertino, Calif. Like clients of many portfolio insurers, they will miss their target return somewhat, but will be better off than if they were not hedged at all in 1987, he said. Skye's portfolio insurance assets declined to $646 million from $813 million in the fourth quarter; the two clients that left said it was a market-timing decision.

Mr. O'Brien said from Jan. 1 through Oct. 19, the average LOR account returned about five percentage points more than it would have without the hedge. This was three or four percentage points below where the return should have been, but well within expectations given the market's volatility, he said.

Some managers that use futures also have the choice of selling the securities in the underlying portfolio to cut off the downside — a strategy that could become increasingly important. "I view using the underlying assets as an important safety valve," said Jon Jankus, director of investments at Webster Capital Management, New York. Its $80 million in this strategy at year end was the same as at the end of the third quarter.

Aetna Life & Casualty Co., Hartford, Conn., which had $17 billion in futures-based portfolio insurance Sept. 30, had $3 billion Dec. 31, largely in strategies focusing on the cash securities. Clients in the futures-based strategy discontinued their programs at Aetna's urging because of the undependability of the futures markets in October, said Ralph Tate, vice president.

Bankers Trust Co. — Investment Management Group, New York, which had the authority to move in the cash markets in most of its portfolio insurance accounts, met its goals in those accounts even in the October market (*P&I Age*, Nov. 2). Still, some clients discontinued portfolio insurance; Bankers Trust had $1 billion in the strategy at year end, down from $4 billion Sept. 30.

Managers focusing on bond portfolio insurance, such as Lotsoff Capital Management, Chicago, and Aegis Capital Management, New York, said the strategy worked well with a mix of options and futures.

Lotsoff estimated its insured accounts will return 8.5% for 1987 (final figures aren't in yet), while the Shearson Lehman Government/Corporate bond index returned 2.3%.

Thomas Zucosky, president of Aegis, said bond portfolio insurance didn't suffer the same problems in October as its equity counterpart because of the great liquidity in Treasury bond futures and options on those futures. Their volume is even greater than that of S&P 500 stock index futures.

Lotsoff had $121 million in portfolio insurance as of Dec. 31, up from $75 million a quarter earlier; Aegis Capital had $60 million, up from $55 million.

Stephen Bossu, senior vice president of Lotsoff, said equity portfolio insurance managers might have underestimated the cost.

In addition, no one foresaw how portfolio insurance would perform in a rapidly falling stock market. "There may be conditions under which it is more or less implementable and it may be more or less implementable in different vendors' hands," Mr. Grauer said.

Analyzing the rapidly falling market of Oct. 19, the Brady Commission has called portfolio insurance a major factor in the plunge, predictably angering vendors.

It also said a feature of the crash was aggressive stock selling by arbitrageurs and others in anticipation of portfolio insurance trades.

A solution to this kind of "front running" would be allowing portfolio insurers to do "sunshine trades," announcing their intentions in advance, Mr. O'Brien said.

"I think that will permit the market to anticipate these trades and handle them the way they ought to be handled," he said.

"If the whole world knows what a portfolio insurance program is going to do, no one can really front-run it."

# Professional Marketplace

## To place a classified ad call Maryjeanne Morrisroe at (212) 210-0227

### Positions Available

**MARKETING** for young Northern California asset mgmt. firm seeking growth in EB middle market. Semi-quant shop offers entrepreneurial opportunity to right candidate. **P&I Age Classified, Box 680, 220 E. 42nd St., New York, NY 10017.**

### Positions Available

**PORTFOLIO MANAGER:** Major investment advisory firm seeks intermediate and senior portfolio managers with equity and fixed income experience. Send Resume and salary requirements to: **Box 682, Pensions & Investment Age, 220 East 42nd Street, New York, NY 10017.**

**Manager**
**Employee Assets**

BASF Corporation, a worldwide leader in the chemical industry, has a challenging position available for a highly motivated Manager of Employee Assets to assist in the management of investments and related administration for its $800 + million pension portfolio. Position is located at our corporate facility in Parsippany, NJ.

The successful candidate will have a BA/BS in Business, Finance or Accounting (MBA in Finance preferred), prior pension management experience with a Plan Sponsor and a familiarity with PC's and common software systems. A basic knowledge of money, capital and security markets, and principles of financial analysis and pension management techniques is essential.

We offer a competitive salary and benefits package. For immediate consideration, please send your resume with salary requirements to: **BASF Corporation, Box SLM, 8 Campus Drive, Parsippany, NJ 07054.** An Equal Opportunity Employer.

**BASF Corporation**

**BASF**

### Positions Available

**INVESTMENT CONSULTANT:** Small, growing investment consulting firm seeks experienced professional for role in management and all aspects of the company's activities. Growth opportunity with equity potential. Desirable NJ suburb. Respond to: **Box 678 Pensions & Investment, 220 E. 42nd St., New York, NY 10017.**

**LOS ANGELES FIRE & POLICE PENSION SYSTEM** is seeking Consultant Services for an International Equity Manager Search. The consultant selected will have extensive experience in assisting large pension funds and a comprehensive database of active and passive international managers. Firms wishing to be considered should call **(213) 485-4498** to request a questionnaire. Please do not call for an appointment at this time.

### Situation Wanted

**JOB WANTED: QUANT EQUITY MGT** Award-winning CFA, 20 yrs exper, seeks senior job in research or portfolio mgt. Know theory & practice. Comfortable with fundamental analysis, as well as math & computers. Can implement varied investm strategies: value, momentum, earnings forecast revisions, surprise, neglect. Interest in intl. Good with clients. Sales experience. **P&IA Classified, Box 676, Pensions & Investment Age, 220 E. 42nd St., New York, NY 10017.**

# Venture cap

*Continued from page 1*

stocks has come about since the October market plunge. Much of the activity has come from pension funds and money managers that had the companies in their venture capital portfolios when they were still private.

"Who better than venture people understand the needs of some of these companies?" said John C. Baker, vice president of Alan Patricof Associates Inc., a venture capital manager of $500 million, about half from tax-exempt investors. "Venture firms, as a rule, are reasonably good judges of value."

Pension officers apparently agree. The $10.6 billion Washington State Investment Board, Olympia, has modified its venture capital partnership agreements to allow them to buy stocks of companies that were part of the portfolio before they went public, said John Hitchman, executive director. The partnerships made some such purchases in October and November, he said, declining to identify the stocks. Washington has $210 million invested in venture capital partnerships.

The $37.5 billion American Telephone & Telegraph Co. pension fund, New York, is allowing its venture capital manager to buy additional small-cap stocks in a portfolio of the stock distributions AT&T receives from venture partnerships, said Tom Judge, division manager in AT&T's investment management organization.

Manufacturers Hanover Investment Corp., New York, runs the portfolio, which has about $20 million in public securities. Overall, MHIC manages about two-thirds of AT&T's $383 million venture capital investments; AT&T runs the rest in-house.

Allied-Signal executives, experienced at both venture capital and equities management, have bought several small-cap companies lately, Mr. Tokar said. "There are just some wonderful values out there," he said.

When stocks were selling at 30 times earnings, venture investors looked at the public market primarily as an exit, Mr. Baker said. Now, with price-earnings ratios substantially lower, they are starting see it as an entrance.

Also, many small-cap companies are priced low not only in relation to earnings but also in relation to cash flow, making them attractive takeover candidates, he said. Venture capitalists could emerge as "white knights," Mr. Baker said.

Some investors see values available across the board in small-cap companies. "You could take your pick," said Mr. Tokar, who declined to list individual stock picks because there are so many of them.

Others are focusing on individual industries. Mr. Baker favors technology companies: "My sense is the number of opportunities there may pick up."

First Chicago Investment Advisors' First Post-Venture Fund has more investments in technology than in other industries, but the fund is far from being technology only, said Alvin W. Marley, vice president.

The fund, which invests in companies with market capitalizations of $10 million to $100 million, holds such stocks as **Software Publishing Corp.** and **MSI Data Corp.**, both in technology, but also has issues like **Regal-Beloit Corp.**, a machine-tool maker, **Guaranty National Corp.**, an auto insurer, and **Murray Ohio Manufacturing**, a maker of bicycles and lawn mowers.

Launched in December 1986, the fund has drawn $60 million in commitments from tax-exempt investors, indicating acceptance of what Mr. Marley calls "minicap" investing. "I believe it's a conservative alternative to venture capital."

Mr. Baker said Alan Patricof Associates hasn't discussed public market opportunities extensively with its limited partners, but expects them to accept these ventures as part of the evolution of venture capital investing. "It behooves us as fiduciaries to take advantage and look at a wider range of opportunities," he said.

Mr. Baker acknowledged public-market investments usually bring in lower returns than traditional venture capital. "But it's still a superior return with far lower risk," he said.

Most small-cap stocks did not produce good returns in 1987; an index of about 3,000 such issues that Wilshire Associates, Santa Monica, Calif., tracks for First Chicago was down 12.6%, Mr. Marley said. (He noted the First Post-Venture Fund beat that index with a positive return of 2.9%.) The large-cap Standard & Poor's 500 stock index was up 5.2% for the year.

The poor returns for 1987, however, indicate to some investors this is the time to get into small-cap issues.

"The true value buyer is recognizing once again that there is good value in this minicap segment of the marketplace," Mr. Marley said.

Mr. Hitchman added, "Once this market emerges from its bear posture, I think the smaller-cap stocks will emerge as the great performers they did in '75." ■

# Funds keep global perspective

**By Marlene Givant**

**Top 200**

International investments of the Top 200 pension funds increased 30.4% in the year ended Sept. 30, with several funds dramatically changing their exposure to the area.

International assets totaled $31.896 billion in the 1987 survey vs. $24.465 billion the previous year.

In many cases, the size of the funds' investments abroad was either sheared or doubled in the period between Sept. 30, 1986, and Sept. 30, 1987.

Of the funds that joined the list in 1987, several — including the $6.182 billion Arizona State Retirement System, Phoenix, and the $3.311 billion Kansas Public Employees' Retirement System, Topeka — made their first commitments to international during the period. In other cases, funds had been investing internationally but hadn't ranked among the Top 200. Examples include the $1.305 billion Army and Air Force Exchange Service, Dallas, with $142 million invested internationally, and the $1.377 billion Merck & Co. Inc. plan, Rahway, N.J., with $91 million in international assets.

Many of the 18 funds that dropped off the list since last year still invest overseas but did not meet the Top 200 cutoff in terms of total fund assets. One example is FMC Corp., Chicago, with $65 million in international assets.

A few funds on the list have international exposure only through the investments of a domestic manager. And international assets of several funds were not included because the companies did not supply information.

Because of the 45.5% rise in the Morgan Stanley Capital International Europe Australia Far East index during the period, a fund with the same exposure or even a 25% higher exposure than the previous year's probably lowered its international allocation in 1987. Often, funds did so to return to target allocations.

"We have been taking profits in that sector (international equities) all year long. We would not expect to reduce that allocation any further and an increase is not in the foreseeable future," said Jay Burden, manager-fixed income investments of the $4.1 billion pension fund of Allied-Signal Co., Morristown, N.J. He added, however, the fund is considering investing in international bonds.

International assets of 12 funds — the $3.189 billion City & County of San Francisco Employees; $6.132 billion Tennessee Consolidated Retirement System, Nashville; $4.423 billion Caterpillar Inc., Peoria, Ill.; $3.536 billion Illinois Municipal Retirement Fund, Chicago; $2.676 billion General Foods Corp., White Plains, N.Y.; $2.06 billion Southern California Edison Co., Rosemead; $11.228 billion University of California, Berkeley; $2.948 billion Detroit Retirement Systems; $1.611 billion American Stores Co., Salt Lake City; $15.632 billion State of Wisconsin Investment Board, Madison; $1.946 billion Standard Oil Co., Cleveland; and $3.56 billion Pacific Gas & Electric Co., San Francisco — increased more than 100% during the 12 months while assets of 14 funds were level or decreased.

Assets invested in international fixed income increased 5.5% to $4.529 billion from $4.294 billion the previous year. The vast majority of bond investors also had international equities.

Funds dropped out of the list for various reasons. The $13.7 billion Florida State Board of Administration, Tallahassee, which had a small exposure to international through a domestic manager in 1986, had no international exposure as of Sept. 30. But the fund soon will fund the two international managers it appointed in February 1986.

Florida has decided to fund Nomura Capital Management, and J.P. Morgan Investment Inc., both of New York, contingent on the results of an internal analysis of risk, asset allocation and other considerations, said Cliff Hinkle, executive director. ■

# Leaseback innovation put to work

## Deal limits key pacts

By Brad Rudin

Long-term financing for a paper factory jointly sponsored by Minnesota Power, Duluth, and Pentair Inc., St. Paul, Minn., was completed early this month using an innovative sale and leaseback.

The $380 million leveraged lease was arranged by First Boston Corp., New York. Richard A. Sun, a vice president in First Boston's private finance unit, said investors' sole recourse once the project is complete (probably by the end of the year) is through cash deficiency and keepwell agreements that are limited to about 50% of the project's cost. These agreements provide financial support for the investors if cash flow from the enterprise is insufficient to service the debt.

**Investors in Lake Superior "saw that the project had a high probability of being very successful."**
**—Richard Sun First Boston**

In addition, there are no long-term sales contracts for Lake Superior Paper Industries, Duluth, the joint venture sponsored by Minnesota Power and Pentair. Long-term contracts, favored by investors because they guarantee cash flow from the enterprise, are typically a feature of co-generation projects.

"This is the first project we think that was done with a limited (cash deficiency agreement) and no long-term formula price guaranteed contract," Mr. Sun said.

Equity for the project, which started limited operations late last year, was provided by subsidiaries of Public Service Electric & Gas Co., Newark, N.J.; NYNEX Corp., New York; Southern California Edison Co., Rosemead; Dana Corp., Toledo, Ohio; and Southern Indiana Gas and Electric Co., Evansville.

Debt investors are Prudential Insurance Co. of America, Newark, N.J.; Northwestern Mutual Life Insurance Co., Milwaukee; John Hancock Mutual Life Insurance Co., Boston; and the Wisconsin State Board of Investment, Madison.

Lake Superior obtained favorable financing terms on the 25-year lease because "investors saw that the project had a high probability of being very successful," Mr. Sun said. The Lake Superior Paper Industries plant produces supercalendered paper, a semi-glossy paper used in catalogs, newspaper supplements, magazine inserts and other commercial printing products.

**Lake Superior Paper Industries, Duluth, a joint venture sponsored by Minnesota Power and Pentair Inc., is being financed using an innovative sale and leaseback arranged by First Boston Corp. that features a limited cash deficiency agreement and no long-term formula price guaranteed contract.**

Proceeds from the sale of the plant will pay off bank debt and other costs related to the joint venture, according to an 8-K report filed by Pentair. The project, first announced in late 1985, initially was financed with a $360 million revolving credit-term loan agreement with 14 banks.

Pentair, which owns a 50% interest in Lake Superior Paper, produces paper, power tools, machinery, industrial lubrication, pumps and other products. Minnesota Power operates an electrical power generation system as well as units that provide telephone service, natural gas and water and wastewater treatment.

Equity investors provided 29% and lenders, 71%, of the project's long-term capital, Mr. Sun said.

In a sale and leaseback, equity investors buy equipment from the project sponsor and lease it back. The incentive typically comes from tax advantages for equity investors, which are passed along to the equipment user in the form of lower rental rates.

Five-year depreciation and the investment tax credit are available to Lake Superior under transition rules that apply to the Tax Reform Act of 1986, Mr. Sun said.

Tax considerations did not play a primary role in the deal, though. Instead, Mr. Sun said, the sponsors needed long-term fixed-rate financing, flexible lease renewal and purchase provisions.

The option to purchase is available at certain points during the lease term and at the end of the 25-year agreement, while renewal options are also available at the end of the lease term. ■

# LBO power

*Continued from page 3*

ment to leveraged buy-outs the $10.6 billion Washington State Investment Board, Olympia, Wash., made to KKR in 1987. Washington is the largest pension investor in buy-outs; its total commitment is about $1 billion.

David Weig, deputy director, said none of the $430 million has been invested yet; that will take several years to complete.

Tom Judge, division manager-investment management operations for the $37.5 billion American Telephone & Telegraph Co. pension fund, New York, said AT&T had $200 million in buy-outs in 1987, compared with $82 million a year earlier, an increase of 145%.

Among the funds that reported decreases in the book value of their leveraged buy-out investments as of Sept. 30:

- The $8.8 billion Oregon Public Employes Retirement System, Salem, down 34.5%, to $262 million from $400 million;
- Wisconsin State Board of Investment Board, Madison, Wis., down 28% to $144 million from $200 million;
- GTE Corp., Stamford, Conn., down 30% to $126 million from $180 million;
- The $2.2 billion Massachusetts Pension Reserves Investment Trust Fund, down 28%, to $36 million from $50 million;
- The $66.17 billion Teachers' Insurance and Annuity Association, New York, down 25% to $600 million from $800 million.

John Carroll, president of GTE Investment Corp., the pension investment unit of the GTE fund, said levels dropped because "several of our earlier funds paid out substantial assets" during 1987 and the payouts outweighed any new investments.

Soaring stock prices and increasing competition from new buy-out investors that boosted bidding prices out of range caused some funds to be net liquidators. Market conditions also were ripe to take leveraged buy-out companies public or to sell them to other private investors, causing those earlier investments to be liquidated.

Pension executives at Oregon, Wisconsin and GTE attributed lower leveraged buy-out levels to liquidation, not lack of interest.

In fact, Oregon and Wisconsin raised their commitments considerably during 1987.

James C. George, investment manager at Oregon, said commitments to the KKR fund rose $600 million during 1987; $100 million in funds were rolled over from 1986 and reinvested.

Marshall Burkes, executive director of the Wisconsin fund, said commitments rose "considerably" in 1987 to $540 million; he declined to say by how much.

Others reporting lower investments in leveraged buy-outs were: the $3.1 billion Delta Air Lines Inc. fund, Atlanta, to $50 million from $65 million; the $2.9 billion Textron Inc. fund, Providence, R.I., to $50 million from $70 million; the $3.8 billion Iowa Public Employees Retirement System, Des Moines, to $49 million from $75 million; the $6.8 billion Allied-Signal Inc. fund, Morristown, N.J., to $30 million from $45 million; and the $3 billion Illinois State Board of Investment, Chicago, to $15 million from $40 million.

Those that did not commit to buy-outs in 1987 are sharing the optimism of those that did; several pension funds executives said they might reinvest profits from leveraged buy-out investments when deals materialize.

That list includes TIAA, where J. Daniel Lee, vice president of investments, said the stock market correction is one reason to finance new buy-outs. During the past two years, he said, the fund — a direct investor in buy-outs — was reluctant to make bids.

The $27.3 billion General Electric Co. pension fund is also a direct investor and, like TIAA, saw 1987 as a good year to reap the rewards of previous investments or to refinance its positions while interest rates were low, said Robert Morris, senior vice president, General Electric Investment Corp., Stamford, Conn..

Mr. Morris said the fund is ready to invest in new opportunities and already has bid on a new deal in January. ■

# Name, owners change

RICHMOND, Va. — Continental Investment Advisors Ltd. has changed its name to Richmond Capital Management.

The name change reflects the sale of the firm to its principals.

It had been part of Tae Continental Group of insurance and financial services companies owned by Combined International Corp., Chicago.

Continental Investment Advisors' principals agreed late in 1986 to buy the firm (*Pensions & Investment Age*, Oct. 27, 1986) and completed the purchase April 1. The name change was effective Jan. 1.

"While we were with The Continental Group, we were a wholly owned subsidiary and our name and affiliation were synonymous," said Charles E. Keller, president.

"However, since we are no longer a part of Continental, we feel our own identity should be established in the marketplace," Mr. Keller added.

Richmond Capital Management, a fixed-income specialist, manages $900 million, of which $540 million is tax exempt, for 30 clients in 14 states.

Clients include corporate and public pension funds, foundations, endowments and corporate cash accounts. ■

# Reform wrangling leaves sour aftertaste

By Nicky Robertshaw

WASHINGTON — More than a month after the Pension Protection Act of 1987 became law, bad blood still remains among key players on Capitol Hill and in the Reagan administration.

"If David Walker wants anything from us, we'll suggest that he go and see the tax committees," said a key congressional labor committee aide last week, referring to the assistant secretary of labor.

Such sniping, although bitter, could simply be the latest round of fighting among groups that, eventually, will have to do business with each other. More troublesome, however, is the possibility that the sniping will affect the way in which pension-related issues are handled this legislative session.

**News analysis**

The problem stems from long-standing jurisdictional tugs-of-war over the pension legislation between the tax committees — the House Ways and Means Committee and Senate Finance Committee — and the labor committees — the House Education and Labor Committee and the

# Equity market exodus

## $10 billion cut could be legacy of crash

By Joel Chernoff

NEW YORK — The nation's 1,000 largest pension funds might have reduced their long-term commitment to the stock market by as much as $10 billion in the wake of the Oct. 19 crash, a *Pensions & Investment Age* survey shows.

Other funds are considering reducing their equity commitments, according to the survey, suggesting even more assets might be taken from the market.

And Robert Arnott, vice president and strategist at Salomon Brothers Inc., New York, projects pension funds will pull more than $120 billion out of active equity portfolios during the next two years.

Largely based on discussions with pension executives, Mr. Arnott said pension funds will withdraw $60 billion in 1988 and $60 billion in 1989, and these figures could be much higher. At minimum, this translates into a shift of more than 20% of private and public funds' roughly $560 billion in actively managed equity assets.

Mr. Arnott, however, said the effect on the stock market is hard to determine because pension flow is only one of many factors. Renewed buying by individuals and foreign investors, and continued corporate purchases of their own stock could more than offset the pension withdrawals, he said.

The projected shift could have devastating effects on active equity managers, whose median returns have underperformed the Standard & Poor's 500 stock index since the beginning of 1983.

Indexation of stocks has soared to 25% of pension equity allocations from 9% in late 1982. Meanwhile, fee pressure on active managers is getting increasingly intense (*P&I Age*, Jan. 25).

Several pension experts said the $60 billion-per-year figure is too high, but most agreed trends will be against active management and there will be a move into fixed income and other asset classes.

*P&I Age*'s survey, which went to 600 of the nation's 1,000 largest pension funds, found 7.5% of the 173 respondents had made significant shifts in their long-term asset mixes in the wake of the crash.

On average, these funds had reduced their long-term equity commitments by eight percentage points, which, if applied to the entire 1,000 largest funds universe, would take $10.4 billion out of the equity market permanently.

In addition, another 10% of the respondents were considering changing their long-term asset allocations to reduce their equity exposure.

The impact of such reductions could fall hardest on active equity managers. "Active managers just can't be cavalier anymore," said David L. Eager, managing partner of D.L. Eager Associates, Louisville, Ky.

Mr. Arnott said the shift out of active equity management reflects four trends. He expects the first

**The Pension Benefit Guaranty Corp. and LTV are back in court as the agency seeks a summary judgment forcing the company to take back three terminated plans.**

# Agency renews court battle over LTV termination

By Fred Williams

NEW YORK — In a sharply worded 110-page motion, the Pension Benefit Guaranty Corp. petitioned U.S. District Court for a summary judgment ordering The LTV Corp. to restore the company's terminated steel-division pension plans.

Dallas-based LTV has not recognized a September order by the PBGC restoring the three defined benefit plans to the company. The plans were involuntarily terminated by the PBGC in January 1987 because they were severely underfunded.

The motion, filed Jan. 29 in U.S. District Court for the Southern District of New York, said LTV should be required to resume responsibility for the plans as of their pretermination status Jan. 13, 1987.

The PBGC said restoration is appropriate because: LTV's financial condition has improved substantially since the plans were terminated; it has abused the pension plan insurance program by establishing plans that essentially continued the terminated plans, and; it has demonstrated a willingness to fund retirement programs at levels comparable to those before termination.

The motion cites a financial analysis

## LATE NEWS

### Mineworkers' pact offers 401(k)

WASHINGTON — Members of the United Mine Workers of America will be able to participate in what is believed to be the first nationwide multiemployer 401(k) plan under their new contract.

The UMWA and the Bituminous Coal Operators Association reached tentative agreement on the pact Jan. 30. Union members were scheduled to vote on it Feb. 8; ratification is expected.

Under the plan, to be set up within 90 days of ratification, UMWA members will be able to contribute up to 10% of their pretax wages. They will be able to choose among four investment options. Fund trustees are to select two of the options from a list prepared by the union and two from a list submitted by the employers' association.

Between 65,000 and 70,000 UMWA members will be eligible to participate in the 401(k).

### University wins divestiture appeal

LANSING, Mich. — The Michigan Court of Appeals has ruled unconstitutional a 1982 state law forcing public colleges and universities to divest themselves of South Africa-related stocks.

The appeals court overturned a 1985 ruling by the Ingham County Circuit Court, Lansing, that upheld the law in a suit brought by the University of Michigan, Ann Arbor.

Norman Herbert, investment officer at the university, said the ruling "upholds the regents' control of financial affairs." The circuit court had ruled university regents' autonomy covered only educational, not financial, matters.

Mr. Herbert noted the university's endowment fund, now at $250 million, has divested all but $140,000 worth of stocks in companies doing business in South Africa; it held $52 million in such stocks in 1982. University officials' objection was not to divestiture as such, but to the state's intrusion into the regents' authority.

The law applied only to public colleges and universities; Michigan has no divestiture law for state pension funds.

### NYNEX fund gets new chief

NEW YORK — Richard Wolf, who managed subsidiary cash operations at NYNEX Corp., has been appointed investment director for the company's $14.3 billion pension fund, replacing Robert A. Wysocki, who has become NYNEX's director of investor relations.

Also at NYNEX, William Coughlin, who was an investment director managing the in-house assets for NYNEX, has joined Dreman Value Management, New York, as vice president-money management, his office confirmed. Mr. Coughlin was out of town and could not be reached for comment.

### 404(c) hearings to get under way

WASHINGTON — The Department of Labor begins two days of hearings this week on its proposed regulation spelling out what sponsors of participant-directed individual accounts must do to avoid fiduciary liability for the accounts.

The proposal, affecting Section 404(c) of the Employee Retirement Income Security Act, has drawn at least 226 comment letters from a broad range of corporate sponsors, trade groups, investment companies, insurance companies and other interested parties since it was issued in September (*Pensions & Investment Age*, Sept. 21). Representatives of at least 25 groups will testify at the hearings.

The comment letters raise concerns that the "broad range" of investment choices and other requirements in the proposal would be costly and troublesome to implement, and that guaranteed interest contracts should be allowed as the "safe" investment option required under the regulation.

### 1988 benefit levels established

WASHINGTON — The maximum annual benefit that can be be funded through a qualified defined benefit plan will be

## Manager questionnaires now out

Questionnaires for *Pensions & Investment Age*'s annual issue profiling the nation's institutional money managers are in the mail. For your firm to be profiled in the May 23 directory, please return the questionnaire by Feb. 26 to Christine Philip, directory coordinator, *Pensions & Investment Age*, 740 N. Rush St., Chicago, Ill. 60611-2590.

If you have any questions, or have not received a questionnaire by Feb. 15, please contact Ms. Philip at (312) 649-5217.

# Researchers tip managers to winners

By Jacqueline Dutton and Fred Williams

Outside research resulted in some of the best stock tips and strategic moves of 1987, money managers said.

Here's a sampling of some of the best advice outside research firms provided last year.

Richard Morrison, a principal of Jurika & Voyles, Oakland, Calif., credits two Stifel Nicolaus & Co. Inc. researchers for some invaluable strategic advice last summer.

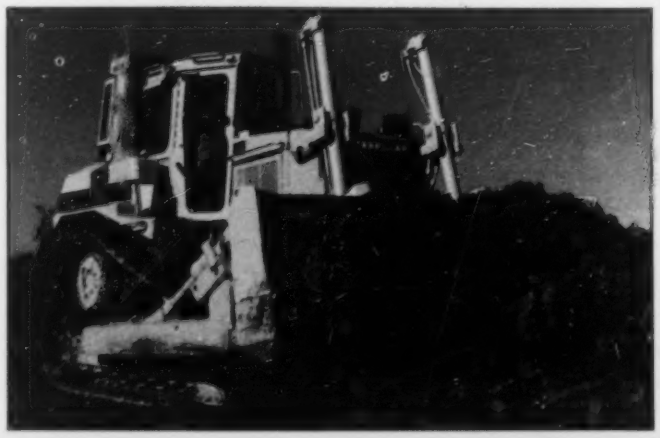
Mr. Morrison said Duane Arnold and W. Clay Allen "really alerted us to the fact that we would have a major drop in the market in October — not to the extent we had — but to some degree," Mr. Morrison said. "So we cut back fairly substantially in equities and that kept us from getting completely clobbered."

He said the firm's balanced accounts were 85% in stocks before the warning, and were cut to 60% stocks heading into the October stock market crash, with plans to go down to 50%.

Mr. Morrison also said some credit should go to Goldman, Sachs & Co. drug industry analysts Frederic Greenberg and David Musket, who were instrumental in giving Jurika & Voyles advice on some of its best performers during 1987: **Syntex Corp.**, which was bought at 27 in

*Continued on page 30*

**Caterpillar Inc. was a big stock hit for Investors Asset Management in 1987, and Richard C. Erwin of the firm credits Merrill Lynch analyst Alexander Blanton with turning him on to the winner.**



# New 'news wars' entry

BOSTON — Richard Chimberg is trying to bite the hand that used to feed him.

Mr. Chimberg has launched a weekly newsletter, Investment Management Weekly, to compete with Institutional Investor Inc.'s biweekly Money Management Letter. Both provide tips on investment managers hired by pension funds as well as which funds are screening managers.

Mr. Chimberg worked for Money Management Letter for about 1½ years. He left in August 1985 to work in public relations for two consulting firms and, later, to do free-lance writing.

By offering his newsletter at twice the frequency for lower cost ($595 annually vs. $1,275 for Money Management Letter) he is taking direct aim at his former employer.

"I've long thought there was a need for a weekly publication to cover this business," Mr. Chimberg said.

While acknowledging the competition with Money Management Letter, he doesn't anticipate the advent of "newsletter wars."

Tom Lamont, editor of the newsletter division at Institutional Investor, New York, said he isn't worried. "I'm not concerned we're going to suffer any erosion" of subscribers, he said, adding there were no immediate plans to change the publication's frequency.

# Business decisions hurt Salomon rating

By Brad Rudin

NEW YORK — Salomon Inc., which recently received lower credit ratings from the two major agencies, is at a junction at which management decisions could affect the firm's creditworthiness for years.

Salomon's problems mirror, to varying degrees, pressures felt by other Wall Street firms.

The giant securities firm has tried to pare costs by dismissing 800 employees, abandoning plans for a huge office tower in midtown Manhattan and scrapping unprofitable units.

Although these measures should bolster credit quality, the firm's move into merchant banking pushes its risk profile in the opposite direction.

Moody's Investors Service, New York, last month downgraded Salomon's senior long-term debt to A 1 from Aa 3. "Various alterations in the firm's capital structure, as well as recent adverse operating results, have diminished risk-adjusted capital and debtholder protection," the rating agency said.

In December, Standard & Poor's Corp., New York, reduced the firm's senior debt rating to A+ from AA−. "The downgrade reflects weaker operating performance due to the cost of the firm's aggressive business and overseas expansion, volatile trading results and increasing competition for its principal institutional businesses," Standard & Poor's said.

Salomon declined comment on the rating changes.

Photo by Arnie Adler

**Salomon, based at 1 New York Plaza, is facing increased pressure on its credit quality.**

The recent downgrades will have little immediate impact on Salomon, said Michael W. Blumstein, the brokerage industry analyst at First Boston Corp. "I don't get the impression they are about to sell huge quantities of long-term debt," he said, adding the firm's commercial paper rating has remained unchanged.

John Jerome Kriz III, a senior analyst at Moody's, attached more importance to the rating change. "Securities firms are very sensitive to their credit standing," he said. "A strong Moody's credit standing can support a securities firm's profitability as well as its ability to (pursue) certain types of business." Interest expense, which is a function of credit rating, is typically an investment bank's biggest cost.

Salomon's role as an intermediary in the swap market is a business that could be affected by its rating, Mr. Kriz said.

Although neither Moody's nor Standard & Poor's changed Salomon's commercial paper rating, the cost of short-term capital could be raised because of the changes in the long-term debt rating, Mr. Kriz said, noting variations in spreads exist within

# Financing volume climbs

## 'Esoteric' instruments perk up deals

By Brad Rudin

Stock and debt financing volume moved up sharply in January as the financial markets pushed ahead with their post-Oct. 19 recovery on the strength of good economic news.

Investment bankers spiced up the expanded volume of deals with some new, modified or revived esoteric instruments.

Stability in the stock market led to common equity volume of $970.1 million in January, 34.6% higher than the $720.8 million recorded in December, according to data provided by IDD Information Services Inc., New York.

Among the largest common stock deals issued, and their underwriters, were:

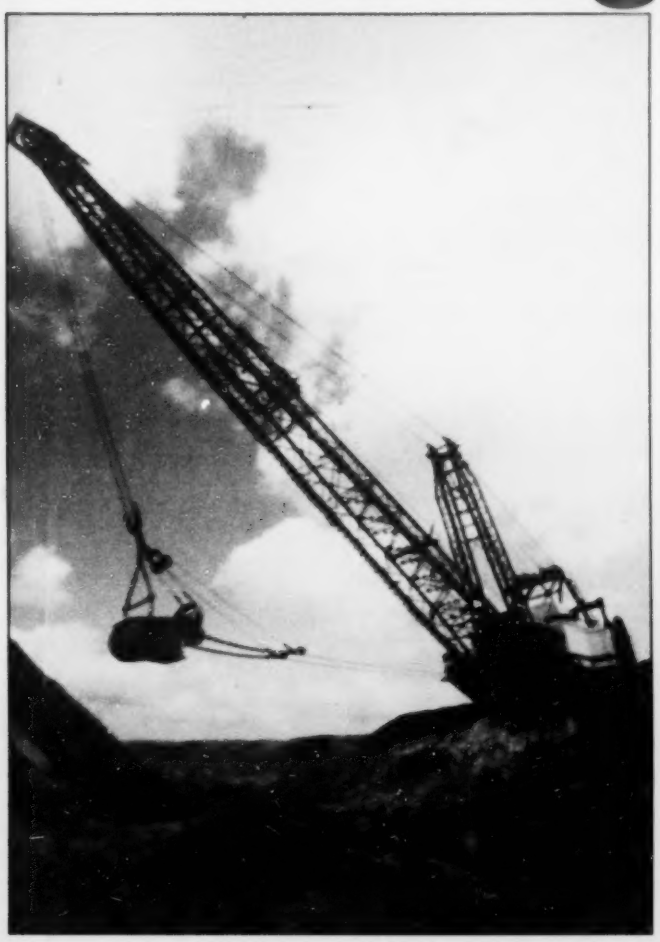
- IMC Fertilizer Group — $220 million — Merrill Lynch Capital Markets.
- Charter One Financial — $34.4 million — Merrill Lynch.
- Allwaste Inc. — $20.6 million — Alex. Brown & Sons Inc.
- Ivax Corp. — $13.1 million — Dean Witter Capital Markets.

Issuers did the bulk of their debt financing in the second half of January, after good news about the November trade figures sparked a rally in the bond market. Large non-mortgage-related debt issues sold in January include:

- BVPS Funding Corp. — $646 million collateralized lease bonds 9.9% and 11% due 1999 and 2017 — First Boston Corp.
- Columbia Pictures Entertainment Inc. — $575 million senior subordinated debentures and notes 10⅝% and 9⅞% due 1998 and 2018 — Allen & Co.
- Mobil Oil Canada Ltd. — $500 million 8⅜% notes due 1993 — Merrill Lynch.

Corporate borrowers paid an average yield to maturity of 9.4%

*Continued on page 32*



IMC Fertilizer Group was one of the corporations whose common stock issues helped boost financing volume last month. Its $220 million issue was underwritten by Merrill Lynch Capital Markets.

**January was a rousing month for investment bankers and the investors they seek to pump money into client coffers. Among the issues was a high-yield debt offering for $125 million in 10-year notes for Manor Care Inc., below, underwritten by Drexel Burnham Lambert Inc., and the $13.1 million common stock offering for Ivax Corp., right, underwritten by Dean Witter Capital Markets.**

# N.Y. sets unusual property strategy

By John Covaleski

ALBANY, N.Y. — The $35 billion New York State & Local Retirement Systems is allocating up to $1.4 billion to implement an unusual direct investment strategy of hiring only one manager per property type.

The fund is signing a contract with Richard Ellis Inc., New York, to invest in office and retail properties, and is in negotiations with TCW Realty Advisors, Los Angeles, to invest in industrial properties. Although no amounts were given, Ellis could get most of the money because the fund's portfolio is to be invested 50% in office, 25% in retail and 25% in industrial.

Pension funds hire managers that specialize in one property type, but they usually hire more than one manager in each category.

"We believe it is the best approach," said Robert J. Steves, the fund's assistant deputy comptroller for real estate investments.

"We'll hire managers based on their property-type expertise and keep them focused to avoid an overlap and inefficiencies. We want to invest in real estate; we don't want to be traffic cops."

Mr. Steves said it's possible the state fund eventually will hire more than one manager for each property type. "We may decide we want further diversification," he said. "We're not wedded to the idea."

Jake Young, senior manager of Roulac Real Estate Consulting Group, San Fran-

# More issuers turn to private market

By Marcia Parker

The private placement market, once a "sleepy adjunct" to the public market and dominated by lower credit-quality issuers and highly complex debt deals packed with pages of ironclad covenants, is coming of age.

Some investment bankers are predicting issuers' cost of capital will come down as a result.

Now more issuers of varying sizes and credit quality are tapping the market, which has grown to more than $1.2 trillion in 1986 from $24 billion six years ago.

Some are entering for the first time, spurred by the closed window for equity offerings following Black Monday. Others are turning to the private market because they are discovering it offers more than traditional straight debt financing and that some of the onerous traits associated with private placements, such as extremely tough covenants, are gone.

A host of new products — including straight equity deals — are being fashioned by private market professionals to compete head on with what's available in the public market. And covenants are being loosened to mirror the public market.

The efforts are paying off in part because, historically, buyers of private market products — insurance companies and, increasingly, corporate and public pension funds — have increased their risk tolerance in the hope of boosting returns. That, in turn, has spurred them to seek investment vehicles that can generate those hefty returns — many of which are offered in the private market. And relatively new players, such as cash-rich Japanese institutions, are hungry for those same high-yielding investments.

"In the '60s right through the '70s and the early '80s, the private placement market was a sleepy adjunct to the public market," Jerome Greene, managing director, Merrill Lynch Capital Markets, told a conference on private placements in January that attracted more than 250 participants.

"We've witnessed the most profound change in the private placement market in the past five or six years. We've seen a whole new role for the private market professional. We've seen the development of an array of private placement products that make it almost essential for any issuer to take a look at the private placement market before attempting any financing," Mr. Greene said.

He said companies looking for money have a lot more sources of capital and structures for that capital than ever before.

"It means that a lot more institutions are competing for (an issuer's) business and that its cost of capital will be lowered as a result. It also means that the financial staff of the company has got to explore as many of these alternatives as possible to get the best deal," Mr. Greene said.

Avon Corp., New York, hasn't done any private placements, but is considering "an international private placement transaction," said John Donaldson, vice president and treasurer. Avon would tap the market "for corporate financing, not as a pension fund investment."

"We've always looked at it as an alternative financing source, but in the past we've found it was not competitive with the public market," Mr. Donaldson said, adding the enhanced access of many public companies to the public credit market has

# Basics still hold appeal

Indexers and quantitative managers scored well in attracting domestic equity business during 1987, but there was room for fundamental approaches as well.

Among managers with more than $1 billion in total assets, the top four gainers and six of the top 10 have most or all of their equity assets in index funds. Among those with between $250 million and $1 billion in total assets, the second-highest gainer is an indexer. Managers were asked to report business gained between Jan. 1 and Dec. 1 of 1987.

For the fourth consecutive year, Wells Fargo Investment Advisors, San Francisco, reported the most new equity business among large managers. It gained nearly $7.2 billion, all indexed.

Bankers Trust Co. — Investment Management Group, New York, was second with $4.8 billion, of which $2.5 billion was indexed; Alliance Capital Management Corp., New York, was third with $1.9 billion, of which $1.3 billion was indexed; and Mellon Capital Management Corp., New York, was fourth with $1.8 billion, all indexed.

Others with large portions of indexed assets among their new domestic equity business were State Street Bank and Trust Co., Boston, with $725 million indexed among its $860 million in new equity business, and American National Bank and Trust Co. of Chicago, with $600 million indexed among its $700 million in new business. Two others, Prudential Asset Management Group, Newark, N.J., and The Boston Co. Inc., Boston, had smaller portions indexed.

Indexing has grown partly because the majority of active equity managers have underperformed major market indexes. But, pension fund executives still hold a place for active managers with strong

*Continued on page 31*

# Indexing top draw

## Interest in real estate, GICs rides high

By Trudy Ring

Passive management was the major theme of tax-exempt fund investing during 1987.

About half the money placed by pension funds and other tax-exempt institutions in equity accounts and a third of the dollars in fixed-income accounts went to index funds during 1987, continuing the trend toward passive core management.

Real estate, guaranteed investment contracts and international/global investing continued to grow in favor with pension funds, while portfolio insurance business was down significantly from 1986.

A total of 266 money managers responded to *Pensions & Investment Age*'s Scorecard survey. They reported net growth of $107.5 billion in tax-exempt assets under management in the 11 months ended Dec. 1. This figure takes into account contributions from new and existing clients, client withdrawals and return on investment.

A year ago, 259 managers reported a net gain of $179.7 billion in assets under management during 1986.

For 1987, participating managers reported $74.2 billion in contributions from new clients; $55.8 billion in additional contributions from existing clients; and $2 billion in market appreciation, dividends and interest. The sum of these is greater than the $107.5 billion because of client withdrawals.

Also, the net growth for several managers was less than the sum of their new business in various asset classes because of client withdrawals and also because of market factors, particularly the October stock market plunge.

For instance, Wells Fargo Investment Advisors, San Francisco, was the top gainer of equity business for the fourth consecutive year and was second in new fixed-income business, but because of market losses showed a net decrease of $5.4 billion in assets under management.

Still, Wells Fargo's showing in attracting business indicates the continuing popularity of index funds. The firm only offers passive management capabilities.

The managers surveyed reported $17.5 billion of their new business was for stock index funds, but they were not asked to break this out between domestic and international. Most of this was domestic, as international stock index funds, while growing, are a relatively new strategy.

A leader in this area is State Street Bank and Trust Co., Boston, which won $1.3 billion in new international equity business, largely indexed.

The total new domestic equity business, including indexing, for all respondents was $34.5 billion; international equity accounted for $5.5 billion.

Total new domestic bond business was $31.8 billion; of that $10.6 billion was indexed. There was $1.5 billion in new international bond business. International bond index funds are being marketed, but have yet to attract substantial assets.

"There's no deep secret as to why (indexing has boomed) — the inability of active managers to match the indexes," said Peter Braun, vice president and director of marketing at State Street Bank.

In last year's survey, Scorecard

# Assets allocated to bonds up 31%

By Trudy Ring

Much of the bond business that flowed to large money managers in 1987 went into index funds, while that allocated to midsize and small firms went to strategies with a particularly good track record or a special market niche.

Among managers participating in *Pensions & Investment Age*'s Scorecard survey, the amount placed in bonds was up 31% from that reported in 1986, to $31.8 billion from $24.3 billion. Managers differed as to whether bond management will continue to grow in the wake of October's stock market crash.

Among managers with more than $1 billion in total tax-exempt assets under management, those heavily in index funds took four of the top 10 spots for new bond business. Two others had smaller portions of their bond assets indexed.

Those with a majority of their new bond business indexed were Wells Fargo Investment Advisors, San Francisco, in the second spot with nearly $3.3 billion, all indexed; Putnam Cos. Inc., Boston, third with about $2.4 billion, of which $1.6 billion was indexed; State Street Bank and Trust Co., Boston, fifth with $1.4 billion, of which $1.2 billion was indexed; and Lincoln Capital Management Co., Chicago, with $893 million, all indexed.

In terms of assets attracted, bond indexing seems to be where stock indexing was a few years ago, said Peter Braun, vice president and director of marketing at State Street. It has become apparent to pension executives that a majority of active bond managers, like a majority of active stock managers, have been unable to outperform major market indexes, he said.

Still, while pension sponsors use index funds as a core investment, it would be unusual to see any pension fund 100% indexed, he added.

The top firm, Bankers Trust Co. — Investment Management Group, New York, is a force in indexing but attracted assets for other fixed-income strategies as well. Of its nearly $3.5 billion in new bond business,

PORTFOLIO MANAGEMENT

# Restrictions 'poor medicine'

## Pension execs greatly favor free market

By Barry B. Burr

Pension fund officials registered the strongest opposition among groups surveyed by the Brady Commission to suggested restrictions on trading following the Oct. 19 market crash.

They were most opposed to proposals to ban program trading, forbid or limit portfolio insurance; prohibit or constrain the use of financial derivative instruments; and place price limits on futures.

On other issues, pension officials more than others surveyed believe psychological, rather than technical or fundamental, factors were the overwhelming cause of the Oct. 19 crash, the survey showed.

In the survey, most pension funds reported the value of their equity portfolios fared better than the market on Oct. 19.

The Brady Commission, formally known as the Presidential Task Force on Market Mechanisms, surveyed 15 groups of market participants and experts, including corporate and public pension funds, securities exchanges, mutual funds, investment banks and Nobel prize winners in economics. The survey asked their attitudes on suggested trading restrictions and their opinions on why the market crashed. The task force released its 371-page report in January.

The task force sent surveys to two groups of pension funds — the 50 largest U.S. corporate pension funds (of which 25 responded) and 149 private and public pension funds on portfolio insurance (of which 80 responded).

Pension funds using portfolio insurance had a larger percentage of their assets in equities than those not using the strategy designed to limit downside risk, according to the second survey.

The 80 respondents in that survey had an average of 46% of their assets in equities as of Sept. 30. Of those, 11 were using portfolio insurance and had an average equity allocation of 56%.

The first survey showed corporate pension executives were strongly opposed to further regulation of the securities markets.

On program trading, 68% opposed any limit or ban, and 13% supported such action.

The most support and least opposition for restrictions on program trading came from banks and securities firms, recorded as one group. Some 29% were for restrictions, while 10% opposed. On average, 18% of all respondents favored such restrictions, while 25% were opposed.

Pension fund executives among the 50 largest corporate sponsors recorded the least support and strongest opposition to restricting portfolio insurance. Twenty-one percent were against any restrictions, while only 9% were for some.

Banks and securities firms again registered the strongest support for such restrictions, with 18% in favor and 5% against.

On average, 11% of all respondents are for such restriction, while the same percent are against such restriction.

Sixty-three percent of pension funds among the 50 largest corporate sponsors were against restrictions on financial instrument derivatives, while 13% were in favor. On average, 16% of all respondents favor restrictions, while 35% oppose.

On imposing price limits on futures, pension funds again recorded the strongest opposition, with 37% against and 26% in favor. On average, 31% of all respondents favored price limits, while 14% were opposed.

Respondents in general gave the most support to increasing margins on option and futures contracts, though pension funds still registered the strongest opposition. While 26% of the pension funds opposed such increases — by far the strongest opposition of any group — more pension funds — 35% — favored such raises.

Fifty percent or more of the banks and securities firms, mutual funds and largest money managers favored increases in margins.

The task force's survey found that nearly three-quarters of the responding pension funds saw the value of their equity portfolios fall 20% or less on Oct. 19. By contrast, the Standard & Poor's 500 stock index fell 20.47% that day.

Seventy-four percent of the pension funds lost between 12% and 20%, while 4% lost between 5% and 12%. Only 22% of the pension funds lost more than 20% on

# Evidence proves hedging worked

By Eric J. Seff

I intend to examine the apparent disappointing performance of portfolio insurance programs in light of theory. An examination seems particularly appropriate because the attackers of portfolio insurance are claiming the theory didn't work. Evidence points to the contrary.

When the market dropped Oct. 19 more than 508 points, or 22.61%, on the Dow Jones industrial average and 57.86 points, or 20.47%, on the Standard & Poor's 500 stock index, many portfolio insurance managers were unable to implement the sales of assets or futures at levels they previously had targeted. As a result, portfolios were more fully invested and did not benefit from as much protection as was planned.

This lack of execution is used as evidence the theory didn't work. A re-examination of the theory shows something else. What was actually experienced was the cost of increased volatility.

Volatility is a reflection of the level of the market's fluctuation. One popular way of looking at it is to measure the daily percentage changes of the market and calculate their mean. The standard deviation of the daily percentage changes about the mean is the number used as the daily volatility. Daily volatility can then be annualized by multiplying the daily volatility by the square root of the number of trading days in the year.

During the 27-year period from the start of 1959 (when Chase Investor Management Corp.'s data base begins) to the end of 1986, the average daily return of the market defined as the S&P 500 was 0.022% with a daily standard deviation of 0.79%. The annualized volatility was 12.61%. The statistics mean that two-thirds of the time the daily change in the market was expected to be 0.022%, plus or minus 0.79%. That is an expected range in return for the market any day of between 0.812% and −0.768%. As a result, the market's daily expected change was less than 1%.

For the 10-day period ended last Oct. 29, the average daily return was −1.97% and the daily standard deviation was 9.034% (an annualized 143.691%).

This means about two-thirds of the time the daily change in the market was expected to be in the range of −1.97% plus or minus 9.034%, or in the range between 7.064% and −11.004%.

The increased volatility was reflected in an increased cost of portfolio insurance.

Portfolio insurance programs can be implemented two ways: dynamically and statically. Dynamic implementation involves changes of investment exposure that are made during the course of the program to emulate the effect of purchasing an option. Static programs actually purchase the option. The latter program is considered static because the portfolio need not be adjusted during the life of the program except for rolling over.

Eric J. Seff is managing director at Chase Investors Management Corp., New York.

Portfolio insurance programs implemented dynamically have a cost based upon the actual volatility experience during the life of the program. Those implemented statically have a cost based upon premiums paid for options. A premium reflects implied volatility; once paid, that aspect of cost is locked up until expiration of the option.

Volatility is the single most important influence on hedging cost.

Most portfolio insurance programs were developed using historical data to reflect hedging costs. Market volatility, or standard deviation, of 12.6% during the 27-year period produced an average hedging cost of 3½% for a one-year at-the-money put.

However, for the first nine months of 1987, volatility had been running at closer to 16% with an implied cost of hedging of 4.6%. The expectations of both buyers and producers of portfolio insurance had been for continued volatility around that level.

Their expectations were not fulfilled. The market crash was accompanied by a tremendous increase in volatility. In the 10-day period ended Oct. 29, volatility shot up to an amazing 143% annualized rate. The corresponding theoretical hedging cost for this level of volatility is an astounding 47.7%.

Consider the ramifications of such a number. At 16% volatility, purchasing a put or creating one dynamically would have cost 4.6%. But at 140%, the cost is 47.7%. That's a very expensive hedging cost even though it is fair in the theoretical sense.

To protect an asset worth $100, you would be required to pay $47.70 for a put. Your asset must appreciate by 47.7% to overcome the cost of the put.

I would argue the difficulties experienced by dynamic hedgers are nothing more than the effects of living in a 140% volatility world when expectations had been based on a 16% level.

Most investors would not choose to employ portfolio insurance at these high levels of expected costs.

Does this mean portfolio insurance didn't work? Of course not. It does mean, however, that it might turn out to be increas-

*Continued on page 14*

# Hedging works

*Continued from page 13*
ingly expensive as volatility rises.

While this might not be much comfort to an investor who experienced a larger than expected loss, it is the correct explanation for what happened.

Well then, if portfolio insurance is too expensive, what else can the investor do?

Portfolio insurance involves buying an option, or creating one. In periods of high volatility, however, options might be undesirably expensive. If an option is too expensive to buy, why not sell it?

Selling options can be implemented by selling puts on the cash that was raised in reducing exposure to the risky asset.

A put at 47.7% might be too expensive to buy, but could present a very attractive selling opportunity. In an unchanged market, the put writer will gain by the amount of premium sold and collect interest on the cash, too.

A loss in this strategy can occur if that market declines more than an amount equal to 47.7% plus the interest income. In that case, the investor will buy stocks — at a loss.

Put writing reintroduces stock risk to the portfolio, but this can be used to determine the amount of cash to raise in the first place.

On the other hand, maybe you don't want to sell options; you only want to buy them. I've already established there are volatility levels at which one might be unwilling to pay for a "normal" one-year put, but you still have two other options:

- buy a put with a lower strike price, i.e. a higher deductible for your portfolio insurance "policy." The cost of this put will be lower and its level of protection will also be lower; or
- buy a put with a longer time horizon. Although a two-year put might cost more than a one-year put, its cost is not twice as much; therefore the cost per year is less.

**The deductible for "insurance"**

| | Cost per year | | |
|---|---|---|---|
| Deductible | One-year put | Two-year put | Three-year put |
| 0% | 9.62% | 6.09% | 4.54% |
| 5 | 7.4 | 5.01 | 3.85 |
| 10 | 5.51 | 4.04 | 3.21 |
| 15 | 3.93 | 3.18 | 2.63 |
| 20 | 2.68 | 2.44 | 2.11 |
| 25 | 1.73 | 1.81 | 1.66 |

To illustrate the economics of a higher deductible I have chosen various strike prices for one-, two- and three-year puts. Assumptions include a 30% volatility with a 7.1% interest rate and 3.1% dividend yield.

As illustrated in the accompanying table, the greater the deductible, the lower the cost of the put — just like real insurance. Don't become euphoric when you first notice the dramatic reduction in costs: these options cost less because they are worth less. ■

The best kind of performance fee serves the interests of client and investment manager equally well, with both parties sharing the risks as well as the rewards. We share the concern about potential hazards of performance fees. That's why we will work closely with our clients to design creative performance fee arrangements that can bring out the best in everyone.

We are Marinvest, where our portfolio managers work together as teams. Our "Value Plus" equity and rotational fixed income management have been successful because a high degree of portfolio diversification is assured.

We have an investment approach we'd like to tell you about. And a performance record that can speak for itself.

# Market

*Continued from page 13*
Black Monday.

By contrast, 28% of the mutual funds and 25% of the asset managers lost more than 20% on Oct. 19.

Psychological and technical factors were cited by the groups surveyed as the most important factors for the Oct. 19 crash. Each factor received 40% of the responses, while fundamental factors received only 20%.

But fundamental factors were cited by 77% of the respondents as the most important reason for the market decline the week preceding the Oct. 19 crash, compared with 17% for psychological and 6% for technical factors.

Pension funds by far leaned on psychological factors as the cause of the Oct. 19 crash.

Sixty-six percent of the pension funds — more than any other group — cited psychological factors. On the other hand, only 13% of pension funds cited technical factors, the least of any group surveyed.

The pension fund reaction was in stark contrast to other groups surveyed, which spread the blame for the Oct. 19 crash about evenly between psychological and technical factors.

Of the psychological factors most often cited by all groups as a cause of the Oct. 19 crash, panic was tops, followed by erosion of confidence in U.S. policies, investor nervousness and fear of the New York Stock Exchange closing. Pension fund reaction on psychological factors wasn't broken out separately.

Of the technical factors most often cited as a cause of the Oct. 19 crash, pension funds listed portfolio insurance as the most important (80%), stock index arbitrage as second (45%) and program trading as the least (25%).

Of the fundamental factors cited as the most influential in causing the market decline the week before Oct. 19, the groups ranked in importance rising interest rates, trade or budget deficits, overvalued bull market, declining value of the dollar and overall change in economic outlook.

Among the groups surveyed, responses came from seven of 15 Nobel prize winners, two of 12 discount brokers, 43 of the Fortune 100 chief executive officers, nine of 17 federal regulatory organizations, and 18 of 50 mutual funds.

Members of the the task force were appointed by President Reagan. ■

REAL ESTATE

# Commitments up 52.6%

By John Covaleski

Tax-exempt institutional investors committed 52.6% more to equity real estate managers during the first 11 months of 1987 than they did a year earlier, a *Pensions & Investment Age* survey shows.

*P&I Age*'s annual Scorecard shows the managers received additional commitments of about $10.85 billion between Jan. 1 and Dec. 1 of last year, vs. $6.879 during the same period of 1986.

The survey excludes gains from property appreciation.

The 52.6% increase was due to a variety of factors:

- With a 5-year-old bull stock market, a pension fund's assets rose, meaning more dollars had to go into real estate to maintain the same target asset allocation.
- Many fund executives decided to move into direct real estate investments, doing so without eliminating all of their commingled fund investments.
- Pension funds committed about $2 billion to the purchase of Cadillac Fairview Corp., a Toronto development company that was the largest real estate transaction ever.

The top 10 managers in the survey accounted for $8.689 billion, or 80.2%, of the total new real estate allocations. 1986's top 10 accounted for $4.682 billion, or about 68%, of the total.

Pension funds have moved to direct separate account investments, noted executives from several of the top 10 management firms.

David Glickman, president of Heitman Advisory Corp., Chicago, which ranked third in 1987 after finishing No. 1 in 1986, said two-thirds of his firm's $1.1 billion in new real estate contributions were from separate account business.

**Most new real estate equity business**

| Firm | $ millions |
|---|---|
| JMB Institutional Realty | 1,926 |
| Copley Real Estate Advisors | 1,240 |
| Heitman Advisory | 1,100 |
| Equitable Real Estate Investment | 991 |
| Richard Ellis | 670 |
| LaSalle Advisors | 618 |
| Boston Co. | 608 |
| Jones Lang Wootton | 600 |
| TCW Realty Advisors | 478 |
| RREEF | 458 |

Richard Ellis Inc., New York, which only handles separate accounts, reported $670 million — ranking it fifth — in new contributions in 1987, up from $301 million, and sixth place, in 1986.

And Copley Real Estate Advisors, Boston, which ranked second with $1.24 billion in new contributions, had about $600 million of that in separate accounts. The remainder is in the Developmental Properties Account and Copley Institutional Investors commingled funds. Copley was No. 3 in 1986 with $775 million in new accounts.

"There's a trend where the big players with significant core portfolios want separate accounts to have better control," added Leslie Farmer, a vice president with JMB Institutional Realty, Chicago.

JMB led all managers with $1.926 billion in contributions, but gained just $110 million in separate accounts. JMB finished No. 8 in 1986, with $261 million.

JMB raised $1.5 billion for the purchase of Cadillac Fairview and Copley raised $500 million in separate accounts from two clients for the portion of the Cadillac Fairview portfolio that JMB did not buy (*P&I Age*, Sept. 21).

The Cadillac Fairview deal underscores institutional investor interest in retail real estate during 1987. JMB's acquisition included 31.55 million square feet of existing and planned retail space.

JMB reported 44 new clients in 1987, the most reported of all the real estate managers, followed by Copley, with 37.

With the top 10 managers got the lion's share of new commitments to real estate, investors apparently are placing their assets with a select group of managers.

Paul Saylor, principal in Institutional Property Consultants Inc., Atlanta, and William Ramseyer, president of Pension Realty Advisors, San Francisco, both said the trend will continue, although the managers with the most money

## Milwaukee building purchased

A joint venture of the $44 billion California Public Employees' Retirement System, Sacramento; the $15.6 billion State of Wisconsin Investment Board, Madison; Equitable Real Estate Management Inc., New York, and developer Trammell Crow Co., Dallas, paid $195 million cash to First Wisconsin National Bank of Milwaukee for the First Wisconsin Center, a 42-story retail, office and parking garage complex in Milwaukee. Equitable arranged the deal. The site has 1.2 million square feet of rentable space and includes adjoining land that makes it suitable for further development.

# Buying spree set for PRISA

## Strategy: Economic diversification

By John Covaleski

NEWARK, N.J. — The Prudential Realty Group, Newark, N.J., is launching a new investing strategy for its $3.884 billion Prudential Property Investment Separate Account open-end real estate fund, which lost a net $878 million in client investments for the year ended Sept. 30.

PRISA, which acquired no property in 1987, will buy between $750 million and $1.2 billion in properties over three years to help implement the strategy. Sales of properties already owned by PRISA will help pay for the acquisitions.

The strategy includes a new methodology for determining how to diversify the portfolio's holdings, based more on the economic characteristics of markets, than on geography.

Prudential officials are meeting with clients to discuss the strategy.

Clients seemed heartened by PRISA's approach. "I like diversifying by economic criteria rather than just geography; the economy drives real estate, not geography," said Allan Steinkamp, vice president of Fiduciary Trust International, which manages the investments of the $7 billion United Nations Staff Joint Staff Pension Fund, New York.

Mr. Steinkamp said he had been "disappointed" in the returns from PRISA. The U.N. fund has about $100 million invested in PRISA.

"I'm not saying we'll put more money in PRISA, but I will be looking at this new

*Continued on page 16*

**Under the new strategy, managers of Prudential's Property Investment Separate Account will buy more retail properties such as the Winrock Mall in Albuquerque, N.M., which already is part of PRISA's holdings.**

WRAP-UP

### *Tokyo rents still high*

NEW YORK — In contrast to Tokyo and London, office costs in New York are comparatively inexpensive, according to the latest survey of world office rental levels by Richard Ellis Inc., New York.

The semiannual survey compares total costs — rent, common area maintenance, taxes and operating expenses — in 21 major office markets.

Tokyo tops the list at $154 per square foot in total occupation costs, followed by London (city), $138; London (West End), $99; and midtown Manhattan, $62.50.

Costs in Tokyo have stabilized in the past six months, according to the Ellis report, while London rents continue to rise, fueled by demand for office space after the deregulation of the United Kingdom's financial markets.

### *On the auction block*

CHICAGO — Real estate auctions conducted by Sheldon Good & Co., Chicago, generated sales of $43.2 million during a three-month period, according to Gordon J. Greene, president of Real Estate Auctions Inc., a Good subsidiary.

The nine auctions in 10 cities included the sale of 300 commercial, industrial and residential properties. Auctions in Dallas and Houston sold $8.64 million properties.

# Buying spree

*Continued from page 15*

strategy," he said.

Albert W. Kirschbaum, investment manager of the $1.3 billion pension fund of Bechtel Power Corp., San Francisco, an investor in PRISA since 1980, said the strategy is an "important step" in the evolution of real estate investing.

PRISA's total return for the year ended Sept. 30 was 5.22%, according to PRISA's annual report. That trailed the FRC Property Index's return of 5.5%. The number of investors in PRISA during that period dropped to 257 from 297; withdrawals totaled $922 million for the same period; new deposits, $43.6 million.

The new strategy is not a reaction to the withdrawals, said Charles R. Lightner, vice president and senior portfolio manager of Prudential Realty. Instead, he said, its aim is to make PRISA more able "to provide diversification at a risk level suitable to clients."

The traditional method of geographic diversification, in which the country is divided into four regions and acquisition decisions are based on spreading portfolio holdings over those regions, is "naive," he said.

David G. Shulman, a vice president in real estate research for Salomon Brothers Inc., New York, which assisted Prudential with its strategy, said, "This brings more coherence to real estate diversification." The four qadrant approach is too broad to make use of economic factors, he said.

Consultants' reaction to the Prudential strategy was mixed.

Ronald A. Karp, president of Ronald A. Karp Associates, Summit, N.J., called it "much ado about nothing." He said local market economics always have been considered by managers in making acquisitions.

Barbara Cambon, principal in the San Diego office of Institutional Property Consultants Inc., said investors look at local economic factors but don't usually compare the local factors of several different markets in determining an overall portfolio. She likened the Prudential strategy to a "top-down" approach used by equity managers in selecting stocks, and said real estate's traditional approach is more "bottom-up."

"Prudential's been able to quantify the relationships of economics and geography. That's an important step forward," Ms. Cambon said.

Mike Young, a manager with Pension Realty Advisors Inc., San Francisco, said Prudential's more-detailed approach should be a vast improvement over the "never really appropriate" four quadrant style.

But Mr. Young and others said Prudential executives could have difficulty finding $1.2 billion worth of institutional-quality real estate to acquire in three years.

Where PRISA will buy and sell hasn't been determined.

PRISA's new criteria will be the role of a market in the overall economy; the market's dominant employment characteristics; and how employment growth is affected by national business cycles, such as a recession.

Subcategories for the first criteria include whether the activities within the market have a national, regional or subregional effect; or whether the market's driving force is dominated by the government, such as a state capital or city with military installations.

Dominant employment characteristics include whether the market is dependent on one industry or one type of work force.

Under the new approach, PRISA will avoid heavy investments in markets sharing the same economic criteria. Investing in Los Angeles and New York would provide geographic diversification, but wouldn't meet the diversification criteria of the effect on an economy as both cities have national effect.

Mr. Lightner said this strategy could have spared the recent crisis in which some managers found themselves overweighted in properties in oil-dependent markets. Real estate money managers could have invested in the Southwest to get geographic diversification, but might not have considered that all were oil industry dependent, meaning they all suffered when that industry plunged.

The criteria in the Prudential model would have called for investing the Southwest, but would have discriminated against placing too many investments in one-industry markets.

The PRISA strategy also calls for change in the mix of property types over three years. The emphasis will shift to apartment, retail and industrial property and away from offices.

Offices as a percentage of total holdings will go to about 40% from 49.9% as of Sept. 30; apartments will go to about 10% from about 5.5%; retail will go to 20% from 16%; industrial to 20% from 17% and hotels/motels to 10% from 9.2%. The existing and revised allocation also has 2.4% in land and agriculture. ■

# Up 52.6%

*Continued from page 15*

might have too much to make the optimum investments for their clients.

"There's too much loot in too few hands," said Mr. Saylor.

Jack Phillips, managing director of Copley, said it is conceivable managers taking in substantial contributions could compete against themselves.

Ms. Farmer said managers can offset this by refusing to accept new clients if "their plate is too full." She said in 1987 JMB answered far fewer requests for separate account business than it received.

This year's Scorecard also showed continuing investor preference for specialized real estate managers over insurance companies, which once dominated the real estate investment industry.

Equitable Real Estate Investment Management, Atlanta, a subsidiary of Equitable Life Assurance Society of the United States, was the only insurance company affiliate to make the top 10. Equitable reported $991 million in contributions (all fully invested), ranking it fourth, up from $814 million it reported in 1986.

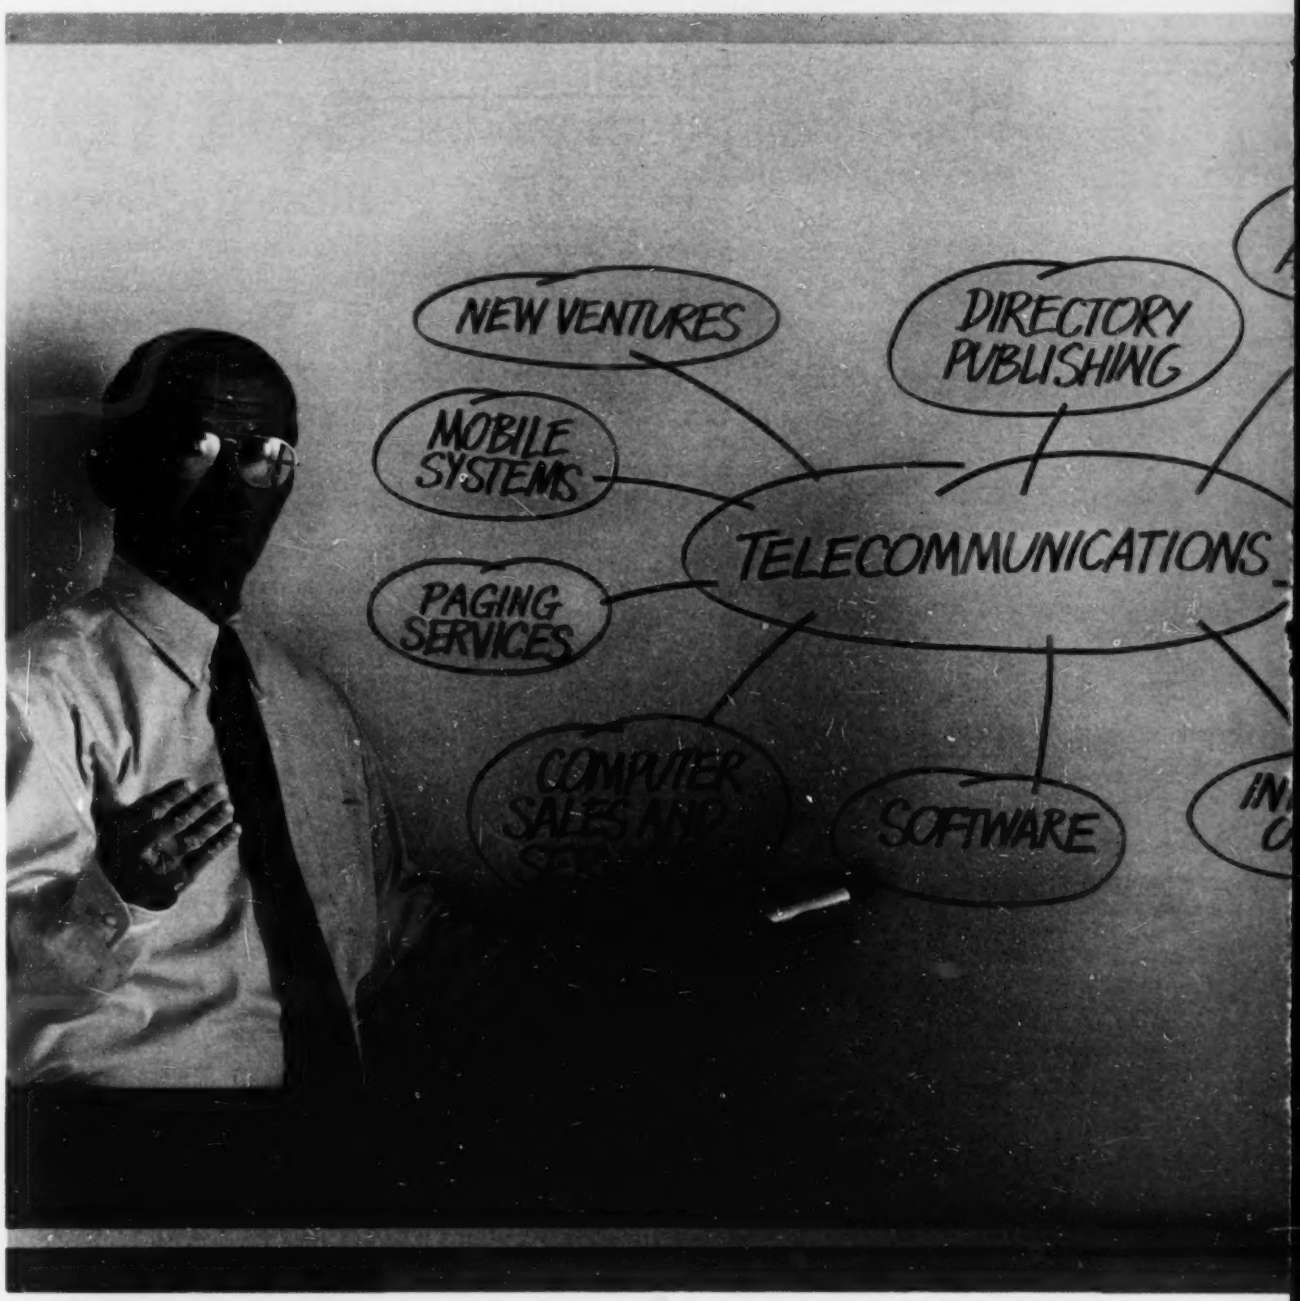
Aetna Life Insurance Co., Hartford, Conn., ranked 11th with $316 million in net assets; in 1986 it ranked third with $511 million.

Aetna; J.W. O'Connor & Co., New York; and Eastdil Realty Inc., New York, which did not answer the 1987 report, were the only managers that didn't repeat in 1987.

J.W. O'Connor reported raising no new money. Nancy I. Lashine, vice president, said the company intentionally held back on fund raising until its retail trust was fully invested.

New to the top 10 in 1987 are: LaSalle Advisors Inc., Chicago, which placed sixth with $618 million; Boston Co. Real Estate Counsel Inc., Boston, No. 8, $478 million; and RREEF, No. 10, $316 million. ■

BellSouth



INTERNATIONAL

# Foreign bonds rise to top

By Marlene Givant

The popularity of foreign bonds stole the show in attracting new business during the 11 months ended Dec. 1, according to the *Pensions & Investment Age* Scorecard of investment managers' new business.

Active managers for the first time attracted substantial international fixed-income business in 1987. In fact, during the first six months of the year, U.S. tax-exempt funds committed at least $1.472 billion to the area largely in order to diversify domestic fixed income (*P&I Age*, Sept. 21).

Last year's show stopper, international stock index funds, leveled off in the 11 months but maintained its momentum, with index leader State Street Bank & Trust Co., Boston, alone gaining the most international new business in terms of assets with $1.31 billion.

State Street wooed assets from more new clients for its international stock index funds than the two top active international managers combined during the period.

The phenomenon parallels the domestic boom in indexation, but with one firm enjoying the vast majority of the new business.

But some observers think growth of international passive management will slow. "People are continuing to be convinced of the value of active management. Passive management has reached as far into people's portfolios as it's likely to go," said Chris Carter, a director of WorldInvest Ltd., London, an active manager.

The survey polled international and global equity and bond managers on new business including contributions from new U.S. tax-exempt clients and additional contributions from existing clients during the period. The figures did not include market appreciation, dividends and interest.

**Most new international/global business**

| Firm | Total | Equity | Fixed |

* As of December 31

State Street, which managed $23.8 billion in total U.S. tax-exempt assets as of Dec. 31, led the growth for the second year in a row and gained nine new clients.

"It (fixed income) went from a product people weren't terribly interested in to one that came into its own in 1987. This was as much true for us as for the industry," said John F. McNamara, director of Baring International Investment Ltd., London, which manages $163 million in fixed income.

The growth and diversity of international investments has accelerated since 1986; for the 11 months ended Dec. 1, new international/global business totaled $7 billion, almost all in equities. The amount surpassed last year's gain of about $4.9 billion.

The top three active managers for new business were WorldInvest, formerly BA Investment Management International Ltd., with a healthy $779 million gain as of Dec. 31 — $379 million in equities and $400 million in fixed income — and 14 clients; Posthorn Global Asset Management, formerly American Express Asset Management, New York, with $395 million, and nine new clients; and Baring, with $389 million and seven new clients. The firms managed $1.535 billion, $590 million and $1.472 billion, respectively, as of Dec. 31.

The majority of WorldInvest's 1987 new business was fixed income, accounting for $400 million of the firm's $725 million gain.

Similarly, fixed income comprised $180 million of Posthorn's and $163 million of Baring's increases.

Rounding out the Top 10, in descending order, were Warburg Investment Management International Ltd., London, with a gain of $242 million; Morgan Grenfell Investment

**"In the Hollow of the Great Wave of Kanagawa," from "The Thirty-Six Views of Fuji" by Hokusai, sold for more than $1 million — almost double what British Rail expected to receive.**

# Print auction brings bonus

By Holly Smith

LONDON — The $10 billion British Rail pension fund has found beauty truly is in the eyes of the holder.

In its third major sale of artwork from a $67 million art portfolio, the fund raked in $2.5 million for Japanese prints that Sotheby's auctioneers had expected to bring in between $1.4 million to $1.7 million.

In fact, bidding reached record-breaking levels for some of the works of art. A record for a single Japanese print was set when a picture of a tea shop waitress sold for $390,000. And an album of 41 prints by Hokusai, which included "Thirty-Six Views of Fuji," was expected to fetch $566,000 but sold for more than $1 million. "One of these views, 'The Great Wave of Kanagawa' . . . had become virtually synonymous in the West with the idea of the Japanese print," a Sotheby's spokesman said.

Not surprisingly, given the strong yen and the subject matter, Asian buyers were represented heavily at the sale. The Hokusai album of prints was sold to International Fine Art Consultants Ltd., Hong Kong. The same firm also paid $175,000 for a print by Utamaro called "Making-Up After a Bath." Another buyer was Seibu Department Stores Ltd., Tokyo.

The sale is part of a planned liquidation of the art portfolio, whose book value is $67 million; fund officials declined to reveal the market value. Liquidation might take as long as 10 years, said David Andrew, company secretary of the British Rail Pension Trustee Co. Ltd., London.

The sales began in earnest with the sale of old master prints for a total of $3.3 million last June, although smaller sales had happened before then (*Pensions & Investment Age*, June 15).

In November, the fund sold 27 silver items it had held for 11 years for a total of $1.8 million, which constituted a return of 3% per year. No further sales are ex-

# Takeover dispute

## Stock purchase fuels talk of regulation

By Milton Smith

SOUTH YORKSHIRE, England — Use of pension funds in fighting hostile takeover bids might lead to further regulation in the United Kingdom of plan investments in their sponsoring companies.

The purchase last month of 100,000 shares of MS International PLC, South Yorkshire, by the company's pension fund just days before a $45 million hostile takeover bid by Dobson Park Industries PLC, Lancashire, has brought the issue to a head.

The U.K. issue mirrors that raised in the United States in the early and mid-1980s, when some corporate pension funds purchased large blocks of their sponsoring companies' stocks to avert takeover attempts. In the most notable of these cases, U.S. courts ruled Grumman Corp.'s pension fund trustees violated their fiduciary duty by purchasing company stock at a premium when the company faced an ultimately unsuccessful bid by The LTV Corp. (*Pensions & Investment Age*, March 5, 1984).

Dobson Park, a mining equipment and industrial electronics group, launched its bid Jan. 12 for MS, which makes defense and mining equipment. Michael Bell, chairman and chief executive of MS, who owns about 5% of the company's stock, insists management is determined to stay independent.

But one of the most controversial aspects of the bid is the Jan. 8 purchase of MS shares by the company's pension fund. The fund's stake already exceeded the U.K.'s statutory 5% disclosure level, and thus was required to announce details of the purchase just before the bid.

In a statement to the stock market on Jan. 18, the MS fund confirmed it had lifted its holding to 6.08% from 5.69%. The shares are understood to have been purchased through Phillips & Drew at $1.33 a share, or about 16 cents above the value of MS at the beginning of January. But MS shares subsequently rose to $1.96 after the bid was launched.

Holdings by the fund, Mr. Bell and Bell family interests comprise about 20% of the company's stock.

Hill Samuel, the merchant bank advising Dobson Park, might ask the London Stock Exchange to investigate the purchase of MS shares by the pension fund, sources said, although that might be a tactical maneuver.

The MS affair only strengthens the voice of those who argue such investments should be subject to stricter regulatory controls, either through voluntary guidelines issued by the National Association of Pension Funds or through legislative changes.

Current law requires a pension fund whose investment in its sponsoring company's outstanding stock hits 10% to notify the Superannuation Fund's Office —

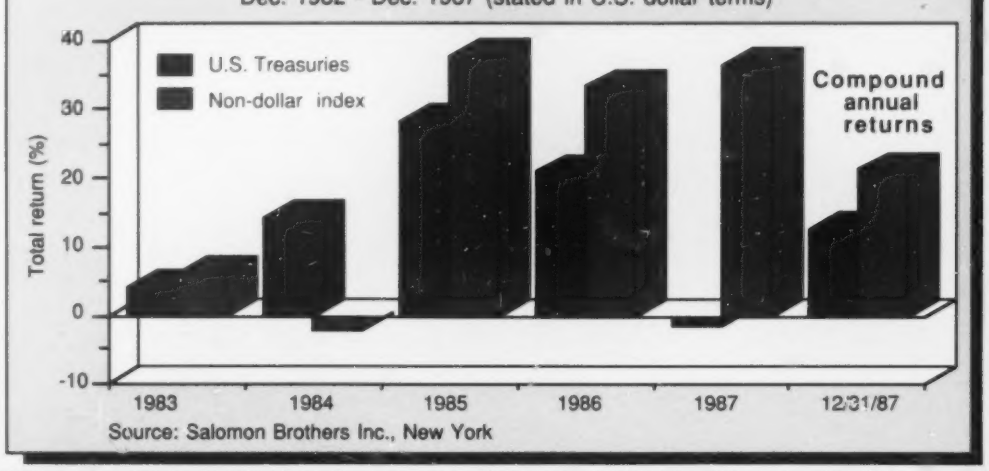
**U.S. Treasuries and non-dollar government bond returns**

Dec. 1982 - Dec. 1987 (stated in U.S. dollar terms)



Source: Salomon Brothers Inc., New York

# Foreign bond

*Continued from page 20*
Services, London, with $228 million; PCM International, Newark, N.J., with $218 million, all in fixed income; Oechsle International Advisors, Boston, with $211 million; Schroder Capital Management International, New York, with $200 million; and Wells Fargo Investment Advisors, San Francisco — the only other passive manager to break into the Top 10 — with $195 million.

While few of the top active managers beat the Morgan Stanley Capital International Europe Australia Far East index over the one-, three- or five-year periods ended Dec. 31, they still posted strong gains.

WorldInvest, which returned 5.42% in 1987, sparkled over longer periods, returning a compound annualized 49.8% for the three years and an annualized 30.68% for five in international equities. This compares with the EAFE's 25.2%, 49.4% and 35.1%, respectively.

The firm's international bonds returned 34.95% for one year, a compound annualized 37.67% for three years and 20.75% for five years. The Salomon Brothers Non-U.S. Government Bond index returned 35.15% for the year and 33.83% for three years in U.S. dollar terms. The index does not have five-year figures.

WorldInvest's new clients included GTE Corp., The Kroger Co., Harvard University, National Starch & Chemical Corp., Pan American World Airways Inc., Pechiney Corp.; Trans World Airlines Inc.; and McKinsey & Co. Inc.

Posthorn returned 2% for the 12 months and a compound annualized 45.54% for the three years in international equities. It had no five-year equity figures.

In international fixed income for the year it returned 35.3%; Posthorn has no longer-term international fixed figures. But for global fixed income, it returned 24.66% for one year and a compound annualized 25.7% for three years. Again, it had no five-year figures. In comparison, the Salomon Brothers World Government bond index returned 18.41% for one year and an annualized 22.85% for three.

Posthorn's new clients include Lone Star Industries Inc., American Telephone & Telegraph Co. and Pacific Gas and Electric Co.

Baring's international equity accounts returned 16.1% for one year, a compound annualized 43% for three years and 30% for five years. Its international bond return was 35.3% for the one-year period, it was the first year in bond management.

Kaiser Aluminum & Chemical Corp., Atlantic Richfield Co. and BP America were among Baring's new clients.

Morgan Grenfell's foreign equity accounts earned 12.4% in 1987, an annualized 42.1% in the three years ended Dec. 31 and 28.4% for the five years. Its international fixed-income returns were 38.4%, 35.2% and 20.2% for those periods, respectively.

Warburg's international equity composite rose 11.2% for one year, an annualized 43.7% for three years and 30.1% for five.

Global fixed income was up 22.9% in 1987 and an annualized 29.6% for the two years ended Dec. 31, the longest period available. International fixed income rose 35.5% in 1987. ■

# Prints

*Continued from page 20*
pected this year, and later sales will be stretched "over a period of years," said Mr. Andrew.

He said the Japanese art had been purchased 10 years ago for roughly 400,000 pounds ($700,000 then).

The artwork was bought when the United Kingdom had exchange controls that prevented investment abroad and when the stock market was very weak. Also, some of today's desirable investments, such as index-linked gilts (government bonds that are tied to inflation) hadn't yet been invented.

The results of the sale meant the prints had brought an annual return of 12% — or 3% above the inflation rate.

"We didn't lose money by this," Mr. Andrew said of assembling the print collection. He said the appreciation obviously did not match what the stock market had risen to before October, but the investment outperformed fixed-interest instruments.

"We're not disappointed, it hasn't proved to be a disaster — it has given us a real return."

The fund is still waiting to see if it will face any taxes on the profits from the sales. "It's a gray area," said Mr. Andrew. ■

# Takeover

*Continued from page 20*
the industry group that regulates pension funds — and receive authorization before purchasing additional shares.

The Inland Revenue — the equivalent of the U.S. Internal Revenue Service — is said to be scrutinizing the matter, but has not yet issued any statements.

The investment committee of the NAPF has responded to criticism of pension funds investing in their sponsor companies — particularly in takeover situations — by setting up a special group on the subject. It also is polling its pension fund membership to ascertain their views.

The association's findings are expected to be ready for its annual investment conference this month and it is rumored the organization might come out in favor of tighter controls.

The association's inquiry was triggered in part by another case — that of Bryant Holdings PLC, a West Midlands-based housebuilder. Its pension fund bought a 1.27% stake in Bryant when the company was the target of an unwelcome — and unsuccessful — bid from English China Clays PLC, Cornwall. ■

# On the move

*Continued from page 21*
marketing and client services with Fred Alger Management Inc., New York, has joined Simms Capital Management, New York, as a director of marketing.

She will concentrate on attracting U.S. pension fund business to the global manager, which runs $400 million, mostly for individuals.

Ms. Woodall said she joined Simms Capital Management for the promise of the firm and its area of expertise.

"The most important reason is that it is an uncommon group of investment professionals," Ms. Woodall said.

"Also, the majority of pension fund demand and the growth area over the foreseeable future will be the international and global arena," she said.

We can make your 401(k) problems disappear.

You don't have to hide from your 401(k) problems. Administrative problems like late, inaccurate statements. Lagging investment performance. Aggravated employee participants.

The Hartford's Asset Management Services can solve all of these problems. And when we take over your plan, we handle the details for you! First, we'll ease the transition by working hands-on with your current provider to obtain your plan records. Then, we'll analyze the problems and recommend a custom-tailored solution.

With The Hartford, you'll finally be able to rely on accurate and timely participant statements. For example, you can expect these statements in four weeks after the period ends.

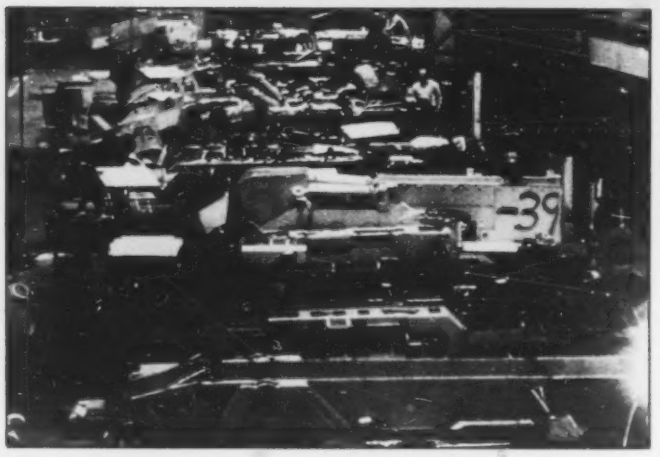
FINANCING



Things are looking better for Joy Technologies. Increased sales and reduced debt are easing the fears of investors worried about performance since the leveraged buy-out last year.

# LBO success moves closer

## Joy Technologies nearing goal

By Brad Rudin

PITTSBURGH — Joy Technologies Inc., a precariously financed leveraged buy-out, has cleared one hurdle by selling assets and reducing debt, and increased its chances of becoming a textbook success story.

The company also increased its credibility by posting strong quarterly results, although skeptics about its long-term prospects still exist.

Having reduced the debt burden to more manageable levels by using the proceeds from the sale of assets, Joy faces the steadier work of wringing enough out of the remaining business units to meet post-leveraged buy-out interest expense and principal repayment obligations.

Joy's yield spread — like that of other high-yield companies — widened substantially after the Oct. 19 stock market fall. But the spread tightened last month after the company released its fiscal 1988 third-quarter report for the period ended Nov. 27.

The company's debentures recently traded at $93.50, up sharply from the $85 in December.

The third-quarter report eased investors' concerns about the company by noting increased sales and reduced debt.

'Joy's recently announced third-quarter results were encouraging: operating cash flows were 21% above the second quarter," according to the Jan. 18 Research Review, published by Donaldson, Lufkin & Jenrette Securities Corp., New York.

"Joy Technologies continues to improve its post-LBO performance," according to the Jan. 14 High Yield Sector Report, published by Kidder, Peabody & Co. Inc., New York. "Over the last two quarters, the company has increased its cash flow through significant margin improvements and has reduced debt through asset sales."

The company sustained a net loss of $4 million, negative $4.54 a share, on revenue of $135.1 million in the third quarter. Current operating results are not comparable to the same period last year because of the effects of purchase accounting and differences in the debt structure of the company for the current period, Joy said in its third-quarter 10-Q report.

Joy Technologies completed a $621 million leveraged buy-out of Joy Manufacturing Co. in February 1987, a transaction that left the successor company with a pro forma debt-to-capitalization ratio of 92% and the need to sell assets without too much delay.

Joy Manufacturing accepted the

# Tiffany's luster, glitter returning

By Marcia Parker

NEW YORK — Tiffany & Co., the internationally renowned retailer of jewelry and luxury gifts that went public less than a year ago, has shaped up financially and embarked upon an aggressive drive to make its prestigious products available throughout America and the world.

A lackluster performer when it was owned by Avon Products Inc., New York, and a money loser for two years after it was taken private in 1984 by William R. Chaney and a management and investor group, Tiffany's has turned around. The company has stemmed the losses that marred its high-class image and temporarily soured some Wall Street analysts on the 150-year-old retailer of high-priced jewelry, silverware, china, crystal and other glamorous merchandise.

Today, the black ink is flowing, sales and earnings are strong, an aggressive growth strategy is in place, business is expanding worldwide, a host of new products have been well received, the balance sheet is stronger and analysts are recommending Tiffany's stock.

"Our purchase recommendation of Tiffany's stock reflects the uniqueness of the company's name, a talented management team, the integration of sophisticated systems, the growth potential of products and distribution channels, and successful participation in meeting the needs of the rapidly growing affluent customer base," said Stacy Ruchlamer, who follows the company for Shearson Lehman Brothers Inc. Shearson co-managed Tiffany's initial public offering with Goldman, Sachs & Co.

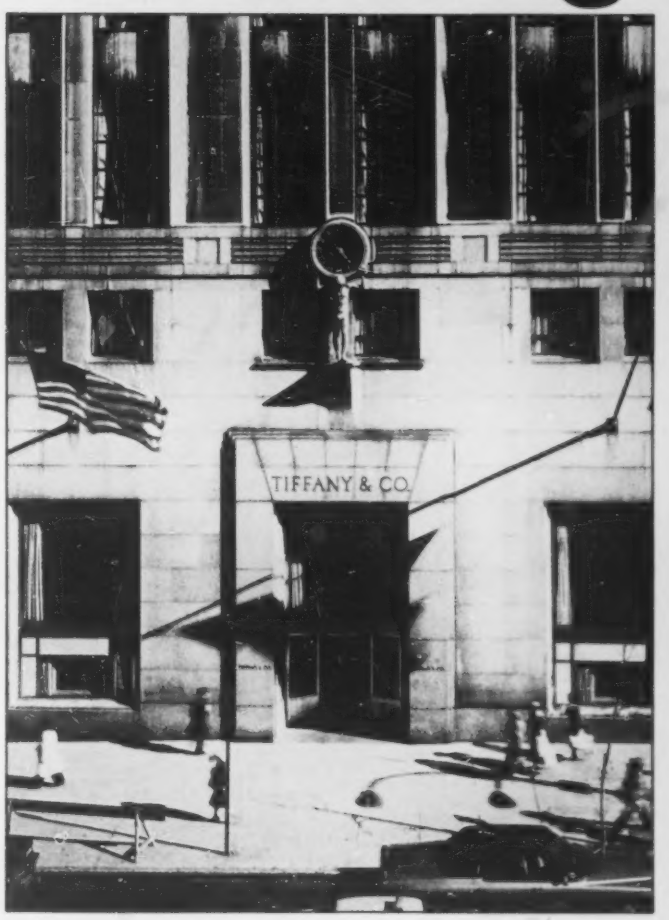
Tiffany's is a good example of how a buy-out often provides skilled managers-turned-owners with a chance to improve a division that was performing poorly as part of a large diversified corporation. As was the case with Tiffany's, the payoff eventually comes when the private company comes full circle by going public and investors recognize its strengths.

"After achieving very strong results through the first three quarters of 1987 and in our Christmas season, we remain optimistic as we enter 1988," said Mr. Chaney, Tiffany's chairman, whom analysts credit along with his management team for the turnaround.

"We expect to aggressively pursue our diversified growth strategies. These include expansion within our three channels of distribution through retail activities in the U.S., Europe and Japan, along with further market penetration in our direct-marketing business, both in sales to corporations and through our catalogues," he said. "Our growth strategy also calls for expanded selections of our product offerings. Of course we continue to monitor changes in the economy but are confident because of the strong appeal of Tiffany to our clientele."

For the first nine months of the year ended Oct. 31, Tiffany's net earnings were $6.5 million, vs. a loss of $108,000 in 1986. Sales rose 29% to $148.2 million, with U.S. retail sales up 26% and international sales up 75%. Unlike many companies, Tiffany's saw

*Continued on page 25*



The glamorous Tiffany's is financially gleaming again — earnings are booming, sales are strong and an aggressive growth strategy is regaining the confidence of analysts and investors.

# Corporate credit quality improving

**1987 credit rating changes**

| | 1987 | | 1986 | |
|---|---|---|---|---|
| | Up | Down | Up | Down |
| Duff & Phelps | 62 | 81 | 64 | 91 |
| Fitch Investors Service | 38 | 51 | 42 | 43 |
| McCarthy, Crisanti & Maffei* | 30 | 47 | 47 | 73 |
| Moody's Investors Service | 100 | 176 | 143 | 246 |
| Standard & Poor's** | 187 | 285 | 149 | 364 |

The numbers for Moody's reflect the number of issues affected by rating changes, while the data for the other rating agencies reflect the number of rating actions.

* At the end of 1986, MCM stopped rating below-investment-grade industrials
**Preliminary figures

Source: The rating agencies

By Brad Rudin

NEW YORK — Although downgrades still outnumbered upgrades, the credit quality of U.S. corporations improved in 1987 as the number of downgrades fell sharply and upgrades as a percentage of total actions increased.

But weak business conditions in a broad spectrum of industries will keep downward pressure on credit quality in 1988, Moody's Investors Service and Standard & Poor's Corp. reported.

At Standard & Poor's, preliminary numbers show upgrades accounted for 40% of the agency's rating actions in 1987 compared with 29% in 1986. Improvements in credit quality also could be seen in data from by Duff & Phelps Inc., with upgrades comprising 43% of that firm's actions in 1987 vs. 41% in 1986.

Moody's released data showing 36% of issuers it covered received a higher rating in 1987, compared with 37% in 1986.

Upgrades as a percentage of rating actions by McCarthy, Crisanti & Maffei Inc. remained steady at 39%; the number dipped at Fitch Investors Service to 43% in 1987 from 49%.

Utilities and financial institutions bucked the improving trend found in other sectors of the economy, Standard & Poor's reported. Some utility companies experienced regulatory and construction difficulties in 1987 while the industry as a whole confronted competitive pressures.

Bank credit quality remains vulnerable because of problem loans, and securities firms are challenged by the need to cut costs, according to S&P.

Special events — leveraged buy-outs, mergers or acquisitions, recapitalization and litigation — played a significant part in the

*Continued on page 24*

# LBO success

*Continued from page 23*

$35-a-share bid from a group led by Adler & Shaykin, a New York investment firm, after rejecting an unsolicited $31-a-share offer from The Pullman-Peabody Co.

Joy merged with Ecolaire Prime Inc. — a producer of ash removal systems — in an $19.8 million transaction completed last June.

Joy Technologies is a leading producer of underground mining machinery and also makes industrial air pollution equipment, ash handling systems for power plants, heavy duty elements of combustion systems and software for plant automation.

"I think overall we are pleased with where operations are today," said Eugene J. O'Sullivan, vice president and treasurer. "What we'd like to see is stronger performance on the part of the non-coal business; that's where the upside of the company's business is."

If Joy succeeds, the company will have defied the doubts of credit-rating analysts and established itself as a textbook example of a leveraged buy-out that survived Oct. 19, difficult fundamentals and a mountain of debt.

Although high-yield bond analysts at Kidder, Peabody and Donaldson, Lufkin & Jenrette gave Joy good marks after the company reported its third-quarter earnings, analysts at Moody's Investors Service and Standard & Poor's Corp. were less optimistic.

Last spring, Moody's gave a B1 rating to Joy's 13¾% senior subordinated debentures due 1999, while Standard & Poor's assigned a B– rating to those securities.

"Can their operations generate enough earnings? That's the tough thing to see," said Daniel R. DiSenso, an analyst at Standard & Poor's.

"They are not out of the woods yet," said John B. Morris Jr., a Moody's analyst. "They always have their back against the wall."

Still, the analysts saw some bright spots: solid management; stable fundamentals; lower interest expense; and Joy's leading position in the mining equipment manufacturing business.

Much of the good news comes from asset sales, which helped chop third-quarter fiscal 1988 debt to $458 million from $674 million.

A capture of between $40 million and $50 million of surplus pension assets expected in midyear should enable Joy to make another big dent in its shrinking debt load. That reversion, however, is the subject of a federal lawsuit by former employees. One of the claims in the suit, filed in December, is that plan participants and beneficiaries should receive assets for funded but not accrued benefits, before the company receives any assets, according to the 10-Q report.

The good news for Joy is the timing of the asset sales, which provided the basis of the leveraged buy-out. "Fortunately, Joy had agreements for its asset sales before the (Oct. 19) stock market crash and was not affected by declining asset values," noted the Kidder, Peabody report.

Third-quarter earnings before interest, taxes, depreciation and amortization were $18 million compared to pro forma second quarter EBITD of $16.2 million.

Cash flow from operations would be insufficient to meet the company's debt service requirements coming due before June 30, 1989, Joy acknowledged in June 1987 when it sold high-yield securities to pay down short-term debt associated with the buy-out.

Kidder, which co-managed the $185 million debt offering for which DLJ was lead manager, predicts the interest coverage ratio will be a "solid" 1.32 times interest expense for fiscal 1988. Joy will have an interest coverage ratio of 1.23 times for fiscal 1989, according to a projection in Kidder's Jan. 14 report.

"Coverage ratios were surprisingly good at 1X (one times) interest for the third quarter," according to the report published by Donaldson, Lufkin & Jenrette. Kidder put the coverage ratio for the company's third quarter of fiscal 1988 at 0.95 times interest.

Interest expense dropped $1.6 million to $18.9 million in the third quarter from $20.5 million (pro forma) in the second quarter, a decline that could have been bigger were it not for the timing of Joy's debt reduction, according to Kidder's report. Fourth-quarter interest expense should be pushed down to $15.5 million, Kidder predicted.

Joy improved its EBITD-to-revenue ratio to 13.4% in the third quarter from 12.6% and 6.5% the two previous quarters, both of which were calculated on a pro forma basis. Kidder projects a ratio of 13.5% in fiscal year 1988 and 14% in fiscal year 1989.

Asset sales and other actions will produce $312 million for the company, according to Joy's third-quarter 10-Q report, which noted $239 million of that already had been received. ■

Who offers your defined contribution plan participants the flexibility of daily telephone transfers between funds?

The same company who offers excellent investment management.

As a leading provider of 401(k) and other defined contribution plan services to more than 1,000 corporations across the country, Fidelity Investments offers a wide range of investment management and client services designed to meet the needs of both you and your employees.

**A Wide Array Of Nationally Known Funds.** With more than $70 billion in assets under management, Fidelity offers a broad choice of professionally managed mutual funds ranging from equity funds like Fidelity Magellan Fund and Fidelity Equity-Income Fund, to money market funds and GIC's. The funds are available on a *no-load* basis to plans with more than 200 eligible employees. And, as market conditions or personal investment objectives change, plan participants have the flexibility to transfer their investments among available mutual funds by telephone on any business day.

**Comprehensive Recordkeeping.** Fidelity's recordkeeping services are designed specifically to reduce your administrative burden. Not only can your employees call us directly to transfer existing balances, they can also redirect future contributions by telephone. Our state of the art system and experienced employee benefit professionals work to ensure timely and accurate reports for both you and your employees.

**Employee Communications Support.** Fidelity will work with you to develop the communication materials needed to support your employees from enrollment through retirement. We'll help you explain your program and the available investment options clearly and effectively. In addition, your employees can call toll-free 24 hours a day, seven days a week and talk with a knowledgeable Fidelity representative about available investment options.

For more information about Fidelity's defined contribution plan services, including fund prospectuses covering management fees, expenses, and applicable sales charges, please call Jeffrey Paster, Corporate Market Manager, at 1-800-345-5033. In Massachusetts call collect 617-570-5692.

*Continued from page 23*

deterioration of credit quality in the financial services sector for the first time, Moody's reported in the Jan. 18 issue of its Bond Survey. The agency cited Chemical Bank's acquisition of Texas American Bancshares and Transamerica Corp.'s purchase of Borg-Warner Acceptance Corp. as examples of restructurings that led to credit downgrades.

Moody's noted a broadening of the ranks of "fallen angels," companies whose ratings slipped below investment grade. Much of the decline in 1987 came from the restructuring of industrial companies, the agency reported, noting deteriorating fundamentals affected a smaller amount of the downgraded debt.

But Moody's also noted substantial improvements in the industrial sector. Last year's 'reborn angels' typified a positive undercurrent for U.S. industrials during 1987, as upgrades in that sector rose to their highest levels since the early 1980s. Moody's attributed the uptick in industrial credit quality to cost efficiencies and improvements in capital structure.

Moody's and Standard & Poor's offered cautious predictions about credit quality in 1988.

Downward rating pressure in 1988 would be felt by money center banks, securities firms, automotive companies, retailers, hospitals, oil companies, high-technology companies and some issuers of structured finance offerings, Moody's said. Improving fundamentals will lead to better credit quality for U.S. producers of steel, food and drugs.

Moody's predictions were based on expectations pointing to slow real growth, an uncertain dollar, a continued trade deficit, deterioration in the economies of the less developed debtor nations, deregulation of the financial markets and oil prices in a range between $14 to $17 a barrel. ■

STATISTICALLY SPEAKING

# Year closes with contrast

## Sectors flip-flop in rankings

By Trudy Ring

KANSAS CITY, Mo. — Stocks sensitive to interest rates were the best performers in the fourth quarter, while basic industry stocks led for 1987, according to DeMarche Associates.

In the bond market, telephone company bonds performed best in the quarter, while Yankee and foreign issues were tops for the year, according to the consulting firm's analysis.

The Standard & Poor's 500 stock index lost 23.4% in price in the quarter, with a gain of just 1.8% for the year. All stock returns are price only.

The basic industry sector was down 24.8% in the quarter, but it was the best of the S&P 500 on the year, gaining 8.4%.

This sector encompasses companies in the automotive, building material, chemical, electrical equipment, metal and transportation industries.

Interest-sensitive stocks lost 19.1% to outperform the market in the quarter; for the year, the sector was the worst performer, down 11.4%. The sector is made up of banks, savings and loans, insurance companies and large gas, electric and telephone utilities.

Energy stocks had the second best return for the quarter, down 21.6%. For the year, the sector gained 5.8%.

This sector comprises domestic and international oil companies and oil service and equipment.

Technology stocks lost 24.1% in the quarter, ranking third, and gained 6.2% for the year, ranking second. This sector covers the aerospace, drug, electronics and office equipment industries.

Stocks related to consumer spending did worst in the quarter, losing 25.5%, while ranking second lowest for the year, with a gain of 1.5%.

Household goods, food and beverage, tobacco, media, textile and retail stocks are in this sector.

The 10 best-performing industries in the quarter were electric utilities, down 7.3%; beverages, down 16.9%; telephone companies, down 17.4%; household products, down 18.3%; steel, down 18.5%; food packaging and processing, down 18.8%; international oil, down 19%; general machinery, down 21.1%; paper, down 21.2%; and forest products, down 21.3%.

The 10 worst-performing industries were oil service and equipment, down 37.6%; airlines, down 34%; building materials, down 31.7%; retailing, down 31.6%; containers, down 31.4%; banks, down 31%; textile products and apparel, down 30.9%; aerospace, down 30.8%; cars and trucks, down 28.2%; and tobacco, down 27.6%.

The top-performing individual stocks of the quarter were **William Wrigley Jr. Co.**, up 11%; **Southern Co.**, up 0.6%; **Comcast Corp.**, unchanged from the previous quarter; **Dominion Resources Inc.**, down 0.9%; **Pennzoil Co.**, down 1.2%; **Computer Associates**, down 1.5%; **Ohio Edison Co.**, down 2.4%; **Computervision Corp.**, down 2.6%; **Southern California Edison Co.**, down 2.8%; and **International Minerals & Chemical Corp.**, down 3.1%.

As rated by quality of the issuing companies, stocks rated as superior had the best performance in the quarter, down 20.5%. For the year, those rated below average gained the most, 5%.

As categorized by growth, stocks with low, stable growth had the best relative performance, down 14.6% in the quarter; and when ranked by yield, high-yielding stocks did best, down 20.2%.

The bond market, as measured by the DeMarche Pension Fund Bond Index of 6,000 issues, had a total return of 5.6% in the quarter, to finish the year up 3.2%.

It had negative returns in the second and third quarters.

Telephone issues were up 7.9% in the quarter to lead all sectors of the market, but they finished last for the year, with a 0.9% return.

Canadian issues were up 7.1% in the quarter, placing second, but next to last for the year, up 1.8%.

Utility bonds returned 7% in the quarter and 2.8% for the year.

Yankee and foreign issues were up 6.3% in the quarter, pushing them to first for the year with 5.6%.

U.S. government bonds gained 5.4% in the quarter and 2.8% on the year, while industrial bonds were up 5.3% for the quarter and 4% for the year.

Financial issues trailed in the fourth quarter with a 4.3% return; for the year, they were up 3.9%.

As ranked by quality, bonds rated AA had the best return in the quarter, with 5.8%; measured by maturity, those with maturities greater than 20 years performed best, gaining 6.9%.

# GIC rates drop during quarter

By Fred Williams

Rates on insurance company guaranteed investment contracts declined slightly in the fourth quarter of 1987, and industry sources view 1988 as a year of uncertainty for the GIC business.

"Rates were down a half to a quarter point in the last quarter, spreads over comparable Treasuries were narrow and we expect them to remain tight at least through the first quarter of 1988," said Doreen Belliveau, vice president at Lamberson Knight Securities, a Short Hills, N.J., GIC brokerage.

Until October, many GIC managers and brokers expected rates to continue to increase, said Mark Hanley, senior vice president at Kominz Co., a Playa del Rey, Calif., investment banking firm.

"Until Oct. 19, most people expected rates would continue to go up. On Oct. 5, a three-year top-of-the-market GIC, a $1 million bullet contract, was at 9.28%; on Oct. 12, it was 9.91% and on Oct. 19, it was 9.96%. On Oct. 26, it was down to 9.16%." From that point, rates declined steadily until hitting bottom Nov. 30 at 8.63% and moving back to 8.71% by the end of the year, he said.

David Rubin, senior director at the Beverly Hills, Calif., investment banking firm of Chambers, Dunhill, Rubin & Co., said GIC rates had a "definite and substantial" decrease in the fourth quarter and "several (insurance) companies were not participating in the traditional year-end bidding because of the stock market crash."

Some GIC managers expect the market to contract in 1988 and look for GIC capacity pressures to build.

"My real concern is looking forward into 1988. Given the overriding conservatism of the insurance companies, supply problems and a volume increase with people moving to GICs, I think things will tighten even more and we could have a real capacity problem by the fourth quarter of 1988," said Mike Hoover, GIC portfolio manager at Capitoline Investment Services Inc., Richmond, Va.

"A lot depends on how the economy goes and the type and availability of investments to insurance companies for the GIC proceeds.

"In terms of 1988 market characteristics, the traditional mainline (insurance) carrier, the stronger carriers, are very conservative in terms of their pricing now. Some smaller or newer carriers may have spreads which are much higher than the comparable Treasuries. That situation creates a greater need to understand what's going on with that group. . . . If a company is offering 50 to 75 basis points above everyone else, that should cause you to look a lot more carefully at their ability to underwrite and invest. They could be shaving their risk charges or using junk paper."

The effects of the equity market crash could linger in the GIC market, said Gene Gochenour, president of GIC Inc., Beaverton, Ore.

He said spreads might continue to narrow between GICs and comparable Treasury instruments and investors might quit shopping spreads as much and look for stability with GIC investments from carriers capable of offering lower volatility investments for their fixed-income portfolios.

Lamberson Knight and GIC Inc. provide insurance company rate quotations on representative five-year, single deposit, simple-interest, $1 million GICs as follows:

- Aetna Life & Casualty Co., Hartford, Conn.; Dec. 31, no quote; Sept. 30, 9.41%.
- Allstate Life Insurance Cos., Northbrook, Ill.; no quote; 9.71%.
- American United Life Insurance Co., Indianapolis; 8.7%; 9.34%.
- Bankers Life Assurance Co., Des Moines, Iowa; 8.53%; 9.05%.
- Canada Life Assurance Co., Toronto; no quote; 9.85%.
- CNA Insurance Co., Chicago; 8.54%; 9.44%.
- Confederation Life Insurance Co., Toronto; 9.3%; 9.69%.
- Connecticut Mutual Life Insurance Co., Hartford; 8.56%; 9.56%.
- Crown Life Insurance Co., Toronto; 8.77%; 9.71%.
- General American Life Insurance Co., St. Louis; no quote; no quote.
- Great West Life Assurance Co., Denver; 8.59%; 9.61%.
- Hartford Insurance Group, Hartford, Conn.; 8.85%; 9.76%.
- Home Life Insurance Co., New York; 8.64%; 9.56%.
- John Hancock Mutual Life Insurance Co., Boston; 8.53%; 9.43%.
- Life Insurance Co. of Georgia, Atlanta; 8.95%; 9.4%.
- Life Insurance Co. of Virginia, Richmond; 8.48%; 9.53%.
- Massachusetts Mutual Life Insurance Co., Springfield; 8.62%; 9.64%.
- Minnesota Mutual Life Insurance Co., St. Paul; 9.31%; 9.94%.
- Mutual Benefit Life Insurance Co., Newark, N.J.; 8.75%; 9.7%.
- Mutual of New York, New York; 8.54%; 9.56%.
- New England Mutual Life Insurance Co., Boston; 8.66%; 9.51%.
- New York Life Insurance Co., New York; 8.8%; 9.75%.
- Northwestern National Life Insurance Co., Minneapolis; no quote; 9.65%.
- Ohio National Life Insurance Co., Cincinnati; 9.22%; 9.77%.
- Pacific Mutual Life Insurance Co., Newport Beach, Calif.; 8.48%; 9.46%.
- Pan American Life Insurance Co., New Orleans; 8.89%; 9.74%.
- Penn Mutual Life Insurance Co., Philadelphia; 9.12%; 9.87%.
- Phoenix Mutual Life Insurance Co., Hartford, Conn.; 8.94%; 9.74%.
- Provident Mutual Life Insurance Co., Philadelphia; no quote; 9.46%.
- Provident National Assurance Co., Chattanooga, Tenn.; no quote; 9.57%.
- SAFECO Corp., Seattle; no quote; 9.6%.
- Southwestern Life Insurance Co., Dallas; 8.75%; 10.1%.
- State Mutual of America, Worchester, Mass.; 8.65%; 9.6%.
- Union Central Life Insurance Co., Cincinnati; 8.83%; 9.83%.

William M. Mercer-Meidinger-Hansen Asset Planning, Dallas, also surveys insurance companies for rate quotations but does not identify the companies. A summary of various bullet GICs for December is as follows:

- Three year, $1 million, compound: high, 9.17%; low, 7.76%; average, 8.39%.
- Three-year, $1 million, simple: high, 9%; low, 7.64%; average, 8.36%.
- Five-year, $1 million, compound: high, 9.83%; low, 8.03%; average, 8.99%.
- Five-year, $1 million, simple: high, 9.9%; low, 8.01%; average, 8.95%.
- Seven-year, $1 million, compound: high, 10.08%; low, 8.28%; average, 9.34%.
- Seven-year, $1 million, simple: high, 10.23%; low, 8.55%; average, 9.25%.
- Three-year, $5 million, compound: high, 9.02%; low 7.92%; average, 8.46%.
- Three-year, $5 million, simple: high, 8.91%; low, 7.82%; average, 8.4%.
- Five-year, $5 million, compound: high, 9.86%; low, 8.12%; average, 9.05%.
- Five-year, $5 million, simple: high, 9.93%; low, 8.13%; average, 8.99%.
- Seven-year, $5 million, compound: high, 10.1%; low, 8.64%; average, 9.4%.
- Seven-year, $5 million, simple: high, 10.25%; low, 8.64%; average, 9.27%.

Dietrich & Associates, a GIC brokerage firm in Blue Bell, Pa., provided the following rate spread data between a $1 million five-year, simple interest GIC and the average T-bill of the same maturity for the fourth quarter:

- Oct. 7: GIC, 10.12%; T-bill, 9.35%.
- Nov. 9: GIC, 9.05%; T-bill, 8.33%.
- Dec. 9: GIC, 9.28%; T-bill, 8.59%.

The same information for the first three quarters was:

- March 2: GIC, 8.2%; T-bill, 6.79%.
- June 2: GIC, 9.05%, T-bill, 8.19%.
- Sept. 2: GIC, 9.5%, T-bill, 8.59%.

## Multiple Markets Index

The Multiple Markets Index is a benchmark for total portfolio returns. It is composed of eight asset classes used by retirement plan executives; it is calibrated to reflect the same degree of risk of the typical pension portfolio; it uses passive fixed policy weights; and it represents the individual asset classes by the broadest and most complete market return data available.

| Weights | |

# Bond assets

*Continued from page 4*
$516 million was indexed. Much of the remainder was in active short-term investment strategies using options or futures, said Carol Kolakowski, manager-marketing support services.

Another of the top 10 with a portion indexed was Mellon Bond Associates, Pittsburgh, which had $165 million of its $1.2 billion in new business indexed.

One of the major active managers among the top 10 large firms was Discount Corp. of New York Advisers, which won nearly $1.6 billion in new bond business. Officials there attributed this to the consistency of their strategy, which shifts maturities based on interest rate anticipation, and continuity of top personnel.

"We do what we say we're going to do," said Barbara Fiorito, vice president and head of marketing. She also noted the firm's two top investment officers — Patricia de Blank Klink, president, and Doug Taylor, senior vice president — have been there since the firm's inception in 1978.

Continuity of top personnel and good returns helped another active firm in the top 10, Fischer, Francis, Trees & Watts Inc., New York, which had $1 billion in new business. Using a various factors to select high-grade bonds, the firm aims to outperform each account's benchmark by at least one percentage point, said John Watts, managing director. "People are increasingly realizing that long-term records of doing that are rare," he said.

Among medium-size managers — those with $250 million to $1 billion in total tax-exempt assets — the top gainer was an indexer, Capstone Asset Management Co., Houston, with $291 million in new bond business, all indexed.

Next was Daniel Breen & Co., Houston, with $225 million. The 4-year-old firm has been known primarily as an equity manager, but is starting to get recognition for its fixed-income management because of performance, said Ed McCullough, senior vice president.

"We have had exceptional performance since the inception of our firm," he said. In the four years ended Dec. 31, the firm's bond accounts had a compound annual return of 15.3%, compared with 13.6% for the Salomon Brothers Broad Investment Grade bond index, he said.

Also, he said, the firm has an easily understandable approach to bonds, focusing on interest rate anticipation and adjusting the portfolio's maturity and duration to match the outlook.

Another firm emphasizing Treasuries was far and away the winner among small firms. Consistent Asset Management Co., Wilmington, Del., founded by a group of former Wilmington Trust Co. professionals, won $150 million in its first full year in business.

Consistent uses quantitative analysis to time the Treasury market, and in doing so has carved itself a niche, said David Umbs, president. It is similar to the approach used when the principals were at Wilmington Trust, but they have come up with some new formulas since they went out on their own, he said. Their track record at the trust company helped bring in business, too, he said. ■

# Passive style

*Continued from page 4*
respondents reported $48.5 billion in new equity business, with 60.8% indexed, and $24.3 billion in new bond business, with 24.3% indexed. International managers reported $4.9 billion in new international equity business during 1986.

An indication of the continued popularity of international investing is the presence of international managers among those with the most net growth in their respective size categories.

Among medium-size managers — those with $250 million to $1 billion under management — the top 10 net gainers included four international or global managers: Oechsle International Advisors, Boston, with a net gain of $299 million; Julius Baer Investment Management Inc., New York, with $269 million; Posthorn Global Asset Management, London, with $260 million; and Beutel, Goodman International PLC, London, with $251 million.

Among small managers — those with less than $250 million under management — international representatives in the top 10 were Boston International Advisors, with $144 million in net growth, and SBC Portfolio Management International Inc., New York, with $85 million.

New real estate business among managers surveyed hit $10.9 billion, a substantial increase from the $6.9 billion reported a year ago. This was due to several factors, including maintaining target allocations and participation in large and direct deals.

There were two real estate specialists among the top 10 large managers — those with more than $1 billion under management — for net growth: JMB Institutional Realty Corp., Chicago, with $4.4 billion, and Copley Real Estate Advisors, Boston, with $3.3 billion.

GICs accounted for $21.8 billion of new business, up from $17.2 billion during 1986; GIC managers said they expect continued growth, especially from defined contribution plans.

Two of the top 10 large firms for net growth benefited greatly from GIC investments. Travelers Cos., Hartford, Conn., with net growth of $5.2 billion, had $2.7 billion of this in GICs. Prudential Asset Management Group, Newark, N.J., with net growth of $3.8 billion, had nearly $4.6 billion in GICs.

Also, the biggest net gainer, Bankers Trust Co. — Investment Management Group, New York, with $13.3 billion in net growth, had $960 million flow into its managed GIC fund during the first 11 months of 1987. The fund was started late in 1986.

Portfolio insurance attracted $5.8 billion in new business, less than half of the $12.7 billion it gained during 1986.

Since the October market plunge, when many portfolio insurance programs failed to provide the promised level of protection, numerous pension funds have stopped using the strategy. The Scorecard figures for individual asset classes, however, do not reflect withdrawals. ■

# Equity basics

*Continued from page 4*
performance records.

Such a record helped Sun Banks Investment Management Group, Orlando, Fla., place sixth among large firms in new equity business, with nearly $1.1 billion.

"People really cannot ignore our record," said Anthony R. Gray, president. "Whether it's one, three, five or 10 years, it's up in the first or second percentile."

In the Pensions & Investments' Performance Evaluation Report for periods ended Dec. 31, Sun Banks' commingled equity fund topped the Standard & Poor's 500 index and ranked in the top percentile for the one-, three-, five- and 10-year periods, with returns of 16.3%; a compound annual 31.4%; a compound annual 28.4%; and a compound annual 22.1%, respectively. In three of those periods, Sun Banks' portfolio was the leading fund.

Seventh among large firms was a quantitative and relatively new firm, Rosenberg Institutional Equity Management, Orinda, Calif., with $1.06 billion in new equity business.

Several managers using quantitative techniques were among the top midsize and small firms; the quants included Renaissance Investment Management Inc., Cincinnati; Disciplined Investment Advisors Inc., Evanston, Ill.; Eagle Asset Management Inc., St. Petersburg, Fla.; WEDGE Capital Management, Charlotte, N.C.; and Aronson & Fogler, Philadelphia.

The leading gainer of equity assets among those managing $250 million to $1 billion was one combining quantitative and fundamental analysis. Columbus Circle Investors Corp., New York, won $328 million in new equity business.

The firm uses its analysis to find industries and stocks performing beyond expectations, said Win Headley, vice president. The firm's goal is to outperform the S&P 500 by at least 200 basis points a year; during 1987, the firm's equity composite returned 9.8% to the S&P 500's 5.2%.

Ranking second among midsize firms was an indexer, Capstone Asset Management Co., Houston, with $324 million in new equity business. A group of principals of Tenneco Financial Services bought the subsidiary from Tenneco Inc. to set up Capstone; they took some of the parent company's pension assets with them to manage.

Despite all the interest in indexed and quantitative strategies, the top gainer among small firms was a highly fundamental manager, Ariel Capital Management Inc., Chicago, which emphasizes high-quality, undervalued companies that have been misunderstood or ignored by the market. Ariel brought in $118 million in new assets — so much that it cut off marketing efforts. ■

# LTV pension

*Continued from page 1*
provided to the committee of unsecured creditors in LTV's bankruptcy action indicating LTV could support the plans if restored. LTV has committed to making contributions of more than $90 million annually to fund the follow-on defined contribution plan. (*Pensions & Investment Age*, Sept. 21.)

"These contributions obviously could be used instead to satisfy minimum funding obligations under the restored plans," the PBGC claims in its motion. "Assuming that they would be so used and that LTV Steel obtained funding waivers for the restored plans for the 1984-'86 plan years, the total prospective annual cost of funding the restored plans would be approximately $260 million.

"Thus, the incremental effect of full restoration, based on company figures regarding the cost of the follow-on plans, is $170 million. The PBGC believes that the effect may be even less." The total could be less than $120 million, according to the motion.

A PBGC official said LTV's current commitment to its defined contribution plan, included in a collective bargaining agreement with the United Steelworkers Union, is nearly $200 million.

The wording in the PBGC motion and comments made by PBGC and LTV representatives aren't likely to ease the tensions over the deepening legal and financial quagmire regarding the disposition of LTV's pension plans following the company's bankruptcy filing.

The opening paragraph of the filing claims LTV "promised its workers pensions, but it did not pay for them," and accuses the company of lacking concern for its retirees and using the federal pension insurance program to provide LTV with a competitive advantage by unloading its pension liabilities.

LTV's steel division has shown improved cash flow, sales, earnings and net and operating income and decreases in operating costs and expenses through the first six months of 1987. Not cited in the motion was third-quarter operating income from LTV's steel operations that amounted to $82.7 million, up $56 million from the same period in 1986. LTV's steel division is expected to post an operating profit for the fourth quarter of 1987.

Royal Dellinger, deputy PBGC director, said the filing points out LTV is using the federal pension insurance program "to take unfair advantage of other steelmakers" and if LTV succeeds in dumping its nearly $2 billion in pension liabilities on the PBGC, other steelmakers would consider similar steps to stay competitive.

"The pension insurance program was not established to provide interim financing or bailouts to employers like LTV Steel or to assist such employers to gain a competitive edge in their industries. Pension plans therefore may not be sacrificed first in bankruptcy solely to ease a reorganization or to assure 100% recovery to commercial and other creditors," according to the petition.

"Declaring restoration illegal in this case could mean, in practice, that the PBGC could never restore the pension plan of a Chapter 11 debtor, even though the debtor was operating successfully and providing ongoing benefits for its employees . . . it could become routine for employers to file for bankruptcy primarily to escape their pension benefit obligations."

A PBGC spokeswoman said the agency is seeking summary judgment because "the PBGC believes there are no material facts in dispute. . . . Also, it is a way to get a quick resolution of the lawsuit so retires will know what their entitlements are."

LTV attorney Frank Cummings said he is "distressed" by the tone of the filing as well as its content.

"They are saying 'there aren't any issues of fact and you should award us a victory.' . . . They not only said there aren't any issues of fact but that no one is entitled to discover if there are any facts. Is this agency of government so above the law that it can do whatever it pleases? If you boil it all down, what they are saying is that if they decide to do it, it must be legal," Mr. Cummings said.

"They say 'we did it and that makes it lawful,' the king can do no wrong. I respond to that by saying if the king doesn't obey the law there is no law. This case really raises that issue, whether the king can do no wrong. They simply threw the law back into the employer's face. They believe they can ride roughshod over everyone."

Mr. Cummings said the federal bankruptcy code "prevents anyone from bringing any action and taking property from the bankruptcy estate. The bankruptcy code says if you have a claim, make it. They (PBGC) have attempted an end run and are attempting to advance their financial position outside the bankruptcy court," he said.

LTV has until Feb. 22 to respond to the PBGC motion. ■

# Issuers turn

*Continued from page 3*
spurred insurance companies and other private placement market players to compete more strongly.

Braderick Harper, supervisor-financial planning at American Information Technologies Corp., Chicago, said: "We do private placements to some degree. I am interested in it as a financing vehicle."

In recent years, the private placement market experienced sometimes wrenching changes that resulted in a shrinkage of total privately placed volume.

Private market dealmakers witnessed keen competition for the traditional private placement product — straight debt financing — especially from the public junk market and products like medium-term notes.

The advent of shelf registration also hurt the private market; no longer were private placements the only means of doing a deal quickly and relatively less costly.

The effects of junk bonds and shelf registration on "private financing have been revolutionary, changing in a short period of time both the preferences of investors and the types of deals which get done as private placements," said David C. Sauvage, senior vice president and co-head of private placements at Shearson Lehman Hutton Inc.

While investment bankers acknowledge these products did cut into their market, Mr. Sauvage said they also have had some beneficial effects — "a certain credibility to the whole idea of investing in lesser credits."

During the past two to three years, private buyers willing to assume more risk started scouting for new investments that could generate the hefty returns they wanted. These investors set their sights on what John D. Miller, executive vice president at Equitable Capital Management Corp., New York, which has invested in excess of $10 billion in private placements, calls "enhanced return investments" such as leveraged buy-outs and corporate restructurings. He noted private investors have been lining up to get pieces of these deals.

"It's sure competitive" among buyers, said James Gleaves, vice president, American General Corp., Houston, whose private placement investments grew to more than $570 million from nothing three years ago. "We're seeing more pension funds in LBOs, and the Japanese are very aggressive. We are increasing our participation. And we'll be emphasizing it even more."

**The private placement boom***

| Year | No. of issues | Amount ($ bils.) |
|---|---|---|
| 1982 | 1,171 | 24.3 |
| 1983 | 1,596 | 35.6 |
| 1984 | 1,789 | 53.3 |
| 1985 | 2,240 | 73.1 |
| 1986 | 2,648 | 1,234.0 |
| 1987** | 1,233 | 58.4 |

*Private placement data include all private debt, equity and preferred offerings as well as mortgage-related investments.
**Through June 30
Source: IDD Information Services Inc.

Nathaniel Coolidge, senior vice president at John Hancock Mutual Life Insurance Co., Boston, said Hancock, which manages about $10 billion in assets, has 20 different portfolios full of private placement investments, all with different aims. "Some take bite-size deals, others take big bites. We have expanded our parameters to look at everything from AAA to B to senior debt to private equity, maturities as short as one year to as long as 25 years and invest $1 million to $100 million," he said.

Robert Morris, vice president and general manager, General Electric Investment Corp., which manages General Electric Co.'s $27.3 billion pension fund, noted GEIC's $1.4 billion portfolio of equity-linked private placements has "gone into riskier areas like mezzanine (financing) and equity layers of deals."

Merrill Lynch's Mr. Greene said the Japanese also have proven important competitors for traditional private buyers. "They've been buyers of everything from the mezzanine portion of leveraged buy-outs to the debt portion of leveraged leases. They have been very aggressive in their pricing and have tended to snap entire very attractive deals away from domestic buyers," he said.

To attract new issuers and respond to changing investor demands, private placement professionals have moved rapidly to replace their traditional private placement deal flow with a proliferation of "new age" investment vehicles. They include leveraged buy-outs and leveraged buy-out fund investments, as well as straight equity deals and debt with equity kickers.

"The market for private equity is expanding, said Scott Katzmann, vice president, First Boston Corp., New York. "We've done lots of private equity deals. And larger private equity placements are becoming more commonplace."

Other attractive private placement investments include real estate financing, project financing, and special purpose funds such as Lazard Freres & Co.'s white knight fund or Trust Co. of the West's equity kicker fund.

Investment bankers also are loosening covenants and trying to simplify the structures of private placements to make them more like public market transactions.

Since Oct. 19, private placement professionals say they have received hundreds of telephone calls from companies. Many have never tried the private market before, so the private placement specialists are trying to capitalize on the dearth of public equity offerings and limited opportunities in the public debt market.

## LATE NEWS

*Continued from page 2*
$94,023 this year, up from $90,000, and employees will be able to defer a maximum of $7,313 into their 401(k) plans, up from $7,000, the Internal Revenue Service announced late last week.

### *Late money movers*

● NEW YORK — The $1.4 billion ITT Corp. pension fund has increased allocations to equity accounts managed by American Fund Advisors and GAMCO Investors Inc. and dropped Fred Alger Management Inc., according to Edwin J. Ehrlich, director of pension fund trusts.

He would not disclose the amount of the shift. All three firms are based in New York.

● LOUISVILLE, Ky. — The $35 million Louisville Policemen's Retirement Fund hired three investment managers, dropped two and reduced the allocation to a third, said William T. Crossfield, fund administrator.

Each manager hired received about $5 million. They are: Todd Investment Advisors Inc., Louisville, Ky., for fixed income; Schaenen Wood & Associates Inc., New York, equity; and Killian Asset Management Corp., Barrington, Ill., fixed income.

Released were Investment and Capital Management Corp., Rolling Meadows, Ill., which had run an $8.7 million fixed-income portfolio, and First Kentucky Trust Co., Louisville, which had managed a $2 million balanced portfolio. About $4 million was taken from Stock Yards Bank & Trust Co., Louisville, which still runs $19.6 million for the fund. Mr. Crossfield said the changes were made for style reasons.

# N.Y. strategy

*Continued from page 3*
cisco, said the strategy focuses "on the major capabilities" of its managers and could avoid confusion of several managers scouting for the same properties.

He added, however, that using one manager per property type requires more time to find properties and could cost the fund the investment diversification several managers would provide.

"There's nothing incorrect in doing it this way, but we prefer our clients to have a more diversified manager group," said Paul Saylor, principal of Institutional Property Consultants Inc., Atlanta. He said Ellis and TCW are good choices for their respective property types, "but maybe more than two managers will be needed to generate the kind of of deals needed to get this much money deployed."

The investments are part of a five-year plan to increase New York's equity real estate portfolio to $2.1 billion or 6% of total assets from the fund's current allocation of less than 1%.

William Ramseyer, president of Pension Realty Advisors, San Francisco, the fund's consultant, said his office recommended Ellis and TCW because of their expertise in the respective property types.

But others criticized the New York fund officials' decision to select managers for specific property types in direct investing.

"My feeling is you're better served with several managers because you increase your chances of finding" property, said Peter Jeans, real estate investment officer for the $9.2 billion Alaska Permanent Fund Corp., Juneau. The Permanent Fund has $450 million in real estate, of which about 50% is in direct ownership.

A public fund real estate officer, who asked not to be identified, said he wonders if just one manager can find all the acquisitions needed within one property type in today's tight institutional-grade property market.

Mr. Ramseyer said hiring managers based on property specification "creates more focus" in the acquisition stage than having money divided among several managers each competing for the same property type.

Ellis has about 80% of its $1.4 billion in tax-exempt assets invested in offices and retail; TCW had about 46% of its $1.4 billion of tax-exempt assets invested in industrial as of June 30.

The commitments to Ellis and, possibly, TCW will come from the $1.4 billion allocated to direct investing. The remaining $700 million of the $2.1 billion target allocation will be invested in commingled funds.

Mr. Ramseyer said management fees charged to the New York fund will be less than usual by hiring managers of specific property types, but declined to be more specific. ■

# Proxy guidelines aired

## Ultimate stock value is key

By Nicky Robertshaw

WASHINGTON — The ultimate economic value of the stock must be the primary consideration when fiduciaries vote their proxies, a key Labor Department official has decreed.

The long-awaited stance on how institutional shareholders must vote proxies to meet their fiduciary obligations under the Employee Retirement Income Security Act will be explained in more detail in a letter to a company whose proxy-voting procedures have been under investigation by the Department of Labor. The letter is expected to be released this week, said David M. Walker, assistant secretary of labor.

Mr. Walker, who referred to the letter during a meeting of the United Shareholders Association in Washington, would not name the company, but sources said Mobil Oil Corp., New York, which allegedly placed undue pressure on Citicorp Investment Management Inc., New York, in voting proxies, and Avon Products Inc., New York, both are under investigation by the Labor Department.

In an interview, Mr. Walker said the letter will involve two key policy points:

- It will reinforce the importance of voting with the ultimate economic value of the stock as a priority — even if it conflicts with the interests of management, labor or a short-term premium per share available through a tender offer.

Fiduciaries voting proxies must make an independent analysis of the situation, and must be able to document the vote and the reasons for the decision, he said.

- It will clarify the Labor Department's position that named fiduciaries who farm out investment management decisions but retain proxy voting power still are liable for ERISA violations resulting from those proxy votes. That separation of voting rights from investment decisions also must be spelled out in plan documents, Mr. Walker said.

When an investment manager votes a proxy, he or she must ignore any pressure or direction from executives of the plan sponsor, he added.

"The department's statement will help put a stop to the kinds of pressures corporate managements have applied to independent investment managers, but to make this policy credible, the department will have to

# Banks expand financing role ...

By Marcia Parker

More corporate financial executives are listening when commercial bankers talk about the investment banking services they can deliver.

Chrysler Corp., Ogden Corp., Avon Corp., Armco Inc. and Mack Truck are among the companies that have accepted the concept of commercial bankers providing investment banking services.

The bankers, for their part, are trying to build on the toehold they've established in the investment banking business and compete head-to-head with their Wall Street counterparts.

"The franchise that Wall Street has is still intact, but not for long," said Frederick W. Zuckerman, vice president and treasurer at Chrysler, Highland Park, Mich. "I do not perceive the commercial banks are yet in the big leagues, but in three to five years they will be."

Corporate finance chiefs at many companies say that while commercial banks have a long way to go — and their progress largely depends on whether regulatory shackles are released — several banks have made significant inroads into the investment banking business, serving as private placement agents for securities and, to a lesser extent, advisers on mergers, acquisitions and divestitures. Those banks include Bankers Trust Co., J.P. Morgan & Co., Citicorp and Chase Manhattan Bank, all in New York.

***Pensions & Investment Age*'s special look at commercial bankers' inroads into investment banking continues in Financing — Page 35.**

Not withstanding the regulatory barriers and the uncertain outlook for future regulation, corporate financial executives say more commercial bankers are offering innovative ideas well tailored to the corporations' financing needs.

Financial officers have no plans to abandon their investment bankers, but several companies have either begun to use commercial banks to handle more than just their borrowing needs or are thinking about it, although most still rely on investment bankers for advice on mergers and acquisitions and sizable deals.

"We see a lot more of the banks in here," said Maria Monet, chief financial officer at Ogden, New York. "In the past year I've seen a much more aggressive push. The banks are coming in with ideas based on their familiarity from the lending side that are much more targeted to-

# ... as laws are eased

By Brad Rudin

Some commercial banks are poised to attempt to take underwriting business from their Wall Street rivals March 1, but others, concerned about restrictions on their new powers, are taking a go-slow approach.

The congressionally imposed moratorium on expanded securities powers for banks expires next month, and a federal appeals court decision this month pierced a gaping hole in the legal wall dividing investment and commercial banking.

The combination of the two means commercial banks will get the expanded underwriting powers granted to them by the Federal Reserve Board in April and May 1987.

Banks had been unable to use those powers pending a suit by the Securities Industry Association against the Fed.

The 2nd U.S. Circuit Court of Appeals Feb. 8 upheld the Fed's grant of expanded underwriting powers to seven money center commercial banks.

Commercial bankers at the big money center institutions say they have the resources to pose a serious competitive threat to investment bankers.

But expanded securities powers could have little practical effect, said Richard H. Jenrette, chairman of Donaldson, Lufkin & Jenrette Securities Corp. and the Equitable Life Assurance Society of the United States, the parent of the securities unit.

Mr. Jenrette believes capital constraints likely would inhibit the ability of many banks to make a major move.

The planned or completed sale of several bank money management units suggests commercial banks might not be willing to make a big commitment to the securities industry, he said.

## LATE NEWS

### Fund adds foreign stock, realty

RESEARCH TRIANGLE PARK, N.C. — Burroughs Wellcome Co., the pharmaceutical manufacturer, has restructured its $220 million in pension investments to include non-U.S. equities and real estate allocations.

The revamped asset program should take effect some time in March, when all contracts are signed and terminated portfolios are liquidated, said Glenn Andrews, assistant vice president-finance.

The new asset mix shows a slight increase in domestic equities, less in domestic fixed income, and no cash category, although individual managers have latitude in holding cash.

The new mix is 58% domestic equities; 10% non-U.S. equities; 12% real estate; and 20% domestic fixed income. As of Dec. 31, the asset mix was 56% equities, 26% fixed-income; and 18% cash.

The additions of international and real estate resulted from "some capital market assumptions we made . . . using expected returns from (the Morgan Stanley Capital International Europe Australia Far East index) and real estate markets," Mr. Andrews said. "They seemed to provide an improved risk/return profile for our portfolio."

Bankers Trust Co. — Investment Management Group, New York, was hired to manage non-U.S. equities and The Phoenix, Hartford, Conn., will manage the real estate investments. Thompson, Siegel & Walmsley Inc., Richmond, Va.; Frontier Capital Management, Boston; and Tweedy, Browne Inc., New York, will continue to manage domestic equities. Criterion Group, Houston, will continue as the fixed-income manager.

One manager was terminated, but Mr. Andrews would not name the firm. According to the 1988 Money Market Directory of Pension Funds, the fourth equity manager was Spears, Benzak, Solomon and Farrell Inc., New York. Executives of the firm did not return phone calls by press time.

Callan Associates Inc. offices in San Francisco and Atlanta ran the asset/liability models, manager performance evaluations and manager optimization.

### Super Valu picks master trustee

MINNEAPOLIS — Super Valu Stores Inc. has hired Bankers Trust Co., New York, as master trustee for retirement plans with total assets of $80 million, said Gloria Werner, benefits manager.

The bank replaces First Bank Minneapolis. The company became dissatisfied with First Bank after it had shifted its trust department to St. Paul without notice, Ms. Werner said.

Bankers Trust will provide master trustee services for the Super Valu Stores Inc. Retirement Plan and Pretax Savings and Profit Sharing Plan, and the respective profit-sharing plans of Super Valu Stores' retail division, which include Lewis Grocer, Ryans Division and Charley Brothers.

### New Orleans teachers taps NCM

NEW ORLEANS — The United Teachers of New Orleans has hired NCM Capital Management Group, Durham, N.C., to manage the union's $8.5 million health and welfare trust fund in a fixed-income account, according to Fred Moore, fund coordinator.

Mr. Moore said the Taft-Hartley fund was established to provide supplemental benefits for New Orleans public school employees. The assets had been managed internally before NCM was retained on a two-year contract, said Mr. Moore.

NCM was hired after interviews with eight investment firms, he said. The search was conducted internally.

## HIGHLIGHTS

### SEC scrutinizes futures — P. 33

The Securities and Exchange Commission has issued its own report on the October market drop, and zeroes in on stock-index futures and other futures-related trading strategies. The SEC report, while saying that no single factor caused the crash, did not absolve futures-based trading strategies, believing the strategies "were a significant factor in accelerating and exacerbating" the October market free fall.

For your firm to be profiled in the May 23 directory, please return the questionnaire by Feb. 26 to Christine Philip, directory coordinator, *Pensions & Investment Age*, 740 N. Rush St., Chicago, Ill. 60611-2590.

If you have any questions, or have not received a questionnaire, please contact Ms. Philip at (312) 649-5217.

# Boston Co. axes oil and gas group

By Fred Williams

BOSTON — The Boston Co. has phased out its energy investment group, considered one of the leading pension fund oil and gas investment managers.

"Energy Advisors got off to a good start," said Robert Mainer, senior vice president at the Boston Co. who oversaw the dissolving of the unit. "But due to the vicissitudes of the energy business and some uncertainty by pension plan sponsors about oil and gas . . . (it) never really got off the ground, assets under management never became significant and it quickly became apparent it was not in the mainstream of Boston Co.'s area of business."

Doug Suliman, president of Boston Co. Energy Advisors since 1985, resigned in September and the next month joined First Reserve Corp., Greenwich, Conn., one of Boston Co.'s competitors. He is serving as a consultant to Boston Co. to ease the transfer of assets to other investment firms. Most of the remaining staff members have been transferred to other positions in Boston Co.'s banking operation.

Boston Co. Energy Advisors was formed in 1981 and, at its peak in 1985, had about $100 million under management. When the decision was made early last year to phase out the division, it had between $40 million and $50 million under management from five clients, Mr. Suliman said.

"When they approached me with the idea that they were getting out of the business, I could appreciate the decision," he said. "This is a boutique investment and didn't fit well with a large corporate environment. It was easy for me to see it was a non-strategic investment area for them. I wanted to continue in the business in some form and talked to a dozen or so prospective successors and settled on First Reserve."

Boston Co. Energy's investments were designed to generate

**Advo Systems, whose warehouse is shown above, is one small-capitalization holding of The LTV Corp. Despite recent gains, pension funds are not jumping on the small-cap bandwagon.**

# Small-cap 'rebound' doubted

By Fred Williams

Small-capitalization stocks, outperforming the market since Jan. 1, might be poised for a rebound after five years of lackluster performance, but interest on the part of pension plan executives isn't.

Some investment consultants have noticed increased interest in small-cap investment managers, while others say pension officials are growing more cautious about the equity market and are raising cash or investing in fixed-income instruments.

Through mid-February the NASDAQ composite index and the Russell 2000, two measures of small-capitalization stock performance, were up 5.7% and 7.3% respectively, while the Dow Jones industrial average was up only 1.6% and the Standard & Poor's 500 stock index was up 3.6%.

Investment strategists at investment management firms have started calling attention to the small-cap sector, believing it to be undervalued and ready for a strong year.

"Our sector has significantly underperformed relative to large-capitalization stocks, but that is changing," said Robert Kern, executive vice president of Morgan Grenfell Capital Management Inc., New York, and leader of the Morgan Grenfell small-cap equities team. "Pension plan sponsors are looking at their asset allocation models and concluding the small-cap sector is attractive now. They are at historic valuations, lows we haven't seen since the early 1960s."

Morgan Grenfell's definition of small-cap covers any company with less than $500 million in market capitalization, but the firm focuses on companies between $50 million and $500 million, of which there are about 2,000 publicly traded issues.

Morgan Grenfell holds substantial positions in such small-cap issues as **J.M. Smucker Co.**, **Intermec Inc.**, **Electromagnetic Sciences Inc.** and

# No boundaries

## Venture capitalists look overseas

By Trudy Ring

Venture capital investments with an international flavor are attracting U.S. investors, but some questions remain.

Among the investors are the Cincinnati Bell Inc. and United Technologies Corp. pension funds, the Rockefeller Foundation, the Yale University endowment fund and, on behalf of clients, such money management firms as Alliance Capital Management Corp., Abbott Capital Management Inc. and Aetna Life & Casualty Co.

Although concerns over currency fluctuations, track records, public markets and communication make institutions hesitant to invest in foreign ventures, they are providing capital to young U.S. companies with foreign ties.

## P&I changes staff duties

*Pensions & Investment Age* has made several staff changes.

In Chicago, Carol Wiley, formerly directory coordinator, has been named staff reporter. Christine Philip has been hired to assume Ms. Wiley's duties.

In New York, Bureau Chief Joel Chernoff has been named senior editor and Brad Rudin, formerly a staff reporter, has been named senior reporter.

Ms. Wiley joined *P&I Age* in March 1986. She previously had been a reporter for the Chicago Tribune and several other daily newspapers in Illinois, and worked as an organizer and publicity writer for a community college and several non-profit organizations.

Ms. Philip worked in London for seven years, serving as client services coordinator for the Yankee Group, a telecommunications/computer research analysis firm.

Since returning to the United States, she has worked with Fortune 100 and 500 clients providing proprietary market research studies and information services.

Ms. Philip received her bachelor's degree in English literature and creative writing from Knox College and the University of Durham, England. She has done graduate-level work at Pennsylvania State University.

The changes in the New York staff reflecting the publication's expanded commitment to international investment and corporate finance coverage.

Mr. Chernoff will develop and oversee a network of foreign-based correspondents, as well as report on international and domestic developments affecting U.S. and foreign institutional investors. He joined the publication in May 1982.

Mr. Rudin, who joined *P&I Age* in May 1986, covers corporate finance with Associate Editor Marcia Parker. Before joining the publication, he covered local government for newspapers in New Jersey. ■

### CORRECTIONS & CLARIFICATIONS

- **American Fund Advisors Inc.** was omitted inadvertently from the list of equity managers in a profile of ITT Corp.'s employee benefit assets Jan. 25. The firm has been managing a portion of ITT's equities since March 1.
- **Unisys Corp.**'s defined benefit assets after the October market drop totaled $2.561 billion, a drop of 15.7% from the assets as of Sept. 30. It was incorrectly reported Jan. 25 that the drop represented total employee benefit assets.
- **Amivest Capital Management** manages equities for the **IAM National Pension Fund**. The firm was identified incorrectly in the Jan. 25 issue.
- The South Africa-free index of **Statistically Speaking** in the Feb. 8 issue contained an error in the Standard & Poor's 500 number. The year-end figure is 5.23%.

# Bransford back in consulting

By Joel Chernoff

ATLANTA — Roger Bransford is back in the investment management consulting business — again.

One of the best-known consultants in the business, Mr. Bransford has joined Towers, Perrin, Forster & Crosby Inc. to head its investment consulting operation. He left D.L. Eager Associates Inc., a Louisville, Ky.-based firm that advises money managers on how to market their products.

"The plan is to have a business which is going to focus on TPF&C clientele," said Mr. Bransford, who has the title of national manager-asset consulting and will be based in Atlanta.

The hiring of Mr. Bransford signals a new push into the investment consulting business for TPF&C, where the firm has lagged some of its major competitors. "We were inching into asset modeling and decided to go all the way," said Don Sullivan, vice president and director in TPF&C's New York office.

The firm was conducting asset/liability studies for clients but was unable to meet customer demands to perform manager selection and evaluation works, he explained.

TPF&C already has an infant investment consulting practice in place, but Mr. Bransford is expected to expand the business substantially.

Last fall the firm snared a consulting contract with the $525 million City of Memphis, Tenn., retirement system away from E.F. Hutton Consulting Group.

Tom Harrison, manager of debt and investments for the Memphis fund, said fund officials were impressed with TPF&C's asset allocation tools.

TPF&C now has only one full-time consultant, John Sweeney in Atlanta, a few consultants available part time and about six systems people.

The firm won't necessarily build up its data base of investment manager performance from scratch, but might look at subcontracting existing data bases where appropriate, he said.

Also, TPF&C likely will not train specialists for every asset class, but might contract with a real estate consultant, for example.

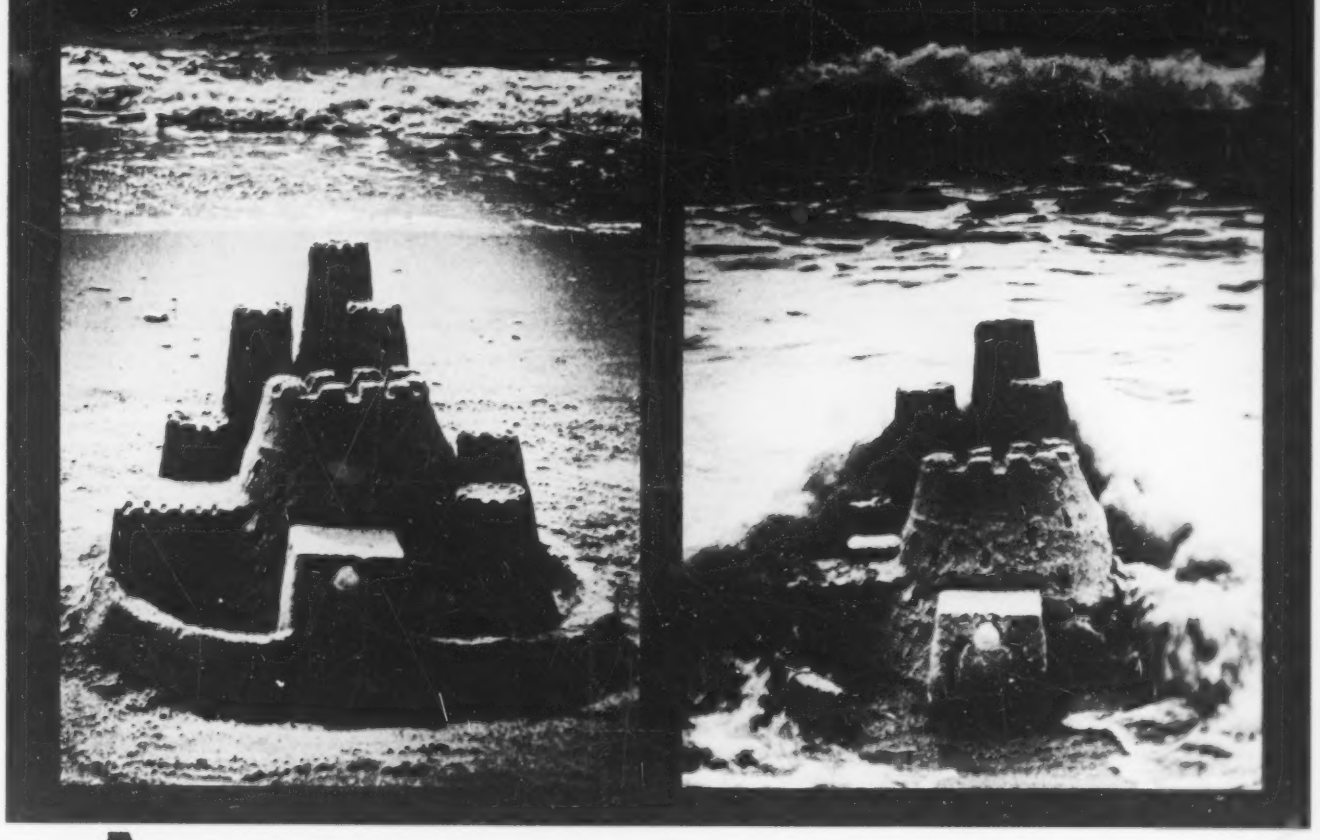
Mr. Bransford has been in and out of the investment management consulting field lately, but spent nearly 15 of the past 17 years in the business.

From 1971 through 1978, he was at the old A.G. Becker & Co. consulting business, leaving to join Meidinger Inc. as senior vice president and member of the board of directors.

Shortly after Meidinger was merged into William M. Mercer Inc. in early 1984, he left to become president of Little Rock, Ark.-based Meridian Management Co. for a year.

He then returned to Mercer-Meidinger in June 1985 to oversee the asset planning business. But he left the firm again in November 1986, this time to join Dave Eager, another former head of the Mercer asset planning unit. ■

# Will Your Real Estate Investment Withstand The Test Of Time?



At any given moment, many real estate investments may seem pretty solid. But what happens when you look beyond their short run return at how they perform against the assault of an ever-changing economic environment?

With consistently high returns, the NCNB Real Estate Fund has climbed to the crest of the industry in recent years. An average annual return of 14.5%* over the last 5 years continues to position us as a superior open-end fund real estate manager. Our ten-year average is just as impressive.

In addition, our experienced team of leasing, architectural, construction, and finance specialists have developed high quality properties in the thriving Southeast. This effort has produced excellent results through the economy's ebb and flow. Call Mark Coltrin, NCNB Trust Group Vice-President for details at (704) 374-8405, or write him at One NCNB Plaza, T09-1, Charlotte, NC 28255.

# Few dodge '87 perils

## Market crash, loan losses cause red ink

By Marcia Parker
and Brad Rudin

NEW YORK -- J.P. Morgan & Co. Inc. and Morgan Stanley Group Inc. outpaced their rivals in commercial and investment banking with 1987 financial statements that showed few scars from the difficult year.

Money center commercial banks sustained poor results because of the large provisions for loan losses that were taken in response to the Third World debt crisis. The investment banking industry experienced setbacks in trading, underwriting volume and mergers and acquisition activity as a result of the Oct. 19 stock market plunge.

Although J.P. Morgan's net income fell, it posted a better bottom line than other New York-based money center banks, which sustained deep losses in 1987.

Morgan Stanley, a bulge-bracket investment bank, was the only publicly traded securities firm to generate higher earnings in 1987 than in the previous year.

J.P. Morgan overcame the tide of red ink in the banking industry despite an allowance for credit losses amounting to $1.708 billion at the end of 1987.

The bank posted net income of $83.3 million, 39 cents a share, in 1987.

J.P. Morgan's improvement in non-interest operating income in 1987 — $1.346 billion, up 10% from the $1.224 billion earned in 1986 — was in part offset by a decline in taxable-equivalent net interest earnings, which lagged because the bank placed $1.3 billion of Brazilian loans on a non-accrual basis.

Bankers Trust Co., the only other New York-based money center to finish in the black, posted a 2-cent-a-share profit in 1987 with net income of $1.2 million. That figure, which reflects the effect of a special credit loss addition of $700 million, would have been a record $637.2 million — $8.79 a share — were it not for the allowance.

**Downward pressure on the bottom line at large banks and brokerage houses**

| | Net income ($ millions) | | Earnings per share | |
|---|---|---|---|---|

Source: From company reports

The bank boosted its allowance for credit losses to $1.298 billion at the end of 1987 from $590.7 million the previous year.

Non-interest income — which totaled $1.632 billion, up $624.6 million or 62% from 1986 — powered much of the bank's profitable performance.

Citicorp, the nation's biggest bank, reported 1987 results that were shaped by its decision to augment reserves by $3 billion, which reduced earnings and equity by that amount. The bank reported a $1.1 billion loss, negative $4.26 a share in 1987.

Brazil's inability to pay any interest during the year resulted in a revenue shortfall of $333 million and an after-tax earnings impact of $200 million.

Manufacturers Hanover Corp. emerged from 1987 with the biggest loss among the New York money center banks — $1.14 billion or negative $27.04 cents a share.

It experienced a decline in net interest revenue and net yield because of its decision in the first quarter to place on non-accrual status about $1.5 billion of outstanding loans to Brazilian and Ecuadorian borrowers.

The Chase Manhattan Corp. and Chemical New York Corp. also suffered drops in net interest income, attributing the decline to the non-accrual status of South American loans.

Because of special items and tax benefits, Merrill Lynch reported net earnings of $390.6 million for 1987, down 14% from $454.3 million in 1986. Revenue for 1987 reached a record $10.9 billion, up 13.5% from the $9.6 billion reported in 1986.

PaineWebber Group Inc. reported net earnings of $72 million, down 4% from 1986. Revenue for the year was $2.4 billion, up slightly from the prior year. The firm attributed the relatively strong results to good performance from its fixed-income and asset management businesses that offset the October market crash-related losses.

First Boston Corp., Salomon Inc., and Shearson Lehman Brothers Holdings Inc. saw earnings plunge in 1987.

First Boston reported earnings of $108.9 million, down 40% from 1986, while revenue rose less than 1% to $1.32 billion.

Net earnings at Salomon Inc. slumped 72.5% for the year to $142 million compared to $516 million in 1986, while revenue fell to $6 billion from $6.8 billion. A slew of fourth-quarter charges pulled down the full-year results, including crash-related losses, layoff costs and a hefty charge resulting from pulling out of its new headquarters.

Shearson reported net income dropped to $101 million, down 70% from a record $341 million a year ago.

Revenue rose to $5.12 billion from $4.95 billion. Investment banking revenue dropped sharply, while investment advisory revenue climbed. ■

Who offers your defined contribution plan participants the flexibility of daily telephone transfers between funds?

The same company who offers excellent investment management.

As a leading provider of 401(k) and other defined contribution plan services to more than 1,000 corporations across the country, Fidelity Investments offers a wide range of investment management and client services designed to meet the needs of both you and your employees.

**A Wide Array Of Nationally Known Funds.** With more than $70 billion in assets under management, Fidelity offers a broad choice of professionally managed mutual funds ranging from equity funds like Fidelity Magellan Fund and Fidelity Equity-Income Fund, to money market funds and GIC's. The funds are available on a *no-load* basis to plans with more than 200 eligible employees. And, as market conditions or personal investment objectives change, plan participants have the flexibility to transfer their investments among available mutual funds by telephone on any business day.

**Comprehensive Recordkeeping.** Fidelity's recordkeeping services are designed specifically to reduce your administrative burden. Not only can your employees call us directly to transfer existing balances, they can also redirect future contributions by telephone. Our state of the art system and experienced employee benefit professionals work to ensure timely and accurate reports for both you and your employees.

**Employee Communications Support.** Fidelity will work with you to develop the communication materials needed to support your employees from enrollment through retirement. We'll help you explain your program and the available investment options clearly and effectively. In addition, your employees can call toll-free 24 hours a day, seven days a week and talk with a knowledgeable Fidelity representative about available investment options.

For more information about Fidelity's defined contribution plan services, including fund prospectuses covering management fees, expenses, and applicable sales charges, please call Jeffrey Paster, Corporate Market Manager, at 1-800-345-5033. In Massachusetts call collect 617-570-5692.

PIPER

# Small banks lead equities

By Carol Wiley

Pooled equity funds run by three small banks outperformed all others for the quarter and year ended Dec. 31.

The top pooled equity fund in Pensions & Investments' Performance Evaluation Report for 1987 was managed by Beverly Trust Co. of Chicago, with a 22.4% return. It was followed by Citizens Heritage Bank of Piqua, Ohio, whose Cliran Equity Fund returned 20.1%.

By comparison, the Standard & Poor's 500 stock index returned 5.3% for the year and the PIPER median fund, 3.5%.

Beverly also finished fourth for the quarter with a return of 6.6%. The only equity funds not posting negative returns for the quarter were two run by First National Bank of Elgin Inc., Elgin, Ill. The bank's equity funds C and A were first and second with returns of 4.8% and 3.1% respectively.

The S&P 500 returned -22.5% for the quarter and the PIPER median, -21%.

The PIPER universe comprises 316 pooled equity funds of banks and insurance companies.

For the three-, five- and 10-year periods, the median fund scored compound annualized returns of 16.3, 14.4% and 14.7% respectively, and the S&P 500 returned 18.1%, 16.5% and 15.3%.

Perennial PIPER leader Sun Banks, Orlando, Fla., took top honors for those three periods, with annualized returns of 31.4%, 28.4% and 22.1%, respectively. Sun Banks also ranked highly for the year, returning 16.3%.

William Guth, Beverly Trust's senior investment officer, attributed the growth of the $11 million fund to a conservative investment approach. "We play it straight," Mr. Guth said. "We look out for quality issues and the most attractive sectors. There's no indexing, no options, no futures."

In August, the fund was holding **Delta Air Lines Inc.**, **Dow Chemical Co.**, **Monsanto Co.**, **General Electric Co.**, **Pfizer Inc.** and some railroad and oil company stocks.

In mid-October the fund began to sell, divesting almost all equities Oct. 16. After the crash, the fund cautiously re-entered the market, purchasing large-capitalization stocks such as **Caterpillar Inc.**, **Dow Chemical**, **Eastman Kodak Co.**, **GE** and **Philip Morris Cos. Inc.**

The $12 million Citizens Heritage fund, managed by James Investment Research Inc. of Alpha, Ohio, seeks out "stocks neglected by Wall Street, with good earnings, a clean balance sheet, not much debt, strength and relative performance," said Frank James, president of the investment firm.

First National Bank of Elgin got out of the equity market entirely in January 1987 and stayed out until November, when it became 50% invested in capital goods, metals and energy, according to William Palmer, vice president.

Both First of Elgin funds are small, holding between $5 million and $10 million each.

For the year, Beverly Trust and Citizens Heritage were followed by The Phoenix, Hartford, Conn., with 19.4%; First National Bank of Chicago, with 19.2%, and the growth fund of MTrust Corp., Dallas, with 18.3%.

Frank Stanley, portfolio director at The Phoenix, said caution early in the year, buying right after the crash, and an emphasis on sectors and stock selection added to the fund's gains for the year.

Phoenix recorded a fourth-quarter return of -7.6%, a three-year compound annualized return of 21%, and a five- and a 10-year return of 17%.

"One thing that was extremely important was that we got pretty cautious, so we went into October with pretty high reserves in excess of 30%," Mr. Stanley said. "In some funds, we were using Treasuries quite a bit.

"We started to take buy orders the next day (Oct. 20) and got fully invested and stayed that way to the end of the year."

# Bond leaders keep it short

By Trudy Ring

Pooled bond funds with short maturities performed best in 1987, while those in intermediate to long bonds did better in other periods of the Pensions & Investments' Performance Evaluation Report.

The defensive bond fund managed by Hawaiian Trust Co., Honolulu, was the top PIPER performer of 1987, with a return of 8.9%. The PIPER survey covers 290 pooled fixed-income funds run by banks and insurance companies.

A majority of funds underperformed the Shearson Lehman Government/Corporate bond index in all periods except the year. In the quarter, the median PIPER fund returned 4.7% and the index 5.8%; for the year, the median return was 2.7%, the index 2.3%; for three years, the median was 11.9%, the index 12.8%; for five years, the median was 11.3%, the index 12.2%; and for 10 years, the median was 9.9%, the index 10.3%. All returns for periods of more than one year are compound annualized.

Hawaiian Trust's $80 million fund had an average maturity of slightly more than two years as of Dec. 31, said William Barton, senior vice president and chief investment officer. It generally has 85% to 88% of its assets in collapsible guaranteed investment contracts, which can be redeemed on six-month's notice, with the rest in money market instruments.

"Its main purpose is to provide high current yield with no principal volatility," Mr. Barton said of the fund. It tends to do well when interest rates are rising, as they did for much of 1987.

In the fourth quarter, when rates fell, so did its return, to 2.2%, in the bottom 10% of the PIPER universe. In the three years ended Dec. 31, the fund was just above the bottom 10%, with a compound annual return of 9.8%. It was too new for other periods of the survey.

First Alabama Bank of Mobile's bond fund was positioned well for 1987 after shortening its average maturity, roughly to three from

There was a time when our customers rarely used their cellular phones outside their own cities.

Arrangements had to be made in advance. There were pre-registration numbers to call. Even additional billing procedures.

But today, city limits can be ignored. Thanks to Cellular Passport Service℠, an innovative concept offered by our subsidiary, Southwestern Bell Mobile Systems.

With Passport, you can leave town on a moment's notice. And thanks to our agreements with other cellular companies across the nation, you can use your phone as easily as you would at home.

Since we've paved the way, our customers are calling on the road more often. From just about anywhere in the country. In fact, at last count there were 145 cities across the U.S. and Canada where Passport could be used. And that number continues to grow.

For our customers, and for us, that's a sure sign of success.

*Making the most of what we know best.*

Southwestern Bell Corporation

ing avenues for our customers.

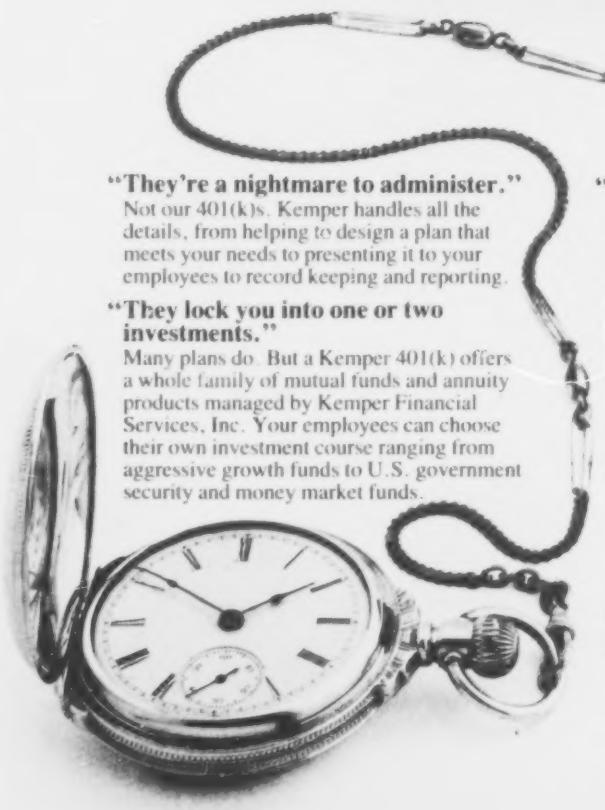
# Kemper retires some old ideas about 401(k)s.



**"They're a nightmare to administer."**
Not our 401(k)s. Kemper handles all the details, from helping to design a plan that meets your needs to presenting it to your employees to record keeping and reporting.

**"They lock you into one or two investments."**
Many plans do. But a Kemper 401(k) offers a whole family of mutual funds and annuity products managed by Kemper Financial Services, Inc. Your employees can choose their own investment course ranging from aggressive growth funds to U.S. government security and money market funds.

**"They're expensive."**
We can show how the implementation of a 401(k) plan need not be a costly employee benefit for your company. For a look, a free video cassette, and prospectuses containing more complete information, including management fees and expenses, call us today. Please read the prospectuses carefully before investing or sending money.

**Call us toll-free at:**
**1-800-356-1010, Ext. 1442**

**Kemper. There's never a bad time to make a good investment.℠**

*Continued from page 14*

five years, late in 1986, said Charles Murray, trust investment officer. It continued shortening in 1987 — with average maturity of about two years as of Dec. 31 — and finished second for the year, returning 8.8%.

When the bond market shifted in the fourth quarter, the fund did not do well, finishing in the bottom 20% for the quarter with a 2.8% return. Its longer-term performance was better: 13.5%, in the top 30%, for the three-year period; 14.3%, fourth among all funds for five years; and 10%, just above the median, for 10 years.

The $13 million fund is two-thirds in Treasury securities and one-third in corporate bonds, Mr. Murray said.

For the three- and five-year periods, the top finisher was Delaware Trust Co., Wilmington, which focuses on the middle of the maturity range. The fund usually has an average maturity of 10 years, but shortened a bit in 1987, to about eight years as of Dec. 31.

Staying in the intermediate range and exploiting market inefficiencies helped the fund to a 17.3% compound annual return for five years and 16% for three years. The fund was too new for the 10-year period.

The fund, now at $25 million, is about 90% in mortgage-related securities and 10% in municipal bonds, said David Baldt, senior vice president and director of fixed income. Lack of trading opportunities in the mortgage-backed market last spring dampened the fund's 1987 performance, he said. Still, it beat the market and the median in 1987, with 3.4%, and was back in the top 10% for the quarter, with 6.3%.

Tops for the 10-year period was Sovran Bank, Richmond, Va., with 12.7%. Sovran does a moderate amount of interest rate forecasting but tends to stay in the intermediate range of the market, said William Schultz, senior vice president of Sovran Capital Management Corp., the affiliate that runs the fund.

At the end of 1987, the fund's average maturity was eight years, up from five years before the Oct. 19 stock market crash, when its managers correctly anticipated a drop in interest rates, Mr. Schultz said. The fund's return for the year was 4.5%, in the top 20% of the PIPER universe; for the fourth quarter, it was up 5.3%, in the top 40%. It was in the top 10% for the five-year period, with 13.5%, and the top 20% for the three years, with 14.1%.

The fund focuses on investment-grade, high-coupon securities; its $115 million is about 60% in corporates, 25% in mortgage-backed securities and 15% in Treasuries.

Centerre Trust Co., St. Louis, also an interest rate forecaster, topped the quarter's rankings, with 10.4%. It ranked high in all other periods except 1987, when it was third from the bottom, with −3.2%.

Centerre expected the fourth quarter's interest rate drop to come earlier in the year, so was in long bonds, with an average maturity of 22 years, throughout 1987, said Richard Hibbs, senior vice president.

The fund was in the top 10% for the three-, five- and 10-year periods, with returns of 16.5%, 13.6% and 11.9% respectively. Now at $150 million, it is about 60% in Treasury and agency securities, with the rest in corporates and private placements. ■

# Equity returns

*Continued from page 14*

Throughout the year, the fund favored technology, drug and hospital supply company stocks, such as **Apple Computer, Unisys Corp.** and **Johnson & Johnson.**

"Toward the end of the year, we began to believe that secondary growth stocks (such as **Rycoff-Sexton Inc.**) were just plain and simple cheap, and we still believe it."

First Chicago ranked in the top 20% for three-year returns, with 19%, and recorded a five-year return of 16.9%.

"We're very pleased about the longer-term numbers because ... we outperformed the market over five years with a level of volatility 40% less than market," said Gary Brinson, president of First Chicago Investment Advisors.

Throughout the year, the $300 million fund had increased its hedged position from about 20% to 53% by Oct. 19.

The stock-only portion of the fund, was up 6.2% for the period, Mr. Brinson said, and was "stock specific," with the exception of a focus on drug companies. The fund bought **MCI Communications** and **Intel Corp.**, and sold **Santa Fe Southern Pacific Corp.** and **Merck & Co. Inc.**

"We had a larger exposure to smaller stocks than the S&P, but about the same as the Wilshire 5000," Mr. Brinson said.

Steven Gold, vice president and head of marketing at MTrust, said "several gut calls" that kept the fund's equities 7% above the S&P for most of the year and increased cash late in the year brought about its good return. ■

# Commercial banks take aim

## Changing regulations open doors to possible new avenues of profit

By Marcia Parker

Commercial banks are fine-tuning their strategies for making inroads into the investment banking business to take advantage of the changed regulatory and competitive environment and to avoid being whiplashed by turbulence in the financial services industry.

Several commercial banks — including Chase Manhattan Bank and Citicorp, both of New York — have reorganized their investment banking operations. Some have taken advantage of opportunities created after some Wall Street investment banks exited certain businesses and laid off people. A few banks — including Citicorp, Security Pacific Corp., Los Angeles, and Manufacturers Hanover Corp., New York — have hired jobless Wall Street investment banking professionals to bolster their staffs.

The banks are polishing their strategies while they face a host of regulatory changes and an uncertain regulatory future, sagging profits from commercial lending, worsening developing-country debt problems and questions about just how lucrative investment banking will be, considering the losses Wall Street firms have piled up recently.

Meantime, it's hard to assess how much investment banking income has contributed to the banks' bottom line, because most don't break out that financial data. The commercial banks' 1987 earnings reports indicated income from fee-producing businesses, which include many investment banking services, rose along with foreign exchange operations.

Because each bank has adopted a different strategy for penetrating the investment banking market, it's tough to compare performance.

While all banks clearly are concentrating more on the higher-risk, higher-reward merchant banking services such as mergers and acquisitions and advisory work, they also are emphasizing historically strong areas such as private placements and risk management. And they are moving more aggressively to capture a piece of the growing securitization market and corporate restructurings.

Some banks — such as Citicorp, Bankers Trust Co. and J.P. Morgan & Co., all of New York — are pursuing global merchant banking, servicing all the financing needs of their customers everywhere. Others like Manufacturers Hanover are carving out large niches to focus on corporate finance and advisory work.

Some money center banks, like Marine Midland Bank, New York, and a few non-money center banks such as Connecticut National Bank, Hartford, First National Bank of Chicago and Continental Illinois National Bank & Trust Co., Chicago, are targeting the middle market, thereby avoiding head-on competition in every line of business with the big Wall Street investment banks.

Chase reorganized its global banking unit, merging its commercial and investment banking operations.

Citicorp also has restructured its investment banking operations. Citicorp Chairman John Reed said the investment banking sector would have to rein in costs. But Michael Callen, who succeeded Thomas Theobold as head of investment banking operations at Citicorp, is aggressively pushing a campaign to broaden the bank's reach into investment banking worldwide.

Roger Widmann, managing director and head of Chemical Bank's U.S. banking business, said Chemical's investment banking revenue jumped to $73 million in 1987 from $5 million in 1984. "That's up-front advisory fees on everything from fairness opinions to restructurings to defensive work we have done for clients," Mr. Widmann said.

Chemical is focusing on business with the large-company market and this year will further tap the middle market it began to target last year, including companies with revenue of less than $250 million. Chemical also will make a major push this year to capture advisory work with companies in the midst of bankruptcy reorganization and to pursue mergers and acquisitions.

Continental Illinois Bank & Trust Co. is among the banks setting their sights on the middle market for investment banking services, hoping to avoid direct across-the-board competition with the big Wall Street investment banks.

Douglas Ebert, Manufacturers Hanover sector executive vice president-the investment banking group, said the bank also is concentrating on large corporations and the middle market, especially for providing corporate finance and advisory services.

"We are not trying to be all things to all people," Mr. Ebert said. "For instance, we chose not to go into big-bang U.K., and we're not building up bond, equity and trading operations."

As of Dec. 1, sector earnings for the year were projected to be about $134 million, compared with $179 million in 1986.

Bankers Trust has been building its corporate finance operation for three years and is widely viewed as having made significant inroads into the investment banking business.

"Our deal flow has never been bigger on a global basis," said David E. Dougherty, managing director and head of the mergers and acquisitions group. "Last year we did 41 deals worth $6 billion. Our fee-income business revenue is growing dramatically, especially private equity and mergers and acquisitions. Our game plan is to compete across the board in every securities market all over the globe," he said.

Outside New York, key commercial banks are concentrating on the middle market, often in their own geographic areas.

# Players ready to test ruling's limits

By Brad Rudin

NEW YORK — Securities industry officials have good reason to worry about a federal appellate court decision expanding the underwriting powers of commercial banks.

Although the court's decision is limited to mortgage-related securities, commercial paper and a broad range of municipal revenue bonds, the logic of the case could result in powers that go well beyond the products sanctioned in the ruling by the 2nd U.S. Circuit Court of Appeals, New York.

Under the court's ruling last month in Securities Industry Association vs. Board of Governors of the Federal Reserve, commercial banks should be able to underwrite quality corporate securities not specifically mentioned in the case, said Richard V. Fitzgerald, a partner with the Washington law firm of Muldoon, Murphy and Faucette and a former chief counsel to the comptroller of the currency.

The decision upholds the Fed's power to grant expanded underwriting power to the securities subsidiaries of Citicorp, J.P. Morgan & Co. Inc., Bankers Trust New York Corp., Chase Manhattan Corp., Chemical New York Corp., Manufacturers Hanover Corp. and Security Pacific Corp.

"There's a feeling that the possibility exists to go beyond the three securities we got approval for," said L. Thomas Block, senior vice president for government relations at Chemical New York Corp.

"We are going to test the outer limits of what we can do to serve our customers."
— L. Thomas Block
Chemical Bank

The bank's lawyers are seeking ways in which to expand the scope of permissible activities, Mr. Block said. "We at Chemical are going to test the outer limits of what we can do to serve our customers."

Wall Street also finds itself challenged on the legislative front by several bills that would reduce or eliminate the Glass-Steagall Act's restrictions on commercial bank involvement in the securities business.

The Securities Industry Association condemned the decision and said it might ask for review by the Supreme Court.

"It's certainly disappointing to any of us in this industry who were looking for the affirmation of Glass-Steagall," said Robert E. Linton, chairman of Drexel Burnham Lambert Inc., New York.

Because the decision will take effect when the congressional moratorium on expanded securities powers for banks ends March 1, the securities industry finds itself under increased pressure to blunt the commercial banks' latest challenge.

"From the securities industry's standpoint, (the decision) makes it all the more important for us to pursue what we think is an appropriate approach to the problem," said Robert A. Gerard, a managing director at Morgan Stanley & Co. Inc. and spokesman for the SIA on Glass-Steagall matters.

Although not binding on federal judges in other circuits, the decision is important because it shapes the law in New York City, where most major banks have their headquarters.

The core of the court's decision is the interpretation of Glass-Steagall's ban on the affiliation of banks with entities that are "engaged principally" in underwriting and dealing in securities.

In interpreting Section 20 of the act, the court held that bank securities affiliates that underwrite and deal in "bank-eligible" securities — Treasury paper and some municipal bonds — are not deemed to be "engaged principally" in the securities business. Section 20 "only prohibits affiliation with firms that are 'engaged principally' in forbidden investment activity," the court held.

This interpretation means banks can affiliate with securities units so long as the level of activity in the "ineligible" securities remains modest. The court, deferring to the Fed's order, said the dollar volume of "ineligible" underwriting could not exceed 5% of the bank securities unit's gross revenue. Another Fed restriction based on market share was struck down by the court.

Commercial banks are likely to boost their presence in the underwriting business not only by expanding the range of products underwritten, but by trying to increase the existing gross revenue limit, said Mr. Fitzgerald.

"Five percent is a rather modest number and I think that it would grow over time," he said.

Because the court's interpretation of Section 20 offers a powerful vehicle for expanding commercial bank securities powers without congressional consent, some Wall Street executives favor proposed legislation that would close the "principally engaged" loophole. The bill, introduced by Rep. Charles E. Schumer, D-N.Y., would bar bank regulators from using Section 20 to obtain expanded powers for banks.

The bill also would allow commercial banks to underwrite and deal in commercial paper and mortgage-backed securities. ■

# Door opening

*Continued from page 35*

Security Pacific, which has made great strides in building a global merchant banking operation, is taking advantage of the problems on Wall Street to selectively add staff. It hopes to provide financing to companies that lost out when the junk bond market shut down post-Oct. 19, and pursue other areas.

"Our infrastructure is in place. We're in the fine-tuning stage," said Frederick T. Waldek, managing director-Security Pacific merchant banking group.

Michael J. Murray, the vice president in charge of Continental Illinois' investment banking operations, said the bank is aiming at the middle-market corporate customer with $50 million to $500 million in revenue. "Banks have had the most success in companies below the Fortune 100, which Wall Street historically didn't focus on. Then for a while they started to make a push for them. Now they are not," Mr. Murray said. "We have a strong corporate customer base, especially in the Midwest, and we are trying to build on those strong historic relationships."

At Connecticut National Bank, the investment banking group has grown dramatically in recent years and when the pending merger is completed with Shawmut Bank of Boston, it is expected to be a major force in the region.

Joseph F. Savage, managing director-investment banking, said Connecticut National is concentrating on providing investment banking services to middle-market companies with revenue in the $5 million to $50 million range located in the Northeast corridor.

"For a regional bank, the middle market is an area that until recently was not well covered by the investment banks," Mr. Savage said, adding the bank is trying to make more inroads into handling corporate divestitures for these companies and private placements. He said investment banking operations are expected to contribute a seven-figure number to the bottom line in 1988.

Len Caronia, First Chicago senior vice president who heads the financial products group that covers investment banking, has been stepping up activity in all the investment banking areas from mergers and acquisitions to venture capital to private placements. "Our wish list for 1988 includes concentrating on equity related financings," Mr. Caronia said. "It's our view that for the foreseeable future there will be excess capacity in the global debt market." ■

# Salomon to open new unit

NEW YORK — Salomon Brothers Inc. plans to establish a money management unit registered under the Investment Advisers Act of 1940 that will invest exclusively in tax-exempt securities.

The new unit, Salomon Brothers Asset Management Co., will begin operations once the Securities and Exchange Commission approves the firm's application.

Martin L. Leibowitz, a managing director in Salomon's fixed-income research group, will serve as a member of the asset management company's board of directors.

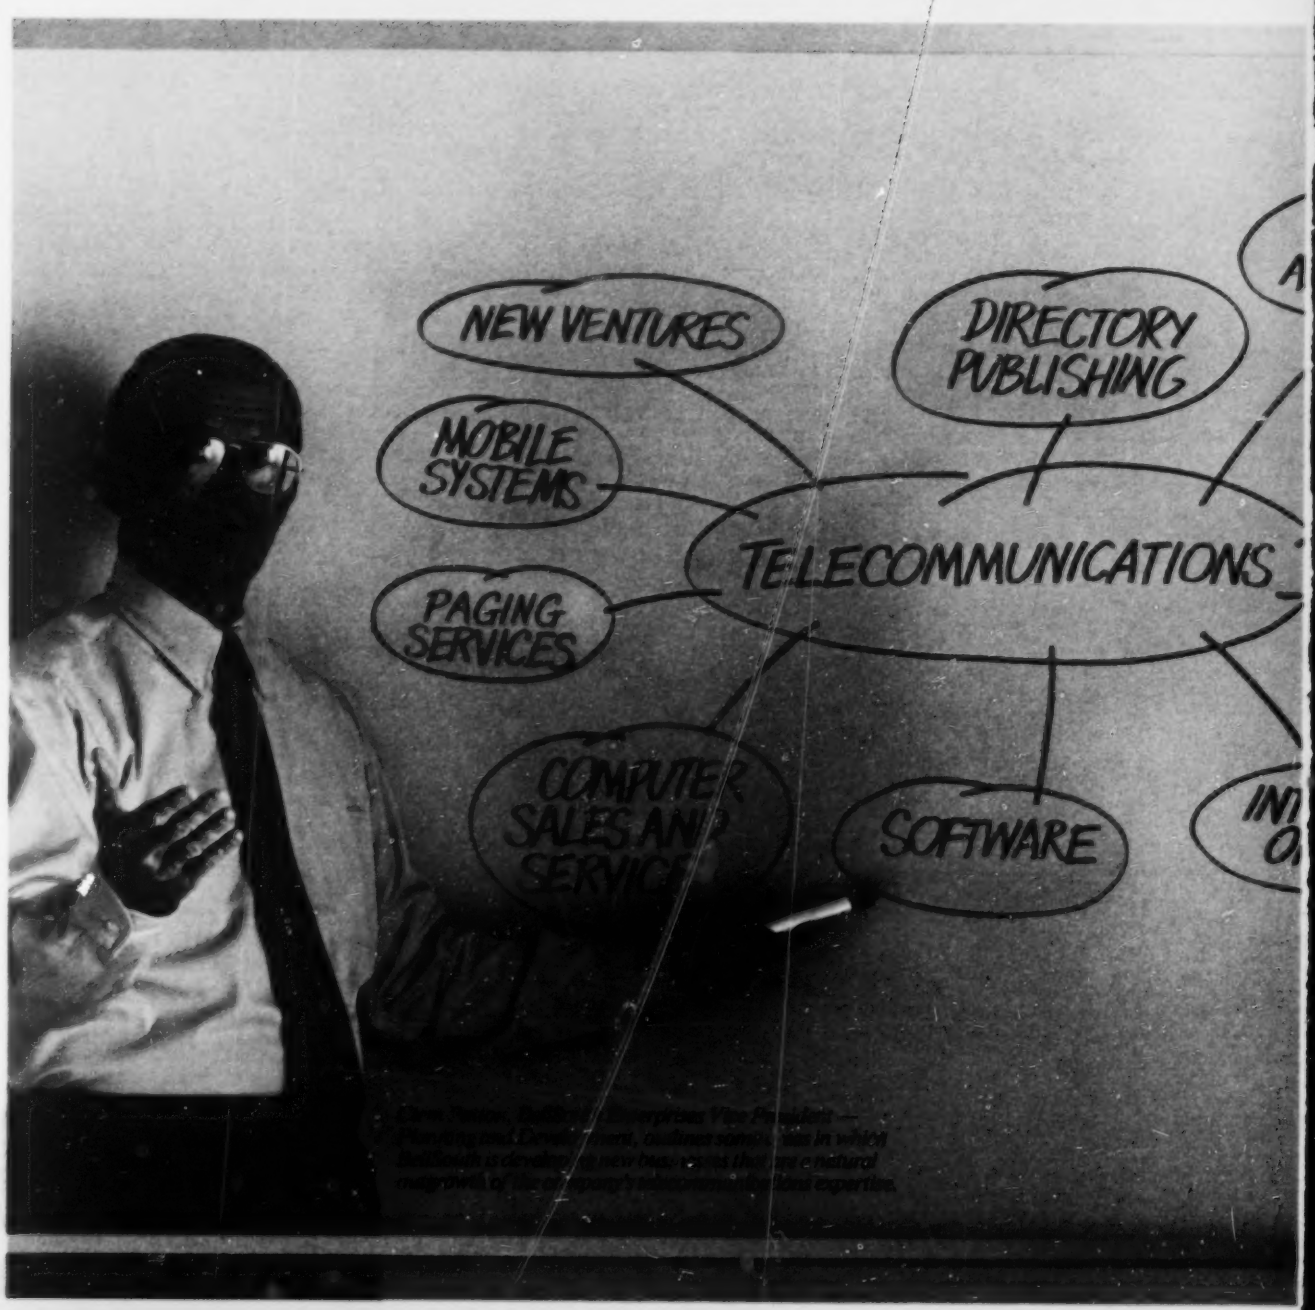
Salomon Brothers Asset Management will sell its services to wealthy individuals, nuclear decommissioning trust funds, insurance companies and corporations seeking short-term investments, said Frederick W. Gaertner, a Salomon vice president. "The type of market we're out to serve hasn't been served very well," he said.

The minimum account size will be $5 million.

Some assets had been managed by the Discretionary Municipal Investments group, which is not registered under the 1940 act, Mr. Gaertner said. The group manages several hundred million in tax-exempt assets, he said. The changed status will give asset management at Salomon a more defined identity, Mr. Gaertner said.

Salomon decided against establishing an institutional tax-exempt money management unit both because the field is crowded and entry into this business would pit the firm against money managers who use Salomon's brokerage services. ■

BellSouth



## Purchases of equities set record

NEW YORK — Despite a third-quarter setback, foreign net purchases of U.S. equities surged to $23.5 billion in the first three quarters of 1987, surpassing 1986's record $18.7 billion by 26%, according to a report by the Securities Industry Association.

Foreign net purchases of U.S. equities in the third quarter slid 42% to $5 billion from $8.6 billion in the second quarter.

As for the fourth quarter, foreign investors did not abandon U.S. equities in October.

Preliminary Treasury data place net purchases at $2.4 billion.

However, preliminary SIA data show large foreign divestitures of $4 billion to $5.5 billion, in November. Thus, the final quarter of 1987 could be the first with foreign net sales of U.S. equities since early 1985, according to the report.

Foreign gross activity in U.S. equities rose to $136.8 billion in the third quarter, and gross transactions in 1987 will be more than $400 billion, compared with a previous record of $277.5 billion in 1985, according to the report.

From the second to the third quarter, foreign investor purchases of corporate bonds changed little, registering about $6.6 billion.

Foreign net purchases of U.S. Treasuries, which to a large extent reflect coordinated central bank intervention in currency markets, subsided to $2.8 billion in the third quarter from $8.6 billion in the second quarter, as the dollar benefited from mainly favorable news.

Among U.S. investors, moderate purchases of European and Canadian stocks and continued large sales of Japanese stocks resulted in net sales of $66 million of foreign stocks in the third quarter.

# 401(k) growth gives boost to GIC managers

By Fred Williams

The leading managers of guaranteed investment contracts — who attracted $17.1 billion in net new business last year — credit much of their growth to the boom in defined contribution plans.

"Defined contribution plans and 401(k) plans continue to move in the GIC area like a Mack truck," said Larry Mylnechuk, senior vice president at Morley Capital Management Inc., Lake Oswego, Ore. Morley Capital attracted $1.07 billion in net new business in the 11 months ended Dec. 1, according to *Pensions & Investment Age*'s Scorecard survey.

GICs have become "extremely important especially to 401(k) plans and other defined contribution plans. The market will continue to grow because employees have made them important. There is no other investment which you are guaranteed a rate like in a GIC," said Win Profio, vice president-marketing at Provident National Assurance Co., Chattanooga, Tenn. Provident ranked fourth in this year's Scorecard, with net new business of $1.5 billion.

Among plans offering GIC funds, 59% of employee contributions were directed to that option, according to a survey published last year by Bankers Trust Co., New York.

According to the survey, 53% of corporate defined contribution plans offer GIC options. Among plans where there is a GIC option, the GIC fund makes up an average of 45% of total assets.

*P&I Age*'s Scorecard measures money management firms' net asset gain in the 11 months ended Dec. 1.

The figures take into account contributions from new and existing clients, client withdrawals and return on investment.

The net new business by the top 10 survey respondents represents contracts written by insurance companies. Because investment managers deal directly with the insurance companies, there might be some double counting in the survey.

Also, most major employee benefit consulting firms manage or place GICs on behalf of their pension clients and were not represented in the survey. For instance, the Dallas office of William M. Mercer-Meidinger-Hansen Asset Planning Inc. added approximately $900 million in new GIC placements for its clients during 1987.

The $17.1 billion recorded by the top 10 GIC managers this past year represents a 10.3% increase from the $15.5 billion net gain by the top 10 during the same period in 1986.

Prudential Asset Management Group, Newark, N.J., was the leader in new GIC business with $4.6 billion, marking the third year the firm has led the pack.

Seven of this year's top 10 are insurance companies; two are investment management firms specializing in management of GIC portfolios; and the third is a specialist unit of a bank.

New to the top 10 list this year are John Hancock Financial Services, Boston, ranking eighth with $1.04 billion in new business; the GIC management division of Bankers Trust Co. — Investment Management Group, ranking ninth with $960 million; and the New York Life Insurance Co., with $923 million.

Bankers Trust entered the GIC management field late in 1986 and now tops $1 billion under management for tax-exempt clients that include ITT Corp. and Hanson Industries.

Jerry Chafkin, vice president and manager-GIC investments at Bankers Trust, said the GIC division expects additional asset growth during 1988 of $900 million to $1 billion.

"The interest is primarily from people who are coming around to the realization that GICs are an investment and that they should look for a manager rather than a consultant or a broker," Mr. Chafkin said.

**Most new GIC business**

| Firm | $ millions |
|---|---|
| Prudential Asset Mgmt. | 4,590 |
| Travelers Cos. | 2,721 |
| Aetna Life Insurance | 1,652 |
| Provident Nat'l Assurance | 1,477 |
| PRIMCO Capital Mgmt. | 1,400 |
| Principal Financial Group | 1,274 |
| Morley Capital Mgmt. | 1,065 |
| John Hancock Financial Services | 1,042 |
| Bankers Trust | 960 |
| New York Life Insurance | 923 |

Investment managers and insurance company officials expect the GIC market to remain attractive in 1988, but with rates and spreads over Treasury instruments remaining volatile.

Despite the security of the investments, the October stock market crash has not resulted in a wholesale flight to GICs from equities.

"Oct. 19 revived interest in using GICs as a strategic tool in the asset allocation process," said Morley's Mr. Mylnechuk.

"Portfolio insurance gave the market a black eye. People realized there are no magic solutions in protecting your returns. But it's how you deploy your assets which makes the difference in the long run."

Morley added eight GIC clients during 1987: Aluminum Co. of America; Cyanamid of Canada; First Wisconsin Trust Co.; International Brotherhood of Electrical Workers; Joint Industry Board of the Electrical Industry; Pacificorp; Payless Drug Stores Northwest; and the Southern California Food and Commercial Workers Union.

PRIMCO Capital Management Inc., Louisville, Ky., the largest independent investment GIC manager, was fifth in terms of net new business with $1.4 billion.

Vernon Hodge, chief investment officer at PRIMCO, said GIC growth has been "fantastic" and has come primarily from a small group of large plans, mainly savings plans.

"Our growth is coming from a few very large plan sponsors with large plans who realize this huge category of assets needs full-time, day-to-day asset management," he said.

PRIMCO added eight GIC clients during 1987: Syntex Corp.; Colgate-Palmolive Co.; Brunswick Corp.; Boettcher Foundation; Cincinnati Bell Inc.; Tyler Corp.; Texas Instruments Inc.; and TWA Pilots Union.

Prudential Asset has gained the most new GIC business for the past two years. One reason is the firm's high profile in the market, another is the movement to higher-quality carriers, said Bruce Vane, vice president and executive director of financial-actuarial services at Prudential Asset Management.

"We aren't afraid to be in the market every day and we also concentrate on the larger contracts," he said. "One thing we have seen recently is that clients are making more distinction between the credit quality of carriers so that those that have higher quality credit ratings are enjoying more interest from the market."

Rounding out the top 10 were The Travelers Cos., Hartford, Conn., with $2.721 billion in net new business; Aetna Life Insurance Co., Hartford, with $1.652 billion; and Principal Financial Group, Des Moines, Iowa, with $1.274 billion.

Some GIC observers noted a capacity problem on the part of insurance carriers last year occurring earlier than the traditional end-of-the-year crunch.

"A lot of carriers seem to be backing away from the market because they don't like the stiff competition. That contraction may continue in 1988," said Mr. Vane.

"We're continuing to see a real problem with capacity," said Mr. Mylnechuk.

"We're seeing a lot more problems earlier in the year. Because of a greater volume of defined contribution money — and in some cases it is more than the carriers can or want to deal with — the demand is too great." ■

# 105 clobber S&P return

More than 100 investment management firms beat the Standard & Poor's 500 index by more than 500 basis points last year, despite the market plunge of Oct. 19.

The best performing manager in the *Pensions & Investment Age* survey, Davis, Weaver & Mendel Inc., Atlanta, had a return of 49.2% for the year, compared with 5.3% for the Standard & Poor's 500 index. For three years, the firm returned a compound annual 34.9% vs. the S&P 500's 18.1%.

Moran Asset Management, Greenwich, Conn., ranked second with a return of 34.1% for the year, and 21.4% compounded annually for the three years.

Third was Portfolio Timing Inc., Tacoma, Wash., which had a return of 33.7% for the year and 19.9% for the three years.

Three other firms had returns in excess of 30% for the year: PSM Investors Inc., Carlisle, Mass., 31.5%; Fort Wayne, Ind.-based Lincoln National Pension Insurance Co.'s emerging growth equity fund, 31.4%; and United Capital Management, Denver, 30.3%.

In the survey, mailed to more than 1,500 investment management firms, executives were asked to respond if their firm's equity performance surpassed that of the S&P 500 index by at least 500 basis points. Investment counseling firms were asked to provide a composite return figure for all equity accounts under management for the entire year. A commingled account return was acceptable for banks and insurance companies. (Bank and insurance company special equity accounts are not included, but are reported on page 16.)

Davis, Weaver & Mendel Inc. achieved its high return through market timing. The firm was fully invested until May, when it withdrew for a month, then was fully invested again until September, said Tom Weaver, president.

The firm, which manages about $130 million in tax-exempt assets, also participated in the year-end rally, he said.

**Managers beating the S&P index by 500+ basis points in 1987**

| Manager | 1 yr. | 3 yr. |
|---|---|---|
| Davis, Weaver & Mendel | 49.2% | 34.9% |
| Moran Asset Mgmt. | 34.1 | 21.4 |
| Portfolio Timing | 33.7 | 19.9 |
| PSM investors | 31.5 | 26.4 |
| Lincoln Nat'l Pension (EG) | 31.4 | NA |
| United Capital Mgmt. | 30.3 | 19.8 |

*More statistical information on page 34*

Mr. Weaver said the firm examines market momentum and the relative strength of various components of the market. "It's a very disciplined approach," he said.

Because of the firm's need for liquidity to enable it to move into and out of the market, it invests in large-capitalization stocks for its large clients and uses mutual funds for smaller clients, Mr. Weaver said.

Moran Asset Management's approach combines value and growth, and both parts of the strategy paid off last year.

The firm's search for companies with superior fundamental strengths and that will build value over time led it into stocks that performed strongly last year.

At the same time, its insistence on buying those companies when they are substantially undervalued and selling them when they appear fully or overvalued led it to raise cash before Oct. 19 and to buy again when the market plunge restored values.

Moran was fully invested until July, said Fred Moran, president and chief investment officer, but then executives became concerned about the economy and began to raise cash with the idea of moving to 30% cash. However, the firm was only 15% in cash when the market dropped.

Once the crash had reduced prices to where companies were a good value

# Proxy system is '88 target

By Marcia Parker

As this year's proxy season draws near, institutional investors are targeting the proxy voting system itself by sponsoring scores of proxy resolutions calling on companies to adopt confidential balloting and give all shareholders equal access to the proxy statements.

Impact of Avon letter assessed — page 2.

At least one first-time activist institutional investor, the $30.8 billion New York City Retirement Systems, is hailing pre-proxy season victories in the form of commitments from Aluminum Co. of America, Pittsburgh, and Minnesota Mining & Manufacturing Co., St. Paul, to voluntarily adopt confidential balloting.

The New York City fund reached agreement last week with those two companies. The pension fund agreed to withdraw its secret-ballot resolutions and the companies agreed to institute secret balloting and independent certification of voting results for this proxy season.

New York City has secret ballot resolutions on the proxies of eight other companies.

Institutional shareholders, including the New York City fund, also are sponsoring another round of proxy resolutions asking companies to rescind or put to a shareholder vote anti-takeover defenses such as poison pills and greenmail that were enacted without stockholder approval. Last year, institutional shareholder proposals dealing with anti-takeover measures attracted relatively strong support, and sponsors hope to do better this year.

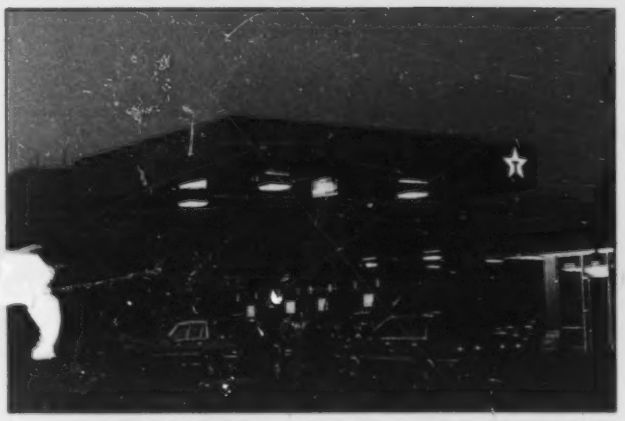
# New fund activism

## 2 play role in Texaco settlement

By Barry B. Burr



**Public funds from California and Pennsylvania had to fight to become part of the shareholders' panel that was instrumental in Texaco's proposed $3 billion settlement with Pennzoil.**

Two public pension funds are playing an unprecedented and initially unwelcomed role on Texaco Inc.'s equity securities holders committee, which has been instrumental in the proposed $3 billion settlement with Pennzoil Co.

The California Public Employees' Retirement System and the Pennsylvania Public School Employes' Retirement System are non-voting members, the first time any pension fund participated on such a committee, routinely formed to represent shareholders during bankruptcy proceedings.

Their involvement raises pension fund activism to a new height as the institutions seek new ways to assert their power as large shareholders beyond trading their stock or voting proxies. With Texaco, they are directly involved in proposing corporate policy.

"It's absolutely unprecedented," said Abbott A. Leban, the Pennsylvania fund's chief counsel and its representative on the committee. "There has never been a case where a pension fund has been on a bankruptcy committee," except when a corporate fund executive serves on his or her company's own committee.

The two funds' presence on the Texaco equity committee likely will lead to other public fund participation on such committees.

Indeed, the California fund's staff, at the request of the trustees, is drawing up a suggested policy on when the $44 billion fund should seek participation on other committees, said Richard H. Koppes, chief counsel.

"I feel it's a growing area we are keeping our eyes on," added A. Camille Nichols, investment policy coordinator at the Florida State Board of Administration.

Shareholders have until March 21 to vote on the proposed settlement, which has been accepted by Pennzoil. It calls for Texaco to pay

## LATE NEWS

### Goldman in bidding for Citicorp

NEW YORK — Goldman, Sachs & Co., New York, and Kemper Financial Services, Chicago, are among the finalists in the bidding for Citicorp Investment Management Inc., according to sources.

It could not be learned whether New York-based Goldman was bidding on the unit for itself or as an agent for another bidder.

If Goldman is seeking to acquire the unit for itself, it would represent a remarkable reversal for the securities firm, which has sought to avoid competing with its money management clients. "We won't comment on pending negotiations," rumors or speculation, said Ed Ryan, a Goldman spokesman.

A Kemper official would only confirm that Kemper is still in the running.

Citicorp is expected to come to a decision rapidly on the sale of its management unit, which has more than $20 billion in domestic discretionary assets under management.

### Bailey leaves Minnesota fund

CHICAGO — Jeffrey V. Bailey has left his job as assistant executive director of the Minnesota State Board of Investment to join Richards & Tierney Inc. starting this week.

As a vice president at the Chicago-based consultant, Mr. Bailey will work in building and maintaining normal, or customized benchmark, portfolios for investment managers.

At the $10 billion Minnesota fund, Mr. Bailey worked with Richards & Tierney, its consultant, to develop 10 normal portfolios to use as benchmarks in its performance-fee based structure for 10 equity managers.

### USF&G acquires stake in Lowry

BALTIMORE — USF&G Financial Services Corp. has acquired a 40% stake in Wm. W. Lowry & Associates Inc., an Atlanta consulting firm.

Terms of the agreement include the conversion of 40% of a note USF&G holds in Lowry into a 40% equity position in the company. The remainder of the note may be converted over time, giving USF&G 100% of the outstanding shares of the firm.

USF&G is a subsidiary of Baltimore-based USF&G Corp. Lowry, which has been the USF&G pension fund's consultant since 1982, now will advise the company on corporate equity investments. Lowry & Associates is consultant to clients representing $10 billion in assets and the holding company for the pension consulting firm Lowry, Raclin, Harrell & Howerdd, Dallas.

Michael T. Wilkinson, USF&G's president, will serve as president and chief executive officer of Lowry & Associates in the Atlanta headquarters.

### 2 shift assets and 1 creates fund

• SAN FRANCISCO — In its first such commitment, the $10 million Mary A. Crocker Trust foundation has hired WorldInvest Ltd., London, to manage a global fixed-income account, according to Richard M. Brooks, president of SFA Management Corp., San Francisco, which administers the trust.

Oechsle International Advisors, Boston, manages international equities for the fund. Assets for the hire came from a terminated equity account, Mr. Brooks said.

• TROY, N.Y. — The $185 million Rensselaer Polytechnic Institute endowment has appointed Irving Trust Co. custodian for $150 million of its assets, according to David Gonino, investment officer. Irving replaces Key Trust Co., Albany.

The balance of the endowment is in perpetual trusts managed by Bankers Trust Co., New York, and Harris Trust and Savings Bank, Chicago.

• HIGHLAND PARK, Mich. — Chrysler Corp. will use First Wisconsin Bank, Milwaukee, as depository for a trust fund to assist workers who will be laid off from Chrysler's Kenosha, Wis., plant.

Chrysler will deposit the net profits from 1988 vehicle sales in Wisconsin in the fund. Chrysler's first deposit was $1.3 million, representing January profits, a spokesman said.

The spokesman had no information on how the money will be invested; a likely possibility is an interest-bearing account that is easily accessible.

## Manager questionnaires now out

Questionnaires for *Pensions & Investment Age*'s annual issue profiling the nation's institutional money managers have been mailed out. For your firm to be profiled in the May 23 directory, please return the questionnaire by March 16 to Christine Philip, directory coordinator, *Pensions & Investment Age*, 740 N. Rush St., Chicago, Ill. 60611-2590.

If you have any questions, or have not received a questionnaire, please contact Ms. Philip at (312) 649-5217.

# Proxy pressure warning issued

## Labor Department actions spur hope about process

**By Marcia Parker**

The Department of Labor's letter to Avon Products Inc. on proxy voting procedures and a speech by a high-ranking department official together are expected to have a significant impact on the 1988 proxy season.

The consensus among institutional investors, consultants, proxy solicitors and other players is that corporate executives have been put on notice they can't pressure fiduciaries into voting management's way on issues, and that fiduciaries responsible for casting proxies will make the ultimate economic value of the stock the top consideration.

But they warn unless the Labor Department backs up this long-awaited guidance with aggressive monitoring and enforcement, the advice will be of little help to any of the players struggling to stay out of the gray areas of the nation's complex proxy system.

Some went a step further, arguing that because the department has not offered any formal guidelines, regulations or opinions, few will take the department's views seriously. At least one money manager predicted the directive "will just force this (pressure campaign) underground."

"Anyone concerned with corporate governance and the integrity of the proxy voting system will welcome this statement by the Labor Department and hope that the guidelines will be enforced. The guidelines have been a long time in coming -- it's been 14 years since (the Employee Retirement Income Security Act) was enacted," said Peg O'Hara, director of corporate governance at the Investor Responsibility Research Center Inc., a Washington group that monitors corporate governance and other issues.

"But it should now be crystal clear to everyone that any effort by corporate management to influence or pressure pension plan fiduciaries or their investment managers to vote in any way except solely in the interest of plan participants is in clear violation of the law. With institutions owning an increasing number of shares in many corporations, any guidelines that will protect their right to vote their proxies in their beneficiaries' best interests are to be applauded."

The guidance on proxy policies and procedures has been provided in recent weeks in the form of a letter to Helmuth Fandl, chairman of the Avon retirement board, outlining the role of fiduciaries in proxy voting, and a speech by Assistant Secretary of Labor David Walker. Avon's proxy voting procedures were under investigation. The department has been very careful to clarify it has not issued guidelines, only guidance.

While the Labor Department said its investigation was inconclusive, Alan Lebowitz, the deputy assistant secretary who signed the Avon letter, made it clear the fiduciary act of managing plan assets that are shares of corporate stock includes voting the proxies.

The Labor Department letter said ERISA contains no provision that would relieve an investment manager of fiduciary liability for any decision made at the direction of another person.

It also makes clear the monitoring of the activities of the investment manager with respect to the management of plan assets includes decisions made and actions taken with regard to proxy voting.

And in his speech, Mr. Walker said the ultimate economic value of the stock must be the primary consideration when fiduciaries vote their proxies (*Pensions & Investment Age*, Feb. 22). It was the first time that view had been espoused.

**Dallas-based LTV claimed in court papers filed in New York that restoring three terminated steel unit plans would endanger its reorganization under Chapter 11.**

# LTV disputes agency claim

**By Fred Williams**

Calling PBGC claims "childish and wrong," executives of The LTV Corp., Dallas, said restoration of three terminated steel unit pension plans would have a devastating effect on its reorganization under federal bankruptcy laws.

The Pension Benefit Guaranty Corp. is seeking a summary judgment in U.S. District Court in New York to restore to LTV the plans that were terminated by the PBGC early last year (*Pensions & Investment Age*, Feb. 8).

In its 73-page response, filed Feb. 22, LTV rejected each of the agency's contentions in support of restoration: that LTV's financial condition had improved sufficiently to allow the company to fund the plans; that LTV has abused the pension insurance program by establishing follow-on plans that effectively continue the terminated plans; and, by doing so, LTV has demonstrated a willingness to fund retirement programs at levels comparable to those before termination.

When supporting affidavits are added in, the filing amounts to nearly 1,500 pages.

PBGC officials declined to comment on LTV's filing; the agency had requested an extension in order to prepare its court re-

# Aetna, CIGNA CIOs resign

**By Marlene Givant**

HARTFORD, Conn. — The chief investment officers of CIGNA Corp. and Aetna Life & Casualty Co. have announced their resignations.

Richard W. Maine, a 24-year CIGNA veteran, resigned to pursue new career opportunities one month after a reorganization of its investment and pension operations. His resignation is effective March 11. Mr. Maine would not comment on his decision.

Donald G. Conrad, chief investment and financial officer of Aetna since 1970, will leave to form some type of investment business with unnamed partners, according to a spokesman. He will leave Aetna in a few months.

Neither man will be replaced.

Under CIGNA's reorganization, management of the investment and the group pension units were combined; the groups remain separate.

Mr. Conrad's duties will be divided between Patrick W. Kenny, senior vice president-finance, and Philip R. Roberts, senior vice president of investments.

During his reign at Aetna, assets under management swelled to $64.9 billion from $8.9 billion.

Commenting on the resignations, Ted Wolff, senior securities analyst with Conning & Co., Hartford, said "I'm not sure how much effect on investment policy one person has."

# Prices fall for advisory firms

## Multiples down 25% for '87 purchases

By Joel Chernoff

NEW YORK — Price multiples paid last year for investment management firms dropped an average of 25% from 1986, even though the vast majority of these acquisitions occurred before the October stock market drop.

Prices to acquire such firms were, on average, 1.8 times revenue and 1.76% of assets under management, down from 4.3 times revenue and 2.42% of assets in 1986, according to a survey by Berkshire Capital Corp., a New York investment banking boutique.

Sixteen public and private transactions involving money management firms were completed in 1987, down slightly from 18 the year before.

The industry faces increased consolidation from competitive pressures, uncertain markets and fee pressures, said Bruce McEver, president of Berkshire. But there will be continued demand for money management firms — particularly from foreign investors — if prices come down to "more reasonable levels" of two to three times revenue, he said.

Some firms were seeking price multiples of at least four to five times revenue before Oct. 19, reflecting the high prices of publicly held firms. At the market peak for publicly held money managers — late February to early March 1987 — stocks traded at an average of 5.4 times revenue, or a 20.3 price-earnings ratio.

By Sept. 19 — a month before the crash — price multiples had declined to 2.4 times revenue or an 11.3 p/e. By Oct. 20, they had dropped to 1.7 times revenue or an 8.3 p/e. As of Feb. 29, they had recovered to 1.8 times revenue or a 10 p/e.

Mr. McEver also predicted banks will continue to sell off their investment management units to raise cash, and might consider selling their personal trust units as well. Earlier this year, Manufacturers Hanover Corp. sold its money management unit to Mitchell Hutchins Asset Management Inc., and Citicorp's investment management subsidiary is on the block.

Future purchases likely will rely on securities because the 1987 tax law makes cash transactions less appealing. Under the previous law, a cash purchaser could write up assets such as client lists and depreciate them over time. Now, those assets are considered goodwill.

Foreign purchasers will step up their buying activity, aided by the weaker dollar and a desire to enter the U.S. pension market, Mr. McEver said. In contrast, "domestic people really have to do it on an economic basis," he explained.

Recently, Zurich-based Bank Julius Baer bought a minority interest in Harbor Capital Management Co. Inc., Boston, while Bank in Liechtenstein AG purchased Trainer, Wortham & Co. Inc., New York. Berkshire Capital was the adviser on the Trainer deal. While British firms have led the buying field, the Japanese companies might become important players shortly, he said.

In 1987, three U.S. money management firms — Reich & Tang Inc., Oppenheimer Capital Corp. and Thomson McKinnon Asset Management Inc. — sold minority interests to the public through master limited partnerships, now greatly restricted by the tax law. A master limited partnership also is expected this year from Alliance Capital Management Corp. All of the firms are based in New York. ■

# Survey finds wide range in earnings

By Carol Wiley

Franklin Resources Inc., San Mateo, Calif., had the largest percentage increase in net earnings — 83.5% — and Criterion Group, Houston, the biggest percentage drop — −54% — among 21 publicly held investment firms reporting earnings for their 1987 fiscal years.

Franklin reported net earnings of $58.9 million on revenue of $206.5 million for its fiscal year ended Sept. 30, up 83.5% from 1986's $32.1 million. The firm has $33 billion under management.

Criterion, with $11.6 billion under management, reported net earnings of $5.7 million on revenue of $42 million, from $12.4 million in 1986.

The data came from a survey by Berkshire Capital Corp., New York.

Berkshire defines net earnings as the company's bottom line — earnings minus taxes and expenses — and information was taken from annual reports and telephone interviews, according to Michael Kuch, financial analyst at Berkshire.

The investment banking boutique also calculated the average stock price of the management firms dropped a 35% last year, compared with the Standard & Poor's 500 stock index's 5.3% gain.

Rupert Johnson Jr., senior vice president at Franklin, attributed the increased earnings to the continued success of the firm's income and investment products.

"While the earnings increase is fine, the sales of mutual funds for all mutual fund companies have done extremely well," Mr. Johnson said.

"Our main concern is the success of our investment products and being able to offer products to meet our clients' needs."

The severe drop in Criterion's earnings, on the other hand, is a result of the poor bond market early in 1987, according to Jeff Nichols, executive vice president-corporate affairs.

"The decrease in earnings was a function of a severe reduction in underwriting income on the mutual fund side," Mr. Nichols said.

He added, however, that management fees for both the private account side and the mutual fund side "were at an all-time record high" for the year.

Franklin was followed by Eaton Vance Corp., Boston, reporting a change of 80.5%, with fiscal '87 net earnings of $11.5 million on revenue of $50.5 million, compared with $6.3 million in 1986. The corporation's fiscal year ended Oct. 31, with $5.4 billion under management.

United Asset Management Corp., Boston, the holding company of 15 investment

# Managers more malleable on fees

Money management fees are likely to remain flat in 1988, and some consultants and pension executives are finding money managers are becoming more flexible.

Except for bank trust departments, money managers have not raised their fees significantly in the past two years, according to consultants. But a few have adjusted the break points between fee levels to raise the amount at which lower fees start.

And where once a typical manager might have negotiated fees only for accounts of more than $100 million, now negotiation might be possible at $75 million or even $50 million.

In part, the lack of fee increases and greater flexibility reflect the determination of pension executives to hold down costs.

"We have not found any managers increasing their fees in either fixed income or equity," said Paul Berg, chairman of The Plan Sponsor Network, a consulting organization in Port Chester, N.Y.

"We have also found managers are more willing to negotiate fees, particularly on the equity side where performance has been disappointing."

Mr. Berg said that for one consulting client, his firm had negotiated an identical fee schedule with four managers, all of whom otherwise would have had different schedules.

"On the corporate side there has historically been little negotiation of fees," said Mr. Berg. "But corporations are now looking beyond that and are negotiating.

"There are some managers who will not negotiate, but that is becoming a more difficult stance to maintain."

"The last big burst of fee increases was in 1985," said Keith Stransky, vice president at Evaluation Associates Inc., Norwalk, Conn. "Now fees are not going up, although some managers have changed the break points."

One reason for the slowing in the rate of fee increases is that between one-third and one-half of investment counseling firms have fee schedules starting at 1%. "Few are willing to go over 1%," Mr. Stransky said.

Banks are the one area where fees have increased in the past three years, said Dave O'Donovan, vice president at SEI Corp., Chicago. As bank performance has improved, gaps have narrowed between bank fees and those of investment counseling firms, he said.

"They have largely overcome the stigma that used to be attached to bank trust departments," Mr. O'Donovan said.

But even banks probably won't be increasing fees this year, he said.

"Clients want lower fees," said Russ Wilson, a consultant with Collins Associates, Newport Beach, Calif. "We think the best way to get them is through performance fees. We have a plan to get most of our clients on to a performance-fee basis this year."

Mr. Wilson said one Collins Associates client established a maximum fee his fund would pay; one manager who would not agree to that fee was fired.

"This year clients are going to have a lot of leverage," he said, because performance has not been particularly strong.

Reflective of the new mood among pension executives, John E. Bohan, vice president-pension investments at Pillsbury Co., Minneapolis, has specified to new money managers that Pillsbury expects to be charged no more than the lowest fees the managers are charging any other client — public or private — for a fund of the same size. Pillsbury has roughly $733 million in pension assets.

"If they have negotiated a lower fee with someone else, we expect to get the advantage of that lower fee," Mr. Bohan said.

According to data provided by Plan Sponsor Network, the median fee for separate equity man-

PIPER

# Texas banks lead special equities

By Carol Wiley

An admittedly "fairly risky" investment approach put First RepublicBank's $17 million select equity fund first for the quarter, one year, three years and five years ended Dec. 31, in Pensions & Investments' Performance Evaluation Report on 104 special equity funds.

First RepublicBank, Dallas, reported stunning returns for the year — 69.5%, compared with the Standard & Poor's 500 stock index return of 5.3% and the PIPER median fund's −1.5%.

For the quarter, the fund had 4.3%, compared with the S&P's −22.5% and the median's −23.9%; for the three years, 45.3% vs. 18.1% and 12.8%; and for the five years, 39.3% compared with 16.5% for the S&P and 12.6% for the PIPER median. All figures for periods of more than a year are compound annualized.

The only period in which the bank did not lead was the 10 years; MTrust Corp., Dallas, reported a compound annualized return of 22.1% on its $22.9 million growth fund for that period. The S&P 500 returned 15.3% for the period, and the PIPER median, 16.6%.

Ben Fischer, senior vice president at First RepublicBank, said the basic investment approach is disciplined and value-oriented.

"About 150 stocks form a pool of value stocks we use," Mr. Fischer said. "From those we cull the most attractive. We are concentrating on 10 stocks or fewer at any one time. Consequently, we put all of our eggs in one basket, and there's high turnover in the basket.

"It's fairly risky, but it's been working pretty well."

Mr. Fischer is not a market-timer, but stocks are bought and sold and bought again within a short period of time because the universe is small and because stocks are sold as soon as the value increases. Stock in **Conrail**, for example, was bought and sold a couple of times last year. Stock in **Banc Paribas** was bought and sold within a month, Mr. Fischer said. Similar trading occurred in **Ashton-Tate Corp., Eastern Gas & Fuel Associates** and **IBM Corp.**

"There was a continual string of trades at the beginning of the year," Mr. Fischer said. "Before the crash, we didn't see as many as we liked so we were above average in cash. We went back into the market Oct. 20 and bought **American Bankers Insurance Group, Bankers Trust Co., Manufacturers Hanover Trust Co., Arvin Industries Inc.** and **Pfizer Inc.**" The fund now is fully invested.

"If there's nothing attractive, we just sit out for a while," he said. "You have to be sure of the market if you have only 10 stocks."

**Special equity pooled funds performance**
**(Periods ended Dec. 31, 1987)**

| | 4th qtr. | 1 yr. | 3 yr. | 5 yr. | 10 yr. |

# Bonds shine in international arena

By Joel Chernoff

Global and international fixed-income funds surpassed equity funds in the year and quarter ended Dec. 31, not surprising given the turbulent stock markets of October.

Virtually all of the top-performing funds in the Pensions & Investments' Performance Evaluation Report for the two periods were bond funds, buoyed greatly by the U.S. dollar's decline. PIPER tracks 41 international and global commingled funds of 29 banks and insurance companies.

The Salomon Brothers Non-U.S. Dollar World Government bond index soared 35.2% in dollar terms last year, while Salomon's World Government bond index rose 18.4%. In comparison, the Morgan Stanley Capital International Europe Australia Far East index rose 24.9%, while the firm's World index climbed 16.7%.

"A good part of that 35.2% (non-U.S. bond return) was currency as the dollar declined," said Richard Carr, managing director at First Chicago Investment Advisers, which manages First National Bank of Chicago's $341 million international non-dollar fixed-income fund. The fund was tops for the year with 38.7% and third for the quarter with 23.6%.

First Chicago added 151 basis points by overweighting — at 10% of assets vs. the benchmark's 2% — in Australian dollar bonds until fall, when it sold the entire holding, only to go back in during October.

It also picked up nearly 300 basis points in the Japanese bond market. When interest rates dropped to less than 3% in May, the firm shortened its maturities and trimmed its holdings to 20% from its normal 50%, positioning itself to do well when the bond market collapsed in August and September.

A $207 million foreign bond fund run by PCM International, a subsidiary of Prudential Insurance Co. of America, Newark, N.J., was the second-best international performer for 1987 and the best for the quarter, with respective returns of 37.8% and 25.1%.

PCM slightly overweighted yen-denominated bonds, with a 50% holding, while U.K. gilts also were modestly overweighted at between 15% and 25%.

Meanwhile, combined holdings of 5% to 6% in non-index countries New Zealand and Denmark also boosted returns, said Ken Windheim, director-international fixed income.

PCM also shortened maturities while interest rates were rising, and then went back into longer maturities before rates fell in October.

Coming in third for the year and fourth for the quarter was Toledo Trust Co.'s $1.6 million global bond fund, which is managed by Julius Baer Investment Management Inc., New York. It equaled the non-U.S. benchmark's 35.2% return for the year and vastly outperformed the World index, by switching between deutsche mark and yen bonds and lengthening maturities at the correct time. Its three-month return was 22.6%.

Similarly, fourth-ranked Bank of America's $40 million international bond fund — advised by WorldInvest Ltd., London — achieved 34.9% by switching between those two markets as well as investing in U.K. gilts and French franc bonds, which offered up to 100 basis points over 10-year Treasury securities. In the quarter the fund ranked second, with 24.6%.

On the equity side, the big story again was funds' Japanese weightings. The commitment to Japan plus the commitment to cash going into the drop caused a wide disparity in international equity fund returns for the year, ranging from the 29.1% recorded by Bankers Trust Investment Management Ltd., London, to the −3.5% of Toledo Trust.

Bankers Trust, whose $115 million international equity fund was the only active manager in the universe to beat the EAFE's 24.9% return, attributed its outstanding performance to superior stock selection, specifically in Japan.

In the first quarter of 1987, the manager "detected a little weakness in the yen," and started buying up export-related company stocks, such as **TDK Corp.** and **Mitsubishi Corp.**, said Lynn Minard, director of global marketing and sales. Later in the year, it took profits in those stocks, as well as in Japanese construction, housing, chemical and steel stocks. Bankers Trust still is bullish on Japan, with 43% of the fund's assets invested there.

Index fund managers dominated the rest of the 1987 equity leaders, except for Boston-based Wellington Trust Co.'s Pacific Basin fund, which returned 26.4%.

For the fourth quarter, the strongest stock fund performer was CIGNA Corp.'s $126 million international equity account, largely because of its large cash position.

CIGNA's fund, which takes a top-down approach, started building its cash position in mid-summer, rising to more than 30% by the first week in October, said Sarah Plotkin, product manager.

The risk-averse manager has switched its asset mix radically during the year, starting off with a 6.6% cash position and 45.3% in Japan; by year end, it had 47% in cash and only 12% in Japan.

The fund returned −7.6%, ranked eighth overall, following bond funds.

In the longer periods, equity funds retained their supremacy.

For the three-year period, Fidelity Management Trust's $50 million overseas equity fund was on top, with a 52.9% compound annualized return vs. the EAFE's 49.3% and the World index's 33.2%.

No fund beat the EAFE's 34.9% annualized return for the five years ended Dec. 31. The top performers were index funds run by Wells Fargo Investment Advisors, San Francisco, at 33.5%, and American National, at 33.4%; followed by active managers Bankers Trust, at 32.9%, and Bank of America, at 30.7%. ■

Cutting diamonds and managing a pension fund have a lot in common.

A diamond cutter knows that how he divides a rough stone will be the most important factor in determining its final worth.

It's the same with allocating the assets of a pension fund. Because proper allocation of assets is the single most critical element affecting pension fund investment performance.

That's why a successful fund manager, like a master diamond cutter, uses his experience and talents to maximize the value of his efforts with a minimal amount of risk.

And that's what General American's Asset Allocation Service is all about — maximizing your fund's long-term returns while minimizing risks, with a plan that's easy to understand.

So if you manage a pension fund, call Ron Drury at 1-800-325-3061 ( in Missouri 1-800-392-0017) to get all the details on General American's Asset Allocation Service. He'll be happy to show you that getting the best return on your efforts doesn't mean you have to take undue chances.

# Special equities

*Continued from page 16*

phasizing commodities and precious metals, according to Rich Collins, vice president of Citicorp Investment Management Inc., which manages the $30 million fund.

Those companies include **Royal Dutch Petroleum Co., Atlantic Richfield Co., British Petroleum Co., Alcan Aluminum Ltd., Aluminum Co. of America, Reynolds Metals Co.** and **Amax Inc.**

The fund benefited from takeovers and restructurings at **Standard Oil Co.** and **Texaco Inc.** and has increased its weightings in oil service companies such as **Dresser Industries Inc.** and **Halliburton Co.**

Larry Smith, portfolio manager of the two First Bank National Association funds, said he looks for undervalued stocks and companies with good asset values and good cash flow. The funds have holdings in **North American Philips Corp., Lone Star Technologies Inc.** and **Lukens Inc.**

The Putnam fund holds a core portfolio of small and medium-size rapidly growing companies of high quality. The remainder of the assets are invested in large S&P 500 companies that "do not necessarily have the long-term or future record the others have, but show good growth," according to Matt Weatherbie, managing director and chief investment officer of specialty growth equities.

For the quarter ended Dec. 31, First National Bank of Chicago followed First RepublicBank with a return of −10.1% and Citicorp's real estate stock fund was third with −13.5%. First National Bank of Neenah, Wis., and E.F. Hutton Trust Co., Wilmington, Del., tied for fourth place with returns of −14.7% on their respective regional bank and growth fund B funds.

For the three years, E.F. Hutton Trust followed First RepublicBank with a return of 40.5% on its growth fund B and 37.3% on its emerging growth B; First of Neenah's regional bank fund reported 25.5%; and Security Pacific Corp., San Diego, reported 23.8% on its growth fund G.

For the five years, Fidelity Management Trust Co.'s aggressive equity fund, Boston, ranked second with 21.4%; Trust Co. of the West, Los Angeles, reported a return of 19.9% on its special equity fund; First National Bank of Boston reported 17.4% on its equity yield fund; and Society National Bank, Cleveland, 17.2% on its Ohio regional equity fund.

For the 10 years, MTrust was followed by First National Bank of Maryland's special equity fund, Baltimore, with 19.7%, and First Alabama, Mobile's special stock fund with 19.1%. ■

Who offers your defined contribution plan participants the flexibility of daily telephone transfers between funds?

The same company who offers excellent investment management.

As a leading provider of 401(k) and other defined contribution plan services to more than 1,000 corporations across the country, Fidelity Investments offers a wide range of investment management and client services designed to meet the needs of both you and your employees.

**A Wide Array Of Nationally Known Funds.** With more than $70 billion in assets under management, Fidelity offers a broad choice of professionally managed mutual funds ranging from equity funds like Fidelity Magellan Fund and Fidelity Equity-Income Fund, to money market funds and GIC's. The funds are available on a *no-load* basis to plans with more than 200 eligible employees. And, as market conditions or personal investment objectives change, plan participants have the flexibility to transfer their investments among available mutual funds by telephone on any business day.

**Comprehensive Recordkeeping.** Fidelity's recordkeeping services are designed specifically to reduce your administrative burden.

Not only can your employees call us directly to transfer existing balances, they can also redirect future contributions by telephone. Our state of the art system and experienced employee benefit professionals work to ensure timely and accurate reports for both you and your employees.

**Employee Communications Support.** Fidelity will work with you to develop the communication materials needed to support your employees from enrollment through retirement. We'll help you explain your program and the available investment options clearly and effectively. In addition, your employees can call toll-free 24 hours a day, seven days a week and talk with a knowledgeable Fidelity representative about available investment options.

For more information about Fidelity's defined contribution plan services, including fund prospectuses covering management fees, expenses, and applicable sales charges, please call Jeffrey Paster, Corporate Market Manager, at 1-800-345-5033. In Massachusetts call collect 617-570-5692.

# Beat the S&P

*Continued from page 1*

again. Moran recommitted its cash in seven waves until the end of the year, generally buying the stocks it had cut back before Oct. 19.

As an example, Mr. Moran cited **Telecommunication Inc.**, a cable television company the money management firm bought in the midteens and sold before the crash in the high 20s. "After the crash, we bought it back between 17 and 20 and the stock is now at about 26," Mr. Moran said.

Portfolio Timing Inc., as its name implies, is a market-timing manager. It uses a computerized money flow index that tracks institutional money flows into and out of various parts of the market, said Les Cathersal, vice president.

The firm, which has $15.2 million in tax-exempt assets under management, invests in no-load mutual funds, and moves in and out of the market about five times a year, Mr. Cathersal said.

Portfolio Timing became fully invested at the beginning of 1987, got out of the market in spring, got back in in summer and sold out Oct. 7. It then stayed out until Dec. 15 when it re-entered the market and picked up five or six percentage points before the end of the year, Mr. Cathersal said.

PSM Investors, also a market timing firm, manages $340 million in tax-exempt assets by buying into and out of mutual funds based on signals from a timing model that looks at stock market conditions.

According to Stan Lipstadt, chief investment officer, the firm received only one timing signal in 1987, on April 6, and that was a sell signal.

"Either that day, or the day after, the market hit 2,400 on the Dow (Jones industrial average) and then retreated before going up to 2,700," Mr. Lipstadt said. "We sold and were out of the market from April on. We missed everything from then until Oct. 19."

Mr. Lipstadt said his firm is still out of the market, but he expects a buy signal soon.

Lincoln National had two portfolios that beat the S&P 500 by more than 500 basis points — the emerging growth equity fund, which was up 31.4%, and the select equity fund, which was up 13.6%.

The emerging growth fund buys companies with capitalizations of $300 million or less that have earnings growth of more than 20% per year for the previous three years and with price-earnings ratios below the p/e of the industry.

If Lincoln can't find stocks that meet these criteria, it stays in cash. And if a stock no longer satisfies one of the screens, it is sold. As a result of both of these factors, the fund was 70% in cash in July.

However, after Oct. 19 it found good values and reduced its cash position to 50%, said a company official.

Citicorp Investment Management beat the S&P 500 by more than 500 basis points with three commingled and one separately managed tactical asset allocation accounts. The accounts move between stocks and cash, or stocks, bonds and cash, based on nine monetary, value and sentiment indicators.

The best performing account was a $140 million separately managed account run according to the Stockshift 200 strategy, which overlays futures on an index fund to achieve up to a 200% invested position. This account gained 29.6% for the year and has a three-year compound annual return of 31.4%.

The fund started the year 200% invested and dropped to 100% invested by the beginning of September. By Oct. 16 it was 60% invested and went back to 100% invested Oct. 21, finishing the year at 160% invested. It is now 180% invested.

The $40 million commingled account run by the same strategy, but more conservatively, was up 18.4% for the year. It has no three-year record.

Citicorp's Assetshift 50 commingled fund, with $35 million in assets, gained 14.4% for the year. This is a tactical allocation portfolio that varies among stocks, bonds and cash. After starting the year at 75% stocks and 25% bonds, it moved to 40% stocks, 50% bonds and 10% cash Oct. 13 and finished the year at 55% stocks and 45% bonds.

The Stockshift 100 portfolio, which simply moves between stocks and cash, was up 12.5% for the year. It began the year 100% invested and on Sept. 30 it was 80% invested. ■

# S&P issues expand lead

## Beat others by 600 points

By Joel Chernoff

Stocks in the Standard & Poor's 500 index boosted their performance over similar non-S&P stocks last year, beating them by six percentage points.

More than one-third of the difference occurred during the fourth quarter alone, showing that the phenomenon — which started in 1980 — actually increased during the market crash.

"What happened during the crash is that S&P stocks corrected less than non-S&P stocks," said William Jacques, chief investment officer of Martingale Asset Management, Boston. Martingale and BARRA, a Berkeley, Calif.-based consulting firm, analyzed the S&P data.

The advantage of being included in the S&P 500 is drawing increasing attention from investment experts and pension executives. If the phenomenon continues, the implications are enormous for investors, issuers and financial markets alike.

But some are not convinced. "I don't think there's any content to these kind of results," said Steve Ross, principal in Roll and Ross Asset Management and Sterling Professor of Economics and Finance at Yale University. He said one would have to wait more than 20 years to see if the phenomenon is more than "a ghost" in the data.

The issue is separate from the debate on the merits of investing in small-capitalization vs. large-cap stocks. Many pension executives are pondering whether smaller-cap stocks are set for a rebound after a lackluster performance during the bull market, and whether their equity portfolios contain enough small-cap stocks from an asset allocation perspective.

Rather, this issue focuses on whether inclusion in the S&P will cause a difference in performance for stocks of equivalent capitalization.

In earlier research, BARRA and Martingale found S&P stocks beat their counterparts by an average of 3.25 percentage points a year in the 7½ years ended June 30. That gap has widened to 4 percentage points a year with the inclusion of the full-year 1987 data, according to Mr. Jacques.

Investment experts have attributed the difference to the growth in indexed stock funds, development of index futures and their use in program trading strategies, and more recent inflows of funds from foreign investors, particularly the Japanese, who tend to focus on the best-known stocks (*Pensions & Investment Age*, Sept. 7).

Since then, additional research and developments have emerged:

- The "membership anomaly" also pertains to foreign markets. Membership in the Morgan Stanley Capital International index in Japan made for a difference of 25 basis points per month in the 6½-year period ended June 30, according to BARRA.

"It appears the most likely cause for this phenomenon has been the increased international investment by U.S. institutional investors," according to a BARRA newsletter.

# ESOP notes enrich Enron

## $95 million to prepay bank loan

By Brad Rudin

HOUSTON — Enron Corp. has sold a $95 million issue of securitized employee stock ownership plan notes in a private placement that enables the energy company to prepay a bank loan used to finance the ESOP's purchase of Enron common stock in 1986.

Securitized ESOP notes are high-quality, floating-rate instruments sold to banks and other financial institutions that enable ESOP plan sponsors to refinance loans used to purchase the stock (*Pensions & Investment Age*, Dec. 14).

The Enron ESOP owns about 20% of the company's common stock. In 1986, the ESOP borrowed $335 million to buy 8.7 million shares. All but $95 million had been repaid prior to the notes' issue, said Mark Koenig, director of pension investments at Enron.

The securitized ESOP notes, due June 30, 1993, were placed last month by Bankers Trust Co., New York, which also serves as remarketing agent and trustee.

Bankers Trust calls its securitized ESOP notes FRESOPS, or floating-rate ESOP

# Mortgage woes grow

## Insurers plagued by non-performing loans

By Fred Williams and John Covaleski

Non-performing mortgages held by insurance companies nearly tripled in two years, and those held by The Travelers Corp., Hartford, Conn., are almost triple the industry average.

Because mortgages back many of the guaranteed investment contracts purchased by institutional investors, analysts and industry insiders say investors should concentrate not just on returns, but on the underlying investments made to attain the returns.

Non-performing mortgages among 21 carriers climbed to 3.23% of the insurers' total mortgage portfolios as of Dec. 31, vs. 1.16% as of Dec. 31, 1985, according to the American Council of Life Insurance, Washington, in part because of heavy concentration in the Energy Belt. At Travelers, non-performing mortgages hit 10% as of Dec. 31, according to a report by First Boston Corp., New York.

(Non-performing mortgages are 60 days or more past due on non-agricultural loans, and at least 90 days past due on agricultural loans.)

By comparison, Mutual Life Insurance Co. of New York, New York, reported 2% of its $4.2 billion mortgage portfolio was non-performing at year end, and Phoenix Mutual Life

## LATE NEWS

### Executives change positions

Axel H. Swanson III, vice president and treasurer at National Gypsum Co., Dallas, will retire March 31 after 30 years at the company. He will be replaced by Paul T. Even, assistant treasurer. Mr. Even joined National Gypsum in 1971 and has also served as manager-cash and investments and as audit manager. He also is president of the National Corporate Cash Management Association.

In Olympia, Wash., David Weig has been named acting director of the $13 billion Washington State Investment Board. He fills in for outgoing executive director, John A. Hitchman, who is resigning effective March 31. Mr. Weig, who was Mr. Hitchman's deputy director, said a search is under way for a permanent replacement, with resumes being accepted until April 15. "I am considering putting my name in for the permanent job," he said.

### Mitsui, Scudder sign agreement

NEW YORK — The Mitsui Trust & Banking Co. Ltd., Tokyo, and Scudder, Stevens & Clark Inc., New York, will embark on a long-term cooperation agreement. The two firms will exchange trainees and hold semiannual formal investment discussions in New York or Tokyo.

Mitsui will assist Scudder in marketing in Japan and explain the workings of specified money trusts, or "tokkin." Scudder, which manages $36 billion in assets, will further Mitsui's understanding of the organization and operation of U.S. investment companies and develop the firm's U.S. equity and fixed-income capabilities.

### Cabot joins NYSE pension panel

NEW YORK — Walter M. Cabot, president of Harvard Management Co., Boston, has been appointed to the New York Stock Exchange's pension managers advisory committee, rounding out the 20-member panel. The other 19 members were named last month. Its first meeting is March 24.

### Presbyterian fund shifts assets

PHILADELPHIA — The Board of Pensions of the Presbyterian Church (U.S.A.), with $1.9 billion in pension assets has terminated one manager and moved some money around temporarily until new specialty managers are hired, according to Wm. Irwin Arbuckle II, vice president-investments and treasurer.

Mr. Arbuckle said the board had terminated a $45 million aggressive growth account with Fred Alger Management Inc., New York, and moved the money temporarily to an extended market index account with Wells Fargo Investment Advisors, San Francisco.

He said the move was spurred by the board's desire to shift strategies to a small-cap portfolio. "Alger was an excellent aggressive growth manager. We felt the life cycle of that style was over for us and it was time to make a change."

Callan Associates, San Francisco; Debatin & Associates, Atlanta; Cambridge Associates, Boston, and Mellon Measurement Service are consultants.

# Institutional investors are study's focus

## Corporate role scrutinized

By Marcia Parker

NEW YORK — Columbia University has begun a major long-term effort to explore the role of the institutional investor in large publicly owned corporations.

The project, based at the university's Center for Law and Economic Studies, is getting off the drawing board at a time when institutional investors — the biggest stockholders in companies — are wrestling with what role they want to play in corporate America.

Once passive stockholders, institutions have in recent years become activist stakeholders, anxious to make sure management hears their views and feels accountable. But these investors have not yet defined how they wish to translate ownership into action.

The co-founders of the center — Ira Millstein, a senior partner at Weil, Gotshal & Manges, a New York law firm, and Louis Lowenstein, Columbia University Law School professor — cite several other pivotal trends that sparked their efforts to devise the project: the public debate over unprecedented levels of merger activity; the conflict about shareholder voting rights; and the growing importance of pension funds and other institutional investors.

In addition, they say the October market crash heightened awareness of concerns regarding the volatility of capital markets and the growing tensions in the relationships between fiduciaries and money managers on the one hand and boards of directors and officers of corporations on the other.

The founders of the Columbia project, which will involve a series of parallel studies over a period of several years, hope their work will become an ongoing focal point for data collection, research and analysis on the interaction of American industry and institutional investors. They are still working out a draft for the project, which is expected to change as they get input from board members.

Based on the initial draft, one aim is to fill the substantial gaps in the knowledge of how fiduciary trustees and professional money managers select, hold and vote shares, and their perception of their various roles in the securities markets.

A second objective is to study other financial systems, particularly England and the so-called bank-based systems of West Germany and Japan, to understand the interaction of corporations and institutional fiduciaries and money managers and how their experience might apply to the United States.

The third goal is to develop a discussion between fiduciaries and fund managers and corporate boards and officers concerning such critical issues as when and how institutional holdings are acquired and disposed of, voting patterns of institutional holdings and fiduciary obligations of trust-

# Rate indexes premiere

*Pensions & Investment Age* will publish each month market-related interest rate indexes developed by two consulting organizations to calculate unfunded pension liabilities.

Buck Consultants, New York, and Ennis, Knupp & Associates Inc., Chicago, created the indexes in response to the Financial Accounting Standards Board's Statement 87, which required companies to calculate unfunded liabilities using a market-related interest rate but did not specify what the rate should be.

The two organizations developed the indexes in different ways.

The Buck Forward Rate Index, as its name implies, is based on forward rates. A forward rate is the price at the beginning of the year, expressed as an interest rate, of a unit of cash flow that will be received at the end of the year.

Buck bases its index on the forward rates for U.S. Treasury securities. The forward rates based on the term structure of interest rates on Treasuries are applied to the cash flows of a model pension plan to determine the present value of benefits. A calculation is then made to determine what single interest rate will produce the present value. Separate calculations are made for active employees and retired employees, and the weighted average of these two rates is the Buck Forward Rate Index.

The Ennis Knupp & Associates Settlement Rate Index is based on the annuity rates used by insurers to price pension obligations of companies that wish to terminate their pension plans. This rate has become known as the settlement rate.

Because insurance companies set their rates independently, based on the demand for their assets, current interest rates and past settlement rates, there is no universal settlement rate.

Ennis Knupp uses an algorithm to estimate current settlement rates from long-term bond rates and historical settlement rates. The latter are supplied by a number of insurance companies active in the group annuity market. ■

GLOBAL INSTITUTIONAL INVESTORS

# Choices after October

## With some exceptions, home is where assets stay

By Marlene Givant

While all global institutional investors pulled some assets home following the stock market crash, the Japanese are readying to send parcels abroad.

Japanese institutions still have massive amounts of capital to invest, and their trade surplus situation will mandate a return to foreign markets. Observers think the Japanese might take several courses:

- boost non-Japanese equity commitments to approximate last year's projected net of $17 billion;
- resume foreign bond purchases to the 1986 level of $93 billion, compared with the 1987 level of about $74 billion;
- increase direct foreign investment at a faster clip than securities purchases.

Meanwhile, European investors are catching their breath and staying put. The drop in equity prices in Europe probably will cause a drop in net inflow in the domestic equity markets and benefit the bond markets in 1988, according to a flow of funds report from Banque Paribas Capital Markets, London. Already, European investors are shifting domestic assets into bonds.

Foreigners are expected to sharply reduce equity investment in the Continent given its weak growth prospects. In addition, a 10% withholding tax on West German domestic bonds proposed for 1989 could adversely affect the flow of outside funds into that area. That money could be directed instead to Swiss or Dutch bonds.

U.S. investors — notably pension funds — however, are continuing to buy foreign securities and following through with plans to diversify overseas, according to Danielle Kadeyan, vice president of Salomon Brothers International Ltd., Tokyo.

But no global institutions are expected to match the Japanese in terms of range and growth of foreign investments in 1988.

Although stock markets crashed worldwide just as Japanese institutions were making their first sizable move into foreign equities, the Japanese are eyeing foreign stocks again, especially in the United States.

And with a steadier dollar, Japanese institutions are likely to resume purchases of foreign bonds, particularly U.S. government issues. (Foreign exchange and interest rate uncertainties sent Japanese investors' January net purchases of foreign bonds to their lowest point since March 1984, totaling $1.34 billion, down 33.3% from the previous month, according to the Ministry of Finance.)

Japan's $96.5 billion 1987 trade surplus will mandate Japanese foreign investment, especially in the United States.

"It's double-entry bookkeeping. . . . In practical terms, we need bilateral flows from Japan to the U.S. to solve both countries' trade imbalances," said Robert Brusca, chief economist and senior vice president of Nikko Securities Co. International Inc., New York.

Indeed, investment patterns that emerged in 1987 are unlikely to cease in 1988.

Japanese direct investment abroad increased each quarter in 1987, with nearly 30% of the outflows in the fourth quarter, said David Strongin, director of international finance of the Securities Industry Association, New York, and author of a report on Japanese investing.

John Calverley, senior economist of the American Express Bank, London, likened the vast scale of direct investment out of Japan to the U.S. expansion overseas in the 1960s. "The Japanese are becoming high-cost producers because of the high value of the yen," he said. "They want manufacturing operations in the U.S. and developing countries where there's cheap labor."

Japanese net purchases of foreign stocks in 1987 swelled to $17 billion from $7 billion the previous year, with about 65% to 70% in U.S. equities, the SIA report said.

In the first three quarters of 1987, the Japanese accounted for 40% of foreign net purchases of U.S. equities before declining in recent months, according to U.S. Treasury data.

The Japanese eventually might surpass U.S. investors in terms of gross equity activity away from home. In the first three quarters of 1987, Japanese foreign gross investment accounted for 30% of total foreign equity activity vs. 25% in 1986. The U.S. number posted a meager rise to 38.8% from 37.4% during the period, the SIA report said.

Foreigners, in turn, are reversing their strategies in Japan. After driving their representation down to 2.5% of the Tokyo stock market at the end of December from 4% before Oct. 19, foreign investors have

### World's markets, investors examined

**Institutional investors have dominated the markets around the world throughout the 1980s. As U.S. institutions devoted an increasing portion of their assets to foreign investments, information on other markets and their investors has become vital to investing knowledgeably.**

**Now, investors are asking whether the 1987 crash spelled the end of global investing.**

**Have institutional investors retreated to their domestic markets for good? What are the implications for U.S. markets? What developments and trends are occurring around the world that affect institutional investment?**

**To explore these and other issues, *Pensions & Investment Age* presents a state-of-the-art look at institutional investing in nine countries: Japan, the United Kingdom, West Germany, Switzerland, France, Italy, Spain, the Netherlands and Australia.**

**These countries have the largest equity markets and the best-developed pension systems outside of North America.**

**What's going on in their markets and among their institutional investors has tremendous implications for U.S. investors — both in their own markets and abroad.**

# Explosive Japan looking overseas

By David Kilburn

TOKYO — Japanese institutional investors cut their teeth in the equity markets through "tokkin" accounts. Now, like toddlers learning to walk, they might have to relearn their lessons after the tumble they took last year.

Nevertheless, the growing role of Japanese institutions in global equity markets won't be reversed.

"There simply are not enough instruments available in Japan to absorb the money available. This is one of the main forces behind overseas investment by the institutions. This same pressure is also a reason why the (Tokyo Stock Exchange) can go up at such an incredible pace," said Anne Cabot, senior marketing manager at Sanyo Securities Co. Ltd., Tokyo.

Tokkin funds, which are vehicles for the investment of surplus corporate assets, led the change in institutional investors from cautious bond investors and long-term holders of corporate equities to more active equity players.

Boosted by burgeoning corporate surpluses, the tokkin and related fund trust accounts have surged in the past three years, to $229 billion in November 1987 from $21 billion in March 1985, according to Japan's Trust Bank Association.

Traditionally, corporations purchased strategic holdings in companies with which they did business, but did not trade them. But the tokkin money, held in separate funds, permitted companies to experiment with different investment strategies.

The result was a fantastic level of trading, including what some believe were speculative excesses. According to an analysis by Masanobu Takahashi, research director of Sanyo Securities, trading by tokkin and fund trusts accounted for about 15% of the total floating supply of equities in 1986, with portfolio turnover ratios up to 300%.

The importance of these funds to the $3 trillion Japanese stock market has become clear: threats of stock sales by the funds inspired the Ministry of Finance to take two crucial steps in January.

To prevent such sales, the ministry eased accounting requirements for tokkin and fund trust accounts, and permitted life insurance companies to boost their tokkin accounts to 5% of assets from 3%. It also postponed a rule change so losses on tokkin holdings could be diluted by unrealized capital gains in long-term securities holdings.

Since August, however, the flow of new money into tokkin funds has slowed, as more corporate cash has been poured into capital investment.

But if tokkin fund growth is slowing, Japanese pension funds are taking off. Both domestic and foreign firms are elbowing to break into the $190 billion corporate pension fund market. While only trust banks and insurance companies can manage the funds, brokers and national banks are seeking permission to provide investment advice to the market, which is expected to reach $255 billion by 1990.

Meanwhile, the Health and Welfare Ministry has proposed legislation allowing pension funds with more than $150 million (20 billion yen) in assets to manage up to one-third of assets internally.

The growth of all types of Japanese institutional investors has led to long-reaching changes in investment approaches.

# British taking few chances

By John Westwell

LONDON — Despite the U.K. stock market's woeful performance in 1987, British institutional investors think the domestic market is the place to be in 1988.

While they have shifted assets to British stocks from foreign equity markets since October, they are playing the market very cautiously.

"The message is we seem to be on course for a soft landing but not for a collapse," said John Shelley, director of London-based MIM Britannia, which has $2.07 billion under management.

David Barker, director of merchant bank Hill Samuel Group Ltd., London, with about $24.4 billion under management, said both U.K. stocks and real estate are cheap at today's level but he is concerned the market is unlikely to make any rapid recovery in the next few months.

While he thinks the stock market will be higher next year, at the moment trading is "definitely sluggish and nervous."

"Flat" is the verdict of Donald Brydon, director of asset management at Barclays de Zoete Wedd, London. The strategy at BZW, which is the investment arm of Barclays Bank PLC and has $19 billion under management, is "defensive and well-diversified," Mr. Brydon said.

British pension funds, with an estimated $450 billion in assets, have kept up their strong commitment to stocks. The Wyatt Survey of Pooled Pension Funds shows British fund managers had 74% of assets in stocks at the end of 1987, down minimally from 75% at the beginning of the year.

The big change, according to Wyatt, was that U.K. equities increased to 58% of total assets from 53% while foreign equities dropped to 16% from 22%.

This commitment to British stocks comes despite the U.K.'s dismal performance since October. The Financial Times-Stock Exchange 100 index has fallen 386.9 or 17.6% since Oct. 15 to its March 11 closing of 1,810.4. This represents a recovery, however, of 249.9 points, or 16%, from its low Nov. 9 of 1,565.2.

Just as important is the falloff in trading volume. In the week before the crash the average number of shares traded per day was 594 million, with an average value of shares traded of $3.76 billion. By the week ended Feb. 26, these figures had slumped to 394.14 million and $1.95 billion respectively.

At the end of 1987, there were 2,061 domestic equities with a market capitalization of $635.7 billion traded on the International Stock Exchange (formerly the London Stock Exchange). There also were 126 securities traded on the gilts (government bond) market with a combined value of $249.7 billion.

In the U.K. equity market, life insurance and pension funds own about one-half of outstanding equities while unit trusts, general insurance companies and investment trusts account for a further 10%, according to Salomon Brothers Inc., London.

Unit trusts in particular have soared, growing more than 500% between 1981 and 1986, to $48.6 billion.

Given about 60% of all transactions are conducted between marketmakers, that suggests institutional investors are unwilling to commit themselves to the equity market, although the experts are not in accord.

Executives at Capital House Investment Management Ltd., a wholly owned subsidiary of the Royal Bank of Scotland Group PLC, which manages more than $3.6 billion, including $2.52 billion in pension assets, point out equities have provided long-term returns well above those in cash and bonds.

A typical asset allocation for a Capital House client as of this month was 63.5% in U.K. shares and convertible securities, 18.5% in overseas securities, 7.5% in fixed income and 10.5% in cash.

But some managers are looking more to bonds than they have in a long time.

"We advised clients to put 40% into gilts 18 months before the crash," said Piers Mount Stephens, a director with pension fund responsibility at C.S. Investments Ltd., London, which has $900 million under management.

"There appears to be a lot of cash now available in the pension funds but nobody knows what to do with it. If pension fund managers commit it to bonds, it would be an admission that they got it wrong to start with," he said.

Although investments by U.K. funds into real estate have been on the decline — a typical allocation in a major fund ranged between 5% and 10% in October, down from an average 21% in 1981 — perceptions might be changing.

"After the twin October hurricanes (an actual hurricane Oct. 16 followed the financial one Oct. 19), property is once again seen as a more stable form of investment," said Nick Ryan, secretary of the $360 million Superannuation Arrangements of the University of London. "Now that some of the glamor has gone out of equities, we should seriously be studying the property markets."

The fund's exposure to property has been limited to pooled investments, Mr. Ryan said. "But with the advent of unitized single property instruments (similar to real estate syndications) in the U.K. expected later this year, SAUL and other funds see new opportunities for direct property investment," he added. ■

# Glimmer for equities

## Germans take a gamble on stock market

By Peggy Trautman

BONN, West Germany — Contrary to many investors, West Germany's traditionally conservative institutional investors have increased their stock positions in the wake of Oct. 19.

While that might seem surprising, at first, it's not: German institutional investors — mostly life insurance companies and pension funds — now have invested 8% to 9% of assets in stocks, up from about 6% before October.

But any increase in stock holdings is welcomed by analysts — especially in light of the drubbing investors took on the German exchanges. West Germany was one of the worst-performing markets in 1987, dropping 33.4% from Oct. 15 to year end.

German investors, both institutions and individuals, remember the losses of the post-war years and are closely tied to bonds.

Now, although individuals still are holding back, institutional investors are finding stocks more attractive.

"Since stocks were basically cheap (after the crash), it reduced the attractiveness of competing investments," said Siegfried Hoecker, head of equity investment for Capital Management International GmbH of Deutsche Bank, Frankfurt, which manages $2 billion in discretionary assets for foreign and domestic clients.

West German investors made net stock purchases of $8.99 billion in 1987 — of which $8.73 billion were made in the last quarter. Most of those purchases probably were made by institutions, which owned 83% of all German stocks as of year-end 1986 (the latest data available). The remainder was held by individuals.

Institutional investors' willingness to take a bigger bet on stocks also might stem from a fundamental change in attitude.

"They are becoming conscious of the fact that it doesn't make any sense to jump in and jump out," said Ekkehard Scheid, a partner in Portfolio Management GmbH, Munich, which manages $190 million in assets.

Hans-Dieter Runte, managing director of BHF Trust Management MbH, Frankfurt, which manages $3.8 billion in discretionary assets for foreign and domestic clients, agreed. He noted institutional investors were not nearly as cautious after the crash as many observers had feared, reflecting their long-term commitment to the market.

West German institutions also are running counter to the traditional notion of "witschaftswunder" — that is, when the Germany currency is strong, export-reliant corporate profits are weaker. Thus, German investors typically flee to bonds when the deutsche mark is strong.

Fortunately for the West German market, this change in attitude revealed itself as foreign investors fled during the crash.

Foreign investors were net sellers of $1.5 billion in stock, and many — especially the British and Swiss — are slow in returning. And it's not clear when foreign investors will come back.

West Germany's planned 10% withholding tax on income and dividends might deter foreign investors. It already is driving up pricing, causing yields on domestic debt instruments to increase by 25 basis points in February, according to the Bundesbank, the country's central bank.

Foreign investors also fear the deutsche mark's increase against the dollar will harm German exports. If the exchange rate holds at the 1.70 level, economists figure German industry will get by; but further dollar depreciations would be bad news for the market, said Capital Management International's Mr. Hoecker.

But the most important investors are the banks, which were forced into the role of dedicated marketmaker or willing speculator — depending on opinion — immediately after October's panic. Banks, which have $1.8 trillion in capital, bought $320 million in shares. Later, when a downward trend was evident, they sold $570 million in stocks to cut their losses.

Now the banks would rather return to government bonds, where returns are high and risks low. However, it might be too soon. "Even if one bank were to sell (its stock holdings), the bourse could fall all over again," one major bank official said. "And the expected rebound has not been quick in coming." ■

# Spanish growth wild

By Paul L. Montgomery

MADRID, Spain — In the Spanish equities market, the highs generally are higher than the world average, but the drops are just as precipitous.

After racking up gains of 322.8% from July 1982 until the October crash, the Madrid exchange lost about 24.4% of its value by Nov. 13, but by March had recovered about half the losses.

Gains have continued, and with analysts finding most economic indicators favorable in Spain for continued growth, the outlook is for another record year on the exchange.

But with only a fledgling pension fund industry to provide stability and the highest economic growth rate in Western Europe, playing the market in Spain is a game for experts.

Spain, which joined the European Community with Portugal at the beginning of 1986, is already benefiting from its new associations. Spain's growth rate in 1987 was 4.1%, compared with the European Community average of 2.2% and the United States' 2.3%.

The estimate for 1988 is 3.7% in Spain, according to the European Communities Statistical Office. Part of the reason is that Spain has had further to come, but Spain also is in the midst of an economic boom.

Big banks are still the major stockholders in Spain, but foreign buyers, investment funds and the young pension industry are all making inroads. It was estimated foreign buying on the major exchanges last year rose 80% after a similar rise in 1986, although the total foreign purchases are still less than $2 billion.

Easing restrictions on foreign investors in May 1985 has helped. Foreign investors tend to be British, German, Dutch or Belgian, but last year there was a considerable influx of money from the Middle East, particularly Kuwait.

Spain's Socialist government has encouraged private initiatives in many areas, including private and union pension funds. Although institutional investors probably account for less than 10% of the Spanish market, the number is growing, said Jaime Montoya, president of Seguros Madrilenos, a Madrid-based investment fund consultant.

The government sees the pension funds as a way of channeling savings into industrial growth, although the funds have tended to diversify more into short-term government bonds since October. Insurance companies have moved aggressively into the pension fund market and expect to have 50% of the pension business by 1990. ■

OLYMPIC TRUST

# Dutch market vibrant

By Paul L. Montgomery

AMSTERDAM, Netherlands — Old-timers on the Amsterdam Stock Exchange remember the prewar years, when the market was the world's most important after New York and London, and the oldest of the three.

The 50 years since then have seen many changes in institutional investors' attitudes, but the trading floor is still one of the most vibrant in Europe.

Amsterdam in the 1980s has seen an influx of outside investors trying to get monetary stability and undervalued equities. The market's price-earnings ratio rose to a peak of 13.7 in July 1987 and ended the year at 8.9, up from 5.9 at the end of 1982. That compares with a year-end average p/e of 11.4 for all European stocks.

Before Black Monday, it was estimated 50% of the turnover in the $74 billion stock market was accounted for by foreign investors, primarily from the United Kingdom, Switzerland and the United States. Since then, Japanese investors have increased their investments, overtaking U.S. investors who trimmed Dutch holdings.

But there is still a steady influx of interest from foreign investors seeking protection from dollar swings, steady returns and low-risk ventures. The market chalked up a 213.4% gain from July 1982 to the October drop, compared with the European average of 233.3%.

What makes the Netherlands different from other European investment climates is the power of pension funds and insurance companies, providing an anchor in such times of trouble as last October.

At the end of 1987, it was estimated the insurance companies and pension funds had almost $225 billion in capital, more than the net national income of $213 billion.

It is estimated institutions hold 15% of Dutch equities, while citizens hold 35% and foreigners 50%.

While it is true most of the pension capital goes into real estate and fixed-income securities, the market perked up in early 1988, rising 9.2% in the first two months, with institutional capital as a strong support. Private pension funds doubled their allocation to equities between 1980 and 1985, rising to 11.7% from 5.7%, according to government statistics.

Meanwhile, the loosening of government restrictions by the center-right government of Prime Minister Ruud Lubbers has presented opportunities for further opening of the market. ■

# Bad days for stocks

## Australia pulls hard toward conservatism

By Geoffrey Lee Martin

SYDNEY, Australia — Domestic and foreign investors have pulled back from equities in the wake of the Australian market's horrendous October performance.

"There can be no doubt about it, the market has swung more toward conservatism," said Nigel Weaver, investment manager at Capita Financial Group Ltd., Sydney.

And foreign capital has fled the Australian stock market. TPF&C inc., Sydney, estimates foreign investors held between 25% and 30% of the market Sept. 30, but now hold between 7% and 10%.

Only in the past few weeks have foreign investors shown renewed interest in the Australian stock market, observers said.

Once one of the high-flying markets, the market fell 44.7% in October, according to the Morgan Stanley Capital International World index.

The institution-dominated market had risen 381.3% from July 1982 until the October drop, according to Morgan Stanley Capital International, New York. The market, which stood at $132 billion in U.S. dollar terms as of Sept. 30, plunged to $83 billion by year end.

But it has since recovered to $100 billion by the end of February, Morgan Stanley statistics indicate.

The October drop was especially hard on gold and other resource-related stocks. Because the Hong Kong and Singapore markets were closed the week of Oct. 19, foreign investors seeking to unload non-Japanese Pacific Basin stocks had only Australia open to them, said Brian Sherman, chairman-joint managing officer of Equitilink Australia Ltd., a Sydney-based money manager.

Since October, most Australian money managers have lightened their equity commitments, largely in response to pressure from clients.

As of Jan. 1, holdings of Australian stock had dropped to 29.1%, down from 36.3% on Oct. 1, according to a survey of pooled funds of major Australian managers by The Wyatt Co. Proprietary Ltd., a Sydney consulting firm.

Holdings of overseas equities also fell, to 20.2% from 23.2%, while domestic fixed-income holdings rose to 25.7% from 21.5%, international fixed-income increased to 1.5% from 0.3%, property grew to 15.7% from 13.7%, and cash increased to 7.8% from 5%, the survey found.

While much of the decline in stocks stems from the fall in market values, some managers have cut their equity allocations, explained Colin Westman, Wyatt's managing director for the Sydney office.

Managers have fled to blue-chip stocks. Since the crash, "second board" listings are not marketable, Mr. Westman said. "The emphasis is much more on fundamental value, getting away from using charts, using horoscopes," he said.

But the drop in equity holdings might have come at the worst time, if the market resumes its upward course, as it has in recent weeks, some said.

Some are betting on the revival of the Australian market.

Rothschild Australia Asset Management Ltd. has 45% of pension assets in domestic stocks. In the long run, equities will outperform other assets classes, and pension funds can afford to take the long view, said Peter Griffin, chief executive. The Melbourne-based firm runs $3.2 billion in pension assets.

One of the most aggressive investors is Equitilink, which has a 66% equity position, four-fifths of which is in Australian stocks. The firm manages nearly $1.9 billion in total assets, of which about 20% is pension assets.

Mr. Sherman bases his belief the market will surge on several factors: a drop of 200 basis points in long-term interest rates since the crash; the Australian budget surplus; the decline during the past three years in the current account deficit; and the inflation rate, which has fallen 300 basis points during the past year to 6.5% to 7% level.

But there might be a cloud on the horizon for the $45 billion to $60 billion Australian pension market.

To offset an expected cutting of the corporate income tax rate, the government has signaled it might seek some type of tax on funds.

But any word on that likely will wait until after the Australian government issues its midyear budget proposals in May. ■

# Change hits France

By Paul L. Montgomery

PARIS — Financial markets in France are in the midst of a revolution almost as far-reaching as the "off-with-their-heads" version of 200 years ago.

France has been privatizing nationally owned companies, increasing the number of individual shareholders. At the same time, market reform is helping the traditionally protected French market prepare for the barriers-down European economic integration scheduled to start in 1992. And development of a private pension system will increase savings and investment.

When the Conservative government was elected two years ago, it announced an ambitious program of privatization and market reform. The banks and industries returned to private hands provided a bonanza for the market, particularly because the early shares were undervalued and gave ordinary investors the idea there was money to be made.

**Top 5 institutional investors**

**($ billions as of Dec. 31, 1986)**

Source: InterSec Research Corp., London

Consequently, the number of French citizens owning stock has risen to more than 7 million compared with 1.7 million 10 years ago. In addition, the law limits foreign purchases to 20% of shares in any privatized company.

While October's volatility held up for three months the privatization of Compagnies Financieres de Suez, the holding company for Banque Indosuez, the privatization campaign is back on track.

The government, when elected, also decided to break up the monopoly on trading held by a select group of brokers, a move that should foster modernization of the securities industry. Beginning this year, banks were allowed to buy up to 30% of a brokerage. This will rise to 100% in 1990.

By 1992, any financial institution or service firm, foreign or domestic, will be free to trade on the Bourse, subject to ministerial review.

The results already are being seen in a professionalization of the market, with emphasis on research and strategy and a premium on international contacts, said Francois Sureau, a director of Compagnies Reunies Europeannes, Paris.

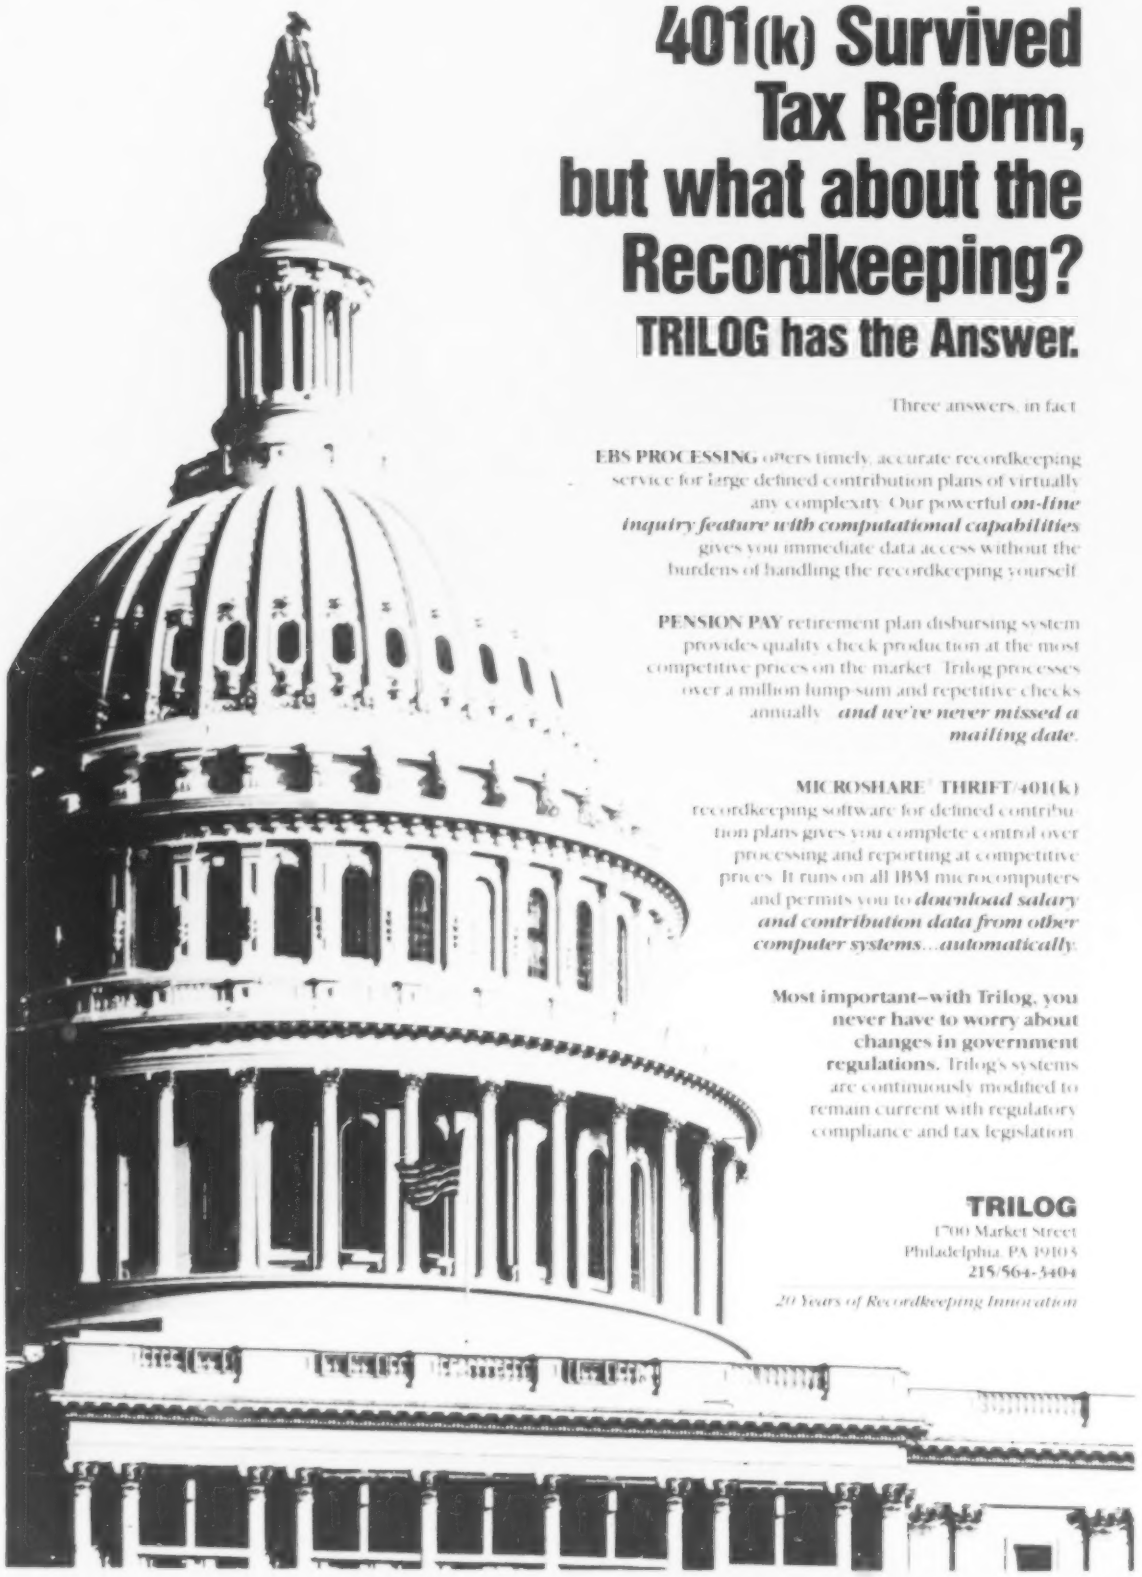
The sophistication is being felt in London, where trading of French shares has dropped to less than 9% of volume from about 15%, said Alain Dufour, partner in the brokerage firm of Dufour-Koller-LaCarriere, Paris.

More and more, with 705 stocks worth $154 billion at year end on exchanges in Paris, Bordeaux, Lille, Lyon, Marseille, Nancy and Nantes, the emphasis is on speed and information. New products are springing up virtually overnight.

International asset management has become a forte of such banks as Banque Paribas, Dumenil-Leble Bank and Banque Indosuez; the futures market started about two years ago; and there is a market developing in venture capital.

Because France has an extensive national pension system, private funds are not yet a big factor in the market. But a year-old law, designed to encourage the development of a private pension system, provides tax incentives to funds and participants.

The most popular type of plan adopted under the new system is the open-end profit-sharing plan, where a company contributes a portion of profits above a certain level. Banks and financial institutions have built busy departments managing the trusts, which are required to invest at least 30% of their assets in French government bonds or French francs. ■



401(k) Survived Tax Reform, but what about the Recordkeeping?

TRILOG has the Answer.

Three answers, in fact

**EBS PROCESSING** offers timely, accurate recordkeeping service for large defined contribution plans of virtually any complexity. Our powerful ***on-line inquiry feature with computational capabilities*** gives you immediate data access without the burdens of handling the recordkeeping yourself.

**PENSION PAY** retirement plan disbursing system provides quality check production at the most competitive prices on the market. Trilog processes over a million lump-sum and repetitive checks annually ... ***and we've never missed a mailing date.***

**MICROSHARE® THRIFT/401(k)** recordkeeping software for defined contribution plans gives you complete control over processing and reporting at competitive prices. It runs on all IBM microcomputers and permits you to ***download salary and contribution data from other computer systems...automatically.***

**Most important—with Trilog, you never have to worry about changes in government regulations.** Trilog's systems are continuously modified to remain current with regulatory compliance and tax legislation.

*20 Years of Recordkeeping Innovation*

# Swiss stay in bonds

By John Parry

GENEVA, Switzerland — Any hopes that Swiss pension funds would turn to stocks from traditional bond investments were dashed Oct. 19.

The $132.5 billion Swiss stock market, which dropped 33.8% in the fourth quarter, had only begun to see significant stock purchases by pension funds, encouraged by a 1985 law allowing them to put up to 30% of their assets in equities.

"Any thought that institutional investors were going to become more adventurous after the advent of the (pension law) was swept out of the window by Black Monday," said Walter Ruegg, president of Swiss Volksbank, Bern. "What we're seeing now is a hunkering down in bonds and real estate — and a scenario where we wait to see what the U.S. market is going to do."

Swiss investors aren't likely to venture into foreign markets either. Peter Widmer, a member of the board of directors of Bank Julius Baer, Zurich, said, "There's going to be a considerable retrenchment, and the exposure in foreign markets, never very strong, is going to shrink even further."

Swiss pension funds have dropped their stock investments by two-thirds, reducing equities to 4% at the end of 1987 from 12% a year earlier. Bonds have increased by a similar proportion, to 39%. Other investments are in real estate, 18%; mortgages, 9%;

# Italians leaving money at home

By John Parry

MILAN, Italy — Before last fall, Italian institutional investors were in many ways hamstrung in their efforts to invest in foreign markets. After last fall, there didn't seem to be much point in doing it anyway.

But Black Monday did not have a pronounced effect on Italian investors' interest in foreign stocks, according to Benito Covolan, head of the securities department at Cassa di Risparmio delle Province Lombarde s.p.a., one of Italy's three largest banks.

"The Italian investor, when he wanted to get into foreign markets, didn't go to his bank or his broker," Mr. Covolan said. "He hopped in his car and went to Chiasso," Switzerland, home to large branches of all the major Swiss banks.

Although the Swiss banks won't say so officially, 90% of their clients are Italians — including institutional investors — who prefer to do foreign securities dealings in Swiss francs.

But institutional investors, by and large, are staying at home and staying conservatively invested in bonds — even though restrictions on transferring money abroad were lifted last year.

Despite their conservative investments, institutional investors are increasingly important to the $109.3 billion Italian stock market. Banks comprise 45% of the market; pension funds, 10%; and mutual funds, 30%, although this is shrinking because of redemptions since Oct. 19. The remainder is individuals.

The Italian government is encouraging the development of the $64 billion pension market, but 70% of the assets are in the conservatively invested Istituto Nazionale della Previdenzia Sociale, the equivalent of U.S. Social Security.

Source: InterSec Research Corp., London

A new employer-sponsored pension system for management employees started Jan. 1. Supplementing the state-run program, the new, supplementary pension system has brought new income to insurance companies, which largely run it so far. But because the plans are so new, there are not yet reliable estimates of their expected growth.

Insurance companies already have put more than 60% of the new assets into bonds, 30% in real estate and only 10% in equities.

"They're wary of getting into the market, and nothing they have seen since October has made them change their minds," Mr. Wagner said.

"Even though the market has turned upwards in the first two months of this year, insurance company investment managers remain very conservative."

While there is a move toward a more open investment policy in Italy as a whole, pension and mutual funds still have to ask permission from the Bank of Italy to invest abroad.

Most don't bother; Mr. Covolan said his research shows the funds, like the insurance companies, are more interested in the bond market. The pension fund at Mr. Covolan's bank has only 1% to 2% in West German bonds — although that might be increased — and most of the other major funds are estimated at having approximately the same proportion in German or other European stocks and bonds. ■

# Swiss

*Continued from page 22*

domestic mutual funds, 8%; and 22% in loans to employees, according to Hans Kaufman, vice president of Bank Julius Baer.

The 1985 pension law permitted funds to invest up to 30% of their assets in stocks, with a ceiling of 10% of total assets in foreign stocks. Bond investments could equal 100%, with up to 30% in foreign issues.

Because many funds decided to take the plunge into stocks only a few months before the market fall, institutional investors will be even more cautious than before, said Felix Zulauf, first vice president of Union Bank of Switzerland, Zurich.

"The only thing I see as bucking this trend is that a few large institutional investors — banks particularly — have gone back into the equity market. . . . But it's not a major trend," he said.

The Swiss funds are becoming a larger force in the market, bolstered by the 1985 law's required participation by salaried employees. That rule will add $10.7 billion to $14.3 billion (15 billion to 20 billion Swiss francs) of new money to the funds each year, according to Mr. Kaufman. (The size of the pension fund market was not available.)

While some funds are turning to the safe haven of bonds, smaller pension funds are boosting their exposure to real estate, said Mr. Zulauf. But he warned that market is shrinking.

"This is a small country and office space in major cities is already at a premium," he said. "Not only that, but interest rates are low; I think we're going to see a switch away from interest in real estate by the funds in the next year." ■

# Japan looking

*Continued from page 17*

As of March 1987, financial institutions owned 41.7% of shares in listed companies, while corporations owned 24.5%. Individual ownership, which has been declining steadily since 1949, stood at 23.9%. The remainder was held by investment trusts, foreigners and other investors.

Government intervention has bolstered beliefs by Japanese institutional investors that the domestic market is the safest place to invest. Besides the Ministry of Finance's easing accounting rules for tokkin funds, it has taken several other actions to prevent the market from sagging. During the crash, it reportedly called on the support of Japan's Big Four securities firms, while the Tokyo Stock Exchange reduced margins for individuals. Since then, the government has allowed the creation of two trust funds to invest in financial services companies, and now might consider postponing the next sale of Nippon Telephone and Telegraph Corp. stock.

Between the intervention and a strong economy, the domestic markets have responded well, and the Nikkei index now is at levels within 5% of last year's peak of 26,646.43.

While domestic markets appear safer, they cannot absorb Japan's burgeoning mountain of cash.

Efforts to export yen have been promoted by the government. Consultant George Curuby, principal of Curuby & Co., Tokyo, said, "In response to the precipitous strengthening of the yen since the fall of 1985, the government has taken an increasingly liberal attitude to easing the (overseas investment) restrictions on the Japanese institutional investors."

"The key point is that the relaxing of the ceilings on investment really comes together with the efforts to promote capital outflows to reduce the yen's appreciation. Most institutional investors can now put large amounts overseas," he said.

Despite October's volatile market, Japanese overseas holdings remain at high levels. Net holdings of foreign stocks as recorded by the Japan Securities Dealers Association were $4.6 billion at the end of 1987, compared with $2.6 billion at the end of 1986. Similarly, foreign bond holdings were $114.9 billion at the end of 1987 compared with $89 billion in 1986.

But efforts to keep assets flowing overseas will have to overcome a renewed conservatism, money managers said.

"During the first nine months of 1987, I think Japanese investors were becoming more tolerant of risk," said Dennis H. Ferro, president of Japan Bankers Trust Co. Ltd., Tokyo. "We had begun to see a shift from U.S. Treasury bonds to the equity market, which is a reflection of an increased ability to take risk at that time." Now, however, Japanese investors are returning to earlier attitudes, he added.

Foreign exchange losses also have battered Japanese investors. Since the fall of 1985, the U.S. dollar has lost half of its value against the yen, causing Japanese to absorb huge losses on their U.S. Treasury bond investments.

Akira Shimizu, executive managing director of Nomura Securities Investment Trust Management Co. Ltd., Tokyo, said: "There are also foreign exchange risks and conflicting views about the development of the U.S. economy. All in all, there's too much uncertainty at the moment."

But despite the problems, there already are signs of reawakening interest in overseas investments, according to Kiyitoshi Aiba, director of investment management, Yamaichi International Capital Management Co., Tokyo. "Investing outside Japan is important to avoid the unnecessary risks entailed in investing only in Japan, especially as the correlations between Japan and other markets are very low." ■

# Home

*Continued from page 17*

become net buyers of Japanese stocks for the first time in 22 months, pumping $3.504 billion into Japanese equities in January and February alone.

"This has coincided with (the level of) the Japanese market reaching within 3% to 4% of its old high," noted Peter Green, president of James Capel Inc., New York.

"The higher Japan goes, the more pressure there is to invest there."

Japanese investors are continuing to buoy the Tokyo stock market and a number of supportive measures by the government will further boost liquidity. Even a small spill of that liquidity abroad in the near term would significantly affect the flow of investment funds worldwide.

Japanese individual investors are snatching up equities in the United States, with a new interest in small-cap stocks, said Shigayo Kawata, vice president of Daiwa Securities America, New York.

Japanese investment in Europe has been quite moderate relative to their wealth and their U.S. investments.

"As we look ahead, I would expect to see that increase as Japan becomes more comfortable with European bond and equities and disenchanted with the currency risk of investing in U.S. dollars," said Gilman C. Gunn, head of international fixed income research, Banque Paribas Capital Markets ■

# Railroads on different tracks

## Union Pacific Realty aims for status as top developer

By Joanne Friedrick

Union Pacific Realty Co., a subsidiary of railroad and energy concern Union Pacific Corp., wants to be one of the top 25 developers in the nation.

To achieve that, the company is expanding into three new areas of the country and will spend more than $850 million on developments within five years, said Edgar J. Gansz Jr., president and chief operating officer.

Mr. Gansz, who is based in the company's Omaha, Neb., office, said Union Pacific Realty annually will develop 3½ million square feet of primarily speculative office and industrial space in its target areas.

Suburban Chicago and Morris County, N.J., offices were added in 1987, a Washington, D.C., operation is scheduled to begin in the second half of 1988 and Dallas, Atlanta and Boston operations are on the drawing board.

Meanwhile, development in Los Angeles/Ontario, Calif.; San Francisco/Oakland; and Seattle will continue, but further activity in Denver and Houston is on hold.

Marilee Tatalias, director-real estate operations in the Oak Brook, Ill., office, said in building its new portfolio, the company is looking to achieve returns "that are more akin to entrepreneurial developers — low double digits."

Mr. Gansz said leveraged, after-tax, internal rates of return for low-risk properties (e.g. build-to-suit office) would be 13%; for high-risk buildings (e.g. industrial, high-tech speculative suburban), 19%.

Observers attribute Union Pacific Realty's pro-growth attitude to the hiring of New York-based Chairman Arch Jacobson, former Prudential Realty president, in 1986 and to the subsequent reorganization of management in 1987, which put Mr. Gansz, also an alumnus of Prudential Realty, in the president's spot.

Mr. Gansz said the search for Mr. Jacobson was a demonstration of Union Pacific's commitment to real estate. "One of the reasons we're in this business is that we realized real estate over the long term can be profitable. Union Pacific is a growth company. Our real estate undertakings will contribute to our corporation's growth."

The parent company's board "has made a significant commitment; it was not made lightly," he said.

The board's attitude is a significant departure; in the past, board members "were doubting Thomases who weren't secure enough to take risks," said Bob Dunn, former president of Missouri Improvement Co., the real estate subsidiary of Missouri Pacific Railroad that merged with Union Pacific in 1982.

Union Pacific Realty "is now structured so real estate doesn't take a back seat," he said.

"The railroad was getting more than the lion's share of the capital" when real estate was handled through Upland Industries by former railroad management, noted Mr. Dunn, now a broker with James T. Barry Co., Milwaukee.

Photo by Mary Hertehy

Marilee Tatalias of Union Pacific Realty's Chicago office inspects the site of the former Aurora Downs racetrack and future office-research and industrial parks.

Robert Kevin Brown, vice president-corporate services at Carter & Associates, Atlanta, and a 30-year veteran in corporate real estate, called Union Pacific Realty's recent hirings and new approach — adding markets outside its historic development areas — "the best possible way to go about it."

Mr. Gansz emphasized the realty company "will be a self-funding mechanism." In addition to implementing an existing

*Continued on page P23*

Mission Bay, a 300-acre project in San Francisco, will be retained by Santa Fe Pacific Realty Corp. even though the realty firm must sell $800 million to $1 billion worth of holdings to help finance a restructuring of the parent company.

## With takeover looming, Santa Fe sells, builds

By Joanne Friedrick

Santa Fe Pacific Realty Corp. is traveling parallel tracks while at least two suitors are fighting over control of its parent.

Executives of the San Francisco-based real estate subsidiary of Santa Fe Southern Pacific Corp., Chicago, are juggling a mandate to sell $800 million to $1 billion worth of holdings by year end to help finance a $4.695 billion restructuring with an ongoing development program that makes its parent such an attractive takeover target.

To help pay off the loan for a $25-per-share cash payment to shareholders and a planned $5-per-share subordinated debenture that make up the restructuring, Santa Fe Pacific Realty will sell 3.6 million square feet of its 8 million square feet in developed and fully leased buildings this year, with the goal of having all the buildings sold by 1992.

These developments include light industrial, distribution and warehouse buildings, low-rise offices, research and development facilities and retail centers, primarily in Southwest and West Coast states.

Although the figures are subject to change, Santa Fe ultimately is expected to sell 123 acres of its 500 acres in major projects; 6,650 acres of surplus land; all of its 150,000 acres of land grant agricultural holdings in the San Joaquin (Calif.) Valley; 500,000 square feet of miscellaneous property; and 4,900 acres of developable land.

Some sales, including that of agricultural land, had been under way before the restructuring.

Joseph O'Connor, president, Copley

# Trends show soft market will stay awhile

By William Fulton

Even though demographic and economic trends suggest the current soft office market will be more serious than merely a cyclical downturn, America's real estate developers don't seem to be paying much attention.

Among the warning signs:

- The flood of young people into the labor force virtually has stopped, sending job growth toward a 50-year low.
- More people are working at home, though no one knows for sure how many.
- On Wall Street and elsewhere, brokerage and investment houses are laying off white-collar workers, while the office work place is just now increasing worker productivity the way factories did much earlier.
- And David Birch, a professor at the Massachusetts Institute of Technology, Cambridge, Mass., predicts the United States will require only half as much office space in the decade ending in 1995 as was built in the decade ended in 1985.

**Excess office construction by region: 1975-85**

| Region | Need (mil. sq. ft.) | Excess (mil. sq. ft.) | %* |
|---|---|---|---|
| Mountain | 64.4 | 38.3 | 43.5 |
| W.S. Central | 130.6 | 73.3 | 37.4 |
| Pacific | 204.2 | 103.3 | 32.4 |
| E.S. Central | 25.4 | 21.3 | 20.1 |
| United States | 893.5 | 452.4 | 19 |
| S. Atlantic | 164.8 | 66.1 | 18.6 |
| E.N. Central | 68.1 | 64.9 | 14.2 |
| W.N. Central | 43.2 | 23.1 | 14 |
| New England | 70 | 14.1 | 8.9 |
| Middle Atlantic | 125.6 | 47.5 | 8.8 |

* Excess construction as a percentage of total 1975 office supply
Source: America's Office Needs: 1985-95, by David Birch, Arthur Andersen & Co., Chicago

Despite the warning signs, the value of building permits issued in the United States in 1987 declined less than 10% from 1986, and was greater than in any year prior to 1984, according to San Francisco real estate consultant Stephen E. Roulac.

As George Sternlieb, director of Rutgers University's Center for Urban Policy Research in New Brunswick, N.J., puts it: "There are probably not enough bottoms to fill all the desks in all the office buildings projected to be built in America."

The likely result of continued development in light of a fundamental shift in work habits will be a "crisis glut" in the early 1990s, with vacancy rates running 25% to 40% in some cities, large amounts of fairly new space being dumped onto the sublease market at bargain-basement prices, and — finally — a precipitous drop in office construction.

Because the recent boom in office development has attracted many new firms to the field, the number of casualties could be much higher than it was during recessions in the 1970s and early '80s.

The tremendous growth in office demand during the past few years has come about partly because of the increase in the labor force and partly because of the well-publicized conversion to a service economy. But now the Baby Bust is driving down labor-force growth, and real estate experts say the economic conversion is largely over, with office layoffs likely to continue for some time.

Labor-force growth in the '70s was remarkably high, running at almost 3% per year. Close to 3 million people — mostly Baby Boomers and women — entered the job market each year.

By the early 1990s, however, labor growth will be half what it was in the '70s, due in part to the low birth rate since 1965 and slower growth of women in the labor force, the Bureau of Labor Statistics predicts. Already, younger women are in the labor force in comparable numbers to men and, by the year 2000, the "working woman" phenomenon will have topped out completely.

These demographic trends have profound implications for office employment, which, in turn, dictates the demand for office space.

The Birch report, issued jointly by the MIT Center for Real Estate Development and Arthur Andersen & Co., was based mostly on estimates of job growth over the next 10 years. It contained some truly frightening numbers for office developers:

- Washington and New York will be virtually the only U.S. cities requiring as much office space in the next decade as they constructed in the previous decade.
- Only a few other major markets — Detroit, Baltimore, Philadelphia and Atlanta — will require even half as much space, while most Southwestern and Pa-

*Continued on page P23*

# Union Pacific

*Continued from page P3*

cash balance to finance acquisitions, plans are to sell "portions of the portfolio" to provide additional cash to continue development undertakings.

Estimates are the turnover could involve half of the new and existing properties — it already holds about 75 business and industrial parks in 22 states — with profits going to new development and to fatten the parent company's coffers.

Mr. Gansz said the asset management group also will add capital by selling off about 10,000 acres of raw land, mostly in markets the company is leaving — Salt Lake City, Cheyenne, Wyo., St. Louis and Kansas City, Mo.

Although $70 million to $80 million of land will be sold, up to $60 million will be spent on acquiring new land.

"We own our lands . . . We buy lands with our cash. What we plan to do is approach lenders and money sources primarily for construction and permanent financing. We'll continue to own our land. We don't plan to leverage land," Mr. Gansz said.

Union Pacific Realty undertakes joint ventures more as an exception. "Our strength is as developers," he noted.

"We would rather control 100% of the real estate, take 100% of the risk, and get 100% of the profit," Ms. Tatalias added.

Still, Union Pacific Realty will consider a joint venture if that's the only way it can get the land it wants, such as in parts of the Northeast, where there is a severe shortage of industrial land.

"We wouldn't be a passive investor," but the developing partner, said Tom Giannone, director-real estate operations.

Mr. Giannone, who joined Union Pacific Realty from Prudential Realty in July, acknowledged "there isn't much land for any real estate projects in New Jersey. We're looking at some pretty difficult sites now, sites that will take years to develop."

And he is looking at all projects warily. "I can't afford to have the first project get stuck in a down market," he noted. "But I think the market is still strong in several areas."

His five-person operation in Short Hills, N.J., is looking at developing in such places as Connecticut, upstate New York and northern New Jersey, as well as the highly developed Morris County area.

By the end of 1988, he said, he plans to have two projects under construction and another two office and industrial projects going through the approval process.

The first under contract is the 100-acre Triumph property in Florham Park and East Hanover, N.J., which will be developed into offices.

"We target projects in Chicago that have the best opportunity," she said. Markets might be softer and demographics weaker than they once were, Ms. Tatalias said, but developers "that have the assets to compete will do well."

She cited the Naperville project, saying that area "has good absorption numbers." When the office building comes on line in 1989, she said, there will be a "great window."

She also sees no problem with finding projects to meet Union Pacific Realty's goal of about $200 million in new developments around Chicago in the next five years. She has concentrated her search in the counties outside Chicago and is just now "tiptoeing into Cook County," in which Chicago is located.

> "We own our lands . . . We buy lands with our cash. . . . We'll continue to own our land. We don't plan to leverage land."
>
> Edgar Gansz
> Union Pacific Realty

From her suburban Chicago office, Ms. Tatalias and a staff of five are handling three major development projects while continuing to search for additional opportunities.

In January, Union Pacific Realty purchased 94 acres in South Barrington, Ill., from Beatrice Co. for an office campus. It already had contracts to buy acreage in the Naperville (Ill.) Office Park for a 135,000-square-foot office building and for the former Aurora Downs racetrack in North Aurora, Ill., which will be used for a 27-acre office-research park and a 70-acre industrial park.

Unlike Union Pacific Realty projects in California, which are primarily distribution facilities, Ms. Tatalias said Chicago-area ones will be light manufacturing and light industrial, with some back-office facilities.

Mr. Gansz said a search is going on now for a senior person to head the Washington office. Operating that office is contingent on having the capital, the staff and a sufficient market for a five- to seven-year development period.

Despite the move into new markets, 75% of this year's projects will be on land already owned. "A significant contributor will be in California," Mr. Gansz said, where 1.4 million square feet will go up in the Ontario area.

Union Pacific Realty also recently spent $60 million on 275 developable acres in Carlsbad, Calif., that was held by Carlsbad Research Center Associates, a partnership of Urban Diversified Properties (a division of Aetna Life & Casualty Co.) and the Koll Co., Newport Beach, Calif.

# Trends show

*Continued from page P3*

cific cities will require only a fraction of the space they constructed in the last decade.

In fact, Mr. Birch predicts an enormous drop in demand for "primary" office space (that is, space in office buildings, not in buildings used primarily for some other purpose) in California. Although California led the nation with 265 million square feet of primary office space constructed between 1975 and 1985, Mr. Birch forecasts the state will need only 71 million square feet over the next decade.

"Past gluts have been absorbed fairly quickly by a continued and rapid expansion of the economy," Mr. Birch said. "This one won't be."

If demographic changes were all that America's office developers and investors had to worry about, the situation would be bad enough. Making it worse, however, is the economic restructuring beginning to roll through the white-collar economy.

When economic restructuring hit manufacturing in the early '80s, the office market benefited because a big shift from industrial to office jobs resulted. Now things are different.

"The shift is behind us," said Christopher B. Leinberger, managing partner of Robert Charles Lesser & Co., a real estate consulting firm in Los Angeles.

Statistics compiled by the real estate research department at Salomon Brothers Inc., New York, show white-collar employment growth reached its peak in 1984, with a 7.6% annual rate. By 1987, it had dropped by half, to about 5%, and Salomon's David Shulman is predicting a further 30% drop in the growth rate in 1988.

Beyond a slowing of the economic conversion to office work, however, is the corporate reorganization now sweeping the financial, insurance, and banking industries. "The cost-control ethic is shifting to the white-collar world," Mr. Shulman said.

Though good forecasts are hard to come by, most real estate experts agree offices have lagged far behind factories in improving worker productivity. But as they catch up over the next few years, demand for office space will be severely dampened.

"Part of the reason for corporate reorganization is that there's plenty of room to cut," said Rutgers' Mr. Sternleib.

As the cost-control ethic spreads, it could cut into office demand other ways. With vacancy rates high and rents low, many office businesses have expanded the amount of square footage each worker uses. "A 10% reduction in the amount of space per worker, and you'd have a very ghastly glut of office space," Mr. Sternleib warned.

And because of layoffs and per-worker reductions, a large amount of excess space in offices constructed in the 1980s is likely to hit the sublease market in the early 1990s, driving rents down further.

At the same time, employers are finding cheaper ways to provide space for office workers. Already, some suburban industrial parks are fighting with office buildings for tenants.

"What used to be warehouse or distribution space may start housing office workers at a very low cost," said Larry Wofford, director of research at Office Research Systems, a real estate marketing analysis firm in Tulsa, Okla.

The other possible alternative to the office, of course, is the home. Edgar O. Cheney Jr., a building analyst with United Technologies Corp., Hartford, Conn., has calculated that if 10% (or about 6 million) of America's white-collar work force worked at home, office demand would drop by 1 billion square feet.

Still, Americans have not yet shown a strong inclination to be full-time home workers. The Bureau of Labor Statistics estimates that in 1985, only about 2.2 million people (less than 2% of the labor force) worked at home full time, only half of whom were employed by an outside company.

"The potential to work at home gets overstated," said Bureau economist Frank Horvath. "For many occupations, you spend a good part of your day in meetings, or you're a part of a production team." Yet real estate analysts agree a home office is far less expensive than any other alternative — even if it means buying a bigger house.

It's possible, though perhaps unlikely, some employers will start subsidizing employees who want to operate from home. More likely is a further "decentralization" of the economy into smaller companies; more workers will be their own bosses and could choose to work at home.

But if certain other trends emerge, office demand projections based on demographic changes could be off by a wide margin.

For example, as workers become more scarce, employers probably will turn to people they now deem more marginal. According to Nation's Business, by 2000, 80% of all entrants into the work force will be women, members of minority groups or immigrants, groups whose labor force participation currently is low.

"No longer can you create a ratio that says, 'Because demographic trends say X, demand for office space is going to be Y,'" said Sanford Goodkin, director of real estate for the Peat Marwick/Goodkin Consulting Group, San Diego.

In particular, Mr. Goodkin believes foreign employers, such as the Japanese, might feel less bound by American prejudices in their search for workers.

Nevertheless, the hiring of marginal workers is not likely to offset the space-saving efforts of corporate reorganizers and other trends that will drive down demand for office space in the next decade.

And sooner or later, developers — or, more likely, their lenders — will catch on. So far, office developers have adapted to a world with higher vacancy rates, mostly because office buildings are still valuable as saleable assets.

"Pro formas have changed," said Mr. Leinberger of Robert Charles Lesser. Developers now assume a longer absorption time and set aside more interest reserve to make up the difference, he said.

"The reason they do that is back-end payoff," Mr. Leinberger added. "Offices continue to be investment darlings."

But this attitude isn't likely to last forever.

"A number of our clients are institutional lenders, and I know they're closing their pocketbooks," said Raymond Torto, a principal with Coldwell Banker/Torto Wheaton Services in Cambridge, Mass.

"Ultimately, the space market will determine the value of real estate."

And given the crisis glut that's likely to hit, the market-based value isn't likely to rise very much. ■

# Plan enrollment low

## Public workers slow to accept 401(k) equivalent

By Fred Williams

While a substantial majority of state and local government employers offer the public sector equivalent of a 401(k) salary reduction plan, only a small minority of eligible employees are participating.

According to a recent survey by Buck Consultants Inc., New York, only 16% of eligible employees are enrolled in section 457 plans compared with 79% participation by salaried employees and 59% by non-union hourly employees in 401(k) plans.

"Our survey demonstrates that 457 plans are still in their infancy with respect to employee participation," said Joseph G. Metz, director of governmental legal services for Buck. Mr. Metz said one reason for the low participation levels is that employers are not allowed to make matching contributions.

Section 457 plans permit state and local government employees to shelter from current federal income tax the lesser of 25% of income or $7,500.

Of the 98 public employers surveyed by Buck, 69 offer section 457 plans.

Several public-sector benefit plan executives blame the lack of interest on difficulties in communicating to employees, the diversity of public employers (varying public agencies) associated with a particular plan and the lack or overabundance of investment options.

In Ohio, about 25% of eligible employees are participants in the $650 million plan, according to Ray McLaughlin, executive director of the Ohio Public Employees Compensation Board. Its relatively high participation rate is due to a strong promotional effort by the state, he said.

"I came here from the Arkansas program. There, there was no aggressive marketing or promotion of the plan. It's treated as a fringe benefit and employees almost had to ask for it before it was offered."

"In Ohio, the board chose to expand the program to all employers in the state — now about 500 different political subdivisions, and to promote it aggressively."

Ohio's investment options are a universal life program, a fixed annuity, a variable annuity and six mutual funds ranging from equity growth to income-oriented bonds. The state is seeking additional investment options.

In Texas, the participation rate among eligible employees is only about 7%, said Deborah Powers, plan administrator. Part of the reason might be the $115 million Texas plan offers participants a phenomenal number of managers and investments. Participation is restricted to state employees.

"We are the only plan in the nation that has 140 investment managers to choose from," said Ms. Powers. And with some of the eligible financial institutions offering 10 to 12 investment options, the employee might be overwhelmed, she said.

The number of financial institutions exploded following a 1975 opinion from the Texas attorney general saying the plan could not exclude institutions authorized to do business in Texas and who applied to participate in the program.

Colorado has about 10% participation in its 457 plan, according to Helen Erickson, administrative officer. Colorado's plan also is not available to municipal employees.

Colorado offers participants a savings option at a local savings and loan, Treasury bill and short-term money market options, an annuity program and six mutual funds. A recent survey indicated participants want additional investment options in the equity and fixed-income areas, Ms. Erickson said.

"One reason employees aren't participating fully is that they don't know about the program," she said. "Those that do know seem to really appreciate it."

She said Colorado now contacts each new state employee and provides information about the plan, which has about $50 million in assets.

The $146.6 million Illinois state plan has about a 15% participation rate, said Patrick Foley, spokesman for the Illinois Department of Central Management Services, Springfield.

The Illinois program offers participants six mutual funds. Mr. Foley said a lack of matching contributions from the state probably is the reason for the low participation.

Buck's Mr. Metz said participation levels in 457 plans should begin to increase soon.

"As more funds are established and deposits grow . . . participation will increase. I see a continued refinement of investment strategy and a parallel to the private sector, where 401(k) plans generally supplement and complement defined benefit plans." ■

NATIONAL PATIONS

BellSouth's telephone operating companies, Southern Bell and South Central Bell, continue their remarkable growth, offering new products and services to an expanding customer base of over 15 million homes and businesses.

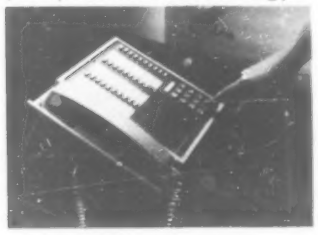
At the same time, BellSouth is committed to growth through developing new businesses that are a natural outgrowth of BellSouth's Bell heritage.

On January 1, 1986, BellSouth Enterprises was formed. Its purpose: To direct all BellSouth subsidiaries in businesses other than regulated services provided by Southern Bell and South Central Bell.

Today BellSouth Enterprises consists of three groups comprising a rapidly growing number of companies and joint ventures operating throughout the U.S. and around the world.

**An Industry Leader In Directory Advertising And Publishing**

The companies of the BellSouth Advertising and Publishing Group include the leading publisher of traditional and specialized directories. In addition, these vertically integrated companies also offer expertise in advertising sales, computer-based pre-press production and photocomposition, graphics, printing and binding, and are on the leading edge of four-color print production technology.



**Helping Companies To Manage Information**

The BellSouth Communications Systems Group markets the products and services that keep BellSouth in the forefront of the telecommunications industry. Throughout the U.S. and Europe, the Group offers a range of products from office automation equipment to computer leasing and maintenance.

**Focusing On The Booming Cellular Market**

The companies of the BellSouth Mobile Systems/International Group focus primarily on the rapidly growing mobile telephone market. Already in many major American cities, BellSouth companies and joint ventures are quickly penetrating cellular phone markets in England, Western Europe and Australia.

In the years to come, BellSouth Enterprises will continue to play an important role in BellSouth's commitment to provide and maintain high-quality Bell℠ goods and services, to emphasize telecommunications and to pursue orderly corporate growth. With such a strategy, it's no wonder the future looks so exciting for BellSouth.

# InvestmentAge

The newspaper of corporate and institutional investing $4.50 an issue - $90 a year

Institutional investors are expected to play a key role in the heated proxy battle between Gillette and The Coniston Group.

# Gillette fight to center on institutions

By Marcia Parker

BOSTON — Institutional investors will determine the outcome of the battle between Gillette Co. management and The Coniston Group for control of the company.

The battle is reaching fever pitch as the two sides vie for the votes of pivotal institutional investors, who own 40% to 50% of the shares, at the company's April 21 annual meeting.

The Gillette/Coniston duel is being hailed as the proxy contest of the season. It has all the markings of a classic proxy struggle involving a household-name company and a lesser-known raider.

At the same time, Boston-based Gillette's stock has been climbing recently because the company has been the target of recurring takeover rumors. The stock closed March 30 at 44 per share. Philip Morris Cos. Inc., New York, is considered a potential suitor, but signs of a bidding war have yet to surface.

# Small stocks bounce back

By Joel Chernoff

After 4½ years of severe underperformance, small- and medium-capitalization stocks finally might be rebounding.

Whether the beginning of a long-term turnaround or just a blip, first-quarter returns of small-cap issues nearly tripled those of larger-cap stocks: 13.37% for the Nasdaq industrial index of over-the-counter stocks vs. 4.78% for the Standard & Poor's 500 index.

Some believe a reversal has started, but still have their fingers crossed.

"We think it has (turned around), but of course we thought so in the first quarter of '87," said Robert Zuccaro, president of Stamford, Conn.-based Target Investors Inc., which manages $200 million in small-stock portfolios for pension funds.

While many pension fund executives are studying the issue, only a few are adopting a small-cap bias for their stock portfolios.

"My personal view is that the S&P is not the right portfolio to own at this time," said Robert Shultz, vice president-pension asset management at RJR Nabisco Inc., Atlanta, who oversees the $2.4 billion pension fund.

Mr. Shultz said the average capitalization weighting of the equity portfolio is slightly lower than that of the Russell 3000 index.

Some managers already have altered their portfolios. Jeffrey Diermeier, managing director of First Chicago Investment Advisors, Chicago, said the firm overweighted the small-stock portion of its $2 billion in domestic equity assets starting late last year. Since small stocks started rebounding in December, small companies have corrected 20% to 25% of the underpricing that had occurred since mid-1983, he said.

Many investment experts believe a turnaround in small-cap performance is long overdue. They point to such reasons as the undervaluing of small-cap stocks and overvaluing of larger-cap issues; the cyclical nature historically of small-cap performance; the return of merger activity to the small-cap area; and the demise of technical factors that had buoyed S&P stocks.

Since mid-1983, small-cap issues have greatly underperformed S&P issues. The Russell 2000 index — which includes stocks with capitalizations between $25 million and $300 million — produced a meager compound annual rate of return of 1.4% between July 1, 1983 and Dec. 31, 1987.

By comparison, the larger-cap Russell 1000 index and the S&P 500 returned 12.2% and 13.1%, respectively, during that period.

In the long run, however, small-cap stocks have topped large issues by two percentage points a year from 1926 to 1986, returning 12% against 10% for the S&P 500, according to research by Dimensional Fund Advisors Inc., Santa Monica, Calif.

Since their relative valuation peak in mid-1983, small- and medium-cap stocks have been hurt by a variety of influences, including the rise of indexed stocks, which mostly focus on the S&P 500, and the increase in foreign purchasers, who favor household names that tend to be large-cap stocks.

An analysis by Dennis J. Tritten, a vice president at Frank Russell Co., Tacoma, Wash., showed other reasons for smaller stocks' weaker performance: failure to meet high growth expectations; elimination of lower capital gains tax rates; a recession in the technology sector during 1985 and 1986; and a shift by

# Funds buy out firm

## Delaware Management price 3 times revenue

By Joel Chernoff

Some tax-exempt institutional investors will own a piece of Delaware Management Co., the first money management firm to be the target of a leveraged buy-out.

Delaware Management, Philadelphia, is being purchased for about $300 million by the firm's management and Legend Capital L.P., a New York leveraged buy-out fund in which several institutions are limited partners.

Limited partners include the United Technologies Corp. pension fund, Hartford, Conn.; the Massachusetts Institute of Technology retirement fund, Cambridge; and the Brown University endowment fund, Providence, R.I. Other investors include Chemical Bank, New York; Manufacturers Hanover Trust Co., New York; Prudential Insurance Co., Newark, N.J.; Security Pacific National Bank, Los Angeles; Toronto Dominion Bank, Toronto; Primerica Inc., Greenwich, Conn.; and Irving Trust Co., New York.

The highly leveraged purchase of Delaware Management, which manages $13 billion in institutional assets and $5 billion in mutual fund assets, is pending approval by the boards and shareholders of the company's 16 mutual funds.

The price tag for Delaware Management shows there is significant interest in buying high-quality firms despite last year's stock market crash and weaker prospects for growth in the pension market.

Price multiples paid for money managers declined to 1.7 times revenue at year-end 1987 from a peak of 5.4 around March 1987 (*Pensions & Investment Age*, March 7).

## LATE NEWS

### JMB buying Celanese building

NEW YORK — JMB Institutional Realty Corp., Chicago, has an agreement with the Royal Dutch Shell Pension Fund Foundation, The Hague, Netherlands, to acquire the 1.7 million-square-foot Celanese building in midtown New York for approximately $340 million.

JMB's commingled funds Group Trust IV and Endowment and Foundation Limited III will finance about 51% of the purchase; separate account clients are to finance the remainder. At press time, it was not known what separate account clients had committed to the deal.

### 3rd partner leaves Brignoli firm

NEW YORK — Duane Roberts, partner, has left Brignoli, Curley & Roberts Associates, effective last week.

He is the third partner to leave; Jac Curley left the firm in December and James Karanfilian, in January. Their departures were due to "philosophical differences" with Richard Brignoli, the other partner and majority owner, on the operation of the firm, Mr. Roberts said. Their plans are undecided, he said.

Brignoli Models Inc., of which Mr. Brignoli is president, has a controlling interest in Brignoli, Curley & Roberts. Brignoli Advisers Inc., a subsidiary of Brignoli Models, will take over marketing and client servicing for Brignoli, Curley & Roberts, said William M. Morris, partner in Brignoli Models and president of Brignoli Advisers.

Both Brignoli, Curley & Roberts and Brignoli Advisers market quantitative equity strategies developed by Brignoli Models. Brignoli, Curley & Roberts runs $800 million in tax-exempt assets. Brignoli Advisers manages $200 million in corporate cash in a stock index arbitrage strategy. All the firms are in New York.

### Executive joins Rogers, Casey

STAMFORD, Conn. — Paul H. Fullum, formerly head of direct investment for Progressive Corp., Cleveland, will become managing director-investment supervision at Rogers, Casey & Barksdale Inc., effective Tuesday.

Mr. Fullum could not be reached for comment by press time.

### Asset manager changes reported

• Two corporate pension funds have made their first commitments to overseas investments, while a third fund hired its first active international manager.

The $246 million pension fund of Burroughs Wellcome Co., Research Triangle Park, N.C., allocated $24 million to a separately managed, non-domestic equities account with Bankers Trust — Investment Management Group, New York, said Glenn Andrews, assistant vice president-finance.

In addition, Burroughs Wellcome moved $28.5 million to the RESA commingled open-end real estate fund managed by The Phoenix, Hartford, Conn., the fund's first real estate investment.

The $200 million pension fund at Pittston Corp., Greenwich, Conn., made its first international allocation, hiring Oechsle International Advisors, Boston, to manage an undisclosed amount, according to a company spokesman.

Funding for the manager will come from cash. SEI Funds Evaluation Services, Wayne, Pa., served as consultant.

Meanwhile, Schering-Plough Corp., Madison, N.J., hired Scudder, Stevens & Clark, New York, to manage $20 million as the $367 million fund's first active international equity manager, according to Candice Cox, director-trust investments.

Schering-Plough has invested in an international index fund managed by Chase Investors Management Corp., New York, for five years. The latest hire brings international investment to 11% of the fund's total assets.

Assets came from cash and reducing existing accounts, primarily equities. The search was conducted internally.

• WASHINGTON — The $1.1 billion District of Columbia Retirement Board has hired two minority-owned investment management firms to run $10 million each, according to Adrian Anderson, acting executive director for the fund.

NCM Capital Management Group Inc., Durham, N.C., will manage a fixed-income account, while Greaves/INVESCO, Atlanta, will run an equity portfolio. Both have been hired as part of an effort to establish a farm team of minority firms, and each could be given more funds to manage in the future, Mr. Anderson said.

• CHICAGO — The Quaker Oats Co. has hired three value managers to invest a portion of its $375 million pension fund.

Barrow, Hanley, Mewhinney & Strauss Inc., Dallas; Lehman Management Co., New York; and Miller, Anderson and Sherrerd, Bala Cynwyd, Pa., will manage equal amounts, according to Susanne Abosch, a financial analyst at Quaker. Ms. Abosch would not say how much each manager would receive.

The assets came from a manager termination made more than a year ago, she said.

Institutional Capital Corp., Chicago, and Sanford C. Bernstein & Co., New York, also manage equities for Quaker Oats.

# Execs leave old posts for new ventures

## 4 choose different avenues

Several executives of large corporate pension funds recently have announced job changes.

• William H.S. Preece Jr. has resigned as director-corporate finance at Kraft Inc., Glenview, Ill., effective the end of this month. His plans are undecided.

• Judith W. Mares, who for most of the 1980s oversaw the pension investments at General Mills Inc., Minneapolis, and more recently was its assistant treasurer-international finance, has left the food products concern to become managing director of the investment group of Norwest Capital Resources, the institutional trust division of Norwest Bank, Minneapolis.

• Jack Miller has left his position as director of investments at Eli Lilly & Co., Indianapolis, to direct the investment of the pension plans of Philip Morris Cos. Inc., New York, and its subsidiary, General Foods, White Plains, N.Y. Although the assets probably will not be merged, they will for the first time be overseen at the parent company level by one person.

• R. Barry Thomas, assistant treasurer of Union Pacific Corp., New York, will become a consultant with Rogers, Casey & Barksdale Inc., Stamford, Conn., effective April 11.

Mr. Preece said he wants to return to specialization in pension investing, either with a plan sponsor or money management firm, and suspects he will wind up at the latter.

At Kraft, he had become more of a generalist in corporate financial matters, although he continued to oversee the company's $1.7 billion in employee benefit assets, he said. His successor has not been named yet.

With the company since 1981, one of the highlights of his tenure was the split of Dart & Kraft Inc. into Kraft and Premark International Inc. in 1986. "We put a very big fund together and pulled part of it apart," he said.

Ms. Mares is filling a new position at Norwest, according to Stan K. Medina, vice president and executive director. She will report to him.

She will oversee $2 billion of discretionary institutional investments and manage 12 professionals, composed of eight portfolio managers and four product managers, he said.

General Mills hasn't decided whether to replace Ms. Mares, ac-

# Active equities sizzle

## $537.5 million in new business reported

By Trudy Ring

Active equity management outdrew indexing in the first quarter of 1988, while real estate and international bonds were popular alternative investments.

Of manager hirings reported in *Pensions & Investment Age* during the quarter, active equity management attracted $537.5 million. For domestic-stock indexing, only one $45 million account and two accounts of undisclosed size were reported.

These and other figures are based solely on reports published in *P&I Age* during the quarter; there might have been other were not publicized.

Real estate equity drew $329.4 million, while a hybrid venture capital-leveraged buy-out fund that will focus on real estate products attracted $185 million.

In international and global investing, bonds attracted $150 million, plus two accounts described as less than $100 million each. A total of $46 million went to actively managed international equities and $58 million to international stock-index funds. There also was $52.5 million channeled to international/global balanced management.

Annuities accounted for $180 million, all in a move by Mellon Bank, Pittsburgh, to cover some of its pension liabilities. Mellon bought the annuities from Equitable Life Assurance Society of the United States, New York.

Other asset classes that reported drawing money in the quarter were venture capital,

PORTFOLIO MANAGEMENT

# Model signals shift in style

By Barry B. Burr

Energen Corp. and Puritan Bennett Corp. plan to boost the equity exposure of their pension funds in June, tilting toward a growth style.

The signal for the change comes in part from a tactical equity tilting model that is based on the relative performance of investment managers grouped by style.

Sponsors and consultants typically use style performances as benchmark measures to evaluate the results of their own managers with their peers. But Energen and Puritan Bennett, led by their consultant, Spectrum Advisory Corp., Chicago, go beyond that. They use the data to make equity allocation decisions.

Spectrum developed the two-step model, which determines a fund's equity exposure and how that exposure should be tilted between two equity styles, value and growth.

Because the two steps in the model are independent of each other, Spectrum could make shifts between equity styles without changing the overall equity exposure, or vice versa, although changes also could be made in tandem. Depending on the signals, the model might recommend shifts every quarter.

For the equity style tilting, Spectrum tracks the relative performance of 1,500 equity managers, broadly grouping them into either style. The more one style outperforms the other, the more assets the Spectrum model recommends be shifted to the style out of favor.

Robert Moseson, president and chief executive officer of Spectrum and its sibling company Performance Analytics Inc., claims both tactical shifts — the equity exposure and the equity style mix — add a total of 700 to 800 basis points a year over a static allocation.

Last year, for example, its clients' total returns for their pension funds averaged 10.3% (ranging from 9.4% to 14.3%). By comparison, 3.7% was the median return of several hundred other pension fund clients Performance Analytics tracks. These clients do not use the Spectrum allocation model. In contrast, the median pension fund in SEI Corp.'s universe returned 3.9% last year.

He attributed 200 basis points of the total added to the style tilt and the remainder to the equity exposure.

"You have to have good growth and value managers," he said. "Once you do that, the rest of the process is easy."

Performance Analytics provides performance comparison services. Spectrum makes the equity shift recommendations but does not manage money, although it is a registered investment adviser, Mr. Moseson said.

According Mr. Moseson, the allocation is based on the expectation that each equity style typically moves through cycles of under- and overperformance relative to each other. The Spectrum model attempts to capture most of the superior performance, while reducing the commitment before the style underperforms.

The style performances tell only where to place the equity bets; not how much money to place in equities overall.

For the overall equity exposure signal, Spectrum uses the market price-to-book value of the Standard & Poor's 400 stock index, in conjunction with the trends in performance by style.

Mr. Moseson said Spectrum advises the tactical shifts for 12 pension funds and one profit-sharing fund, ranging in size from $20 million to $700 million. In all, he said the clients have some $2 billion in assets following the allocation strategy. He disclosed the names of only two clients, the $60 million pension fund of Energen, Birmingham, Ala., and the $30 million pension fund of Puritan Bennett, Overland Park, Kan.

"Overall, we were happy" with the performance last year, said Walter E. McMahon, Energen's director-treasury operations.

"We have not gone back to see how we would have fared without Performance Analytics. But we certainly have done better than we would have under our old method."

At Puritan Bennett, Lee Robbins, chief financial officer, added, "At this point we're very pleased with their performance."

Until Energen hired Spectrum and Performance Analytics in December 1986, Mr. McMahon said the fund was kept for years in a static mix of bonds, equities and cash, all run by Equity Capital Management Corp., a unit of Equitable Life Assurance Society of the United States, New York.

In December 1986, Energen stripped Equitable of its equity assignment and hired Newbold's Asset Management, Philadelphia, and Stein Roe & Farnham Inc., Chicago.

Initially, Energen, following the advice of Spectrum, allocated

FEATURE

# 1987 earnings weak

**David L. White is executive vice president of Invista Capital Management Inc., Des Moines, Iowa**

By David L. White

An issue that has been troubling me recently is corporate earnings. Specifically, they look too low.

The Standard & Poor's 400 stock index earnings for 1987 came in a little more than $20 per share after languishing around $16 for almost a decade. I think normal earnings for 1987 should have been closer to $30 per share. If I'm right, this has very important implications for the stock market and sectors within the market, given the importance of earnings in determining absolute and relative values.

Let's look at the history of corporate earnings from one business cycle peak to the next. Table 1 lists earnings for the S&P 400 starting with the 1957 economic peak and also lists the compound annual rate of growth in earnings adjusted for inflation from the previous cyclical peak. Excluding the unusual 1957 to 1960 cycle, the average rate of real growth in earnings was 3.8%. This compares with a −2.2% real growth rate in the most recent cycle from 1979 to 1987. In other words, unlike recent experience, it is customary to make progress in real corporate earnings from one cycle to the next.

Assuming normal real growth of 3.8% per year during the 1979 to 1987 period, earnings in 1987, after adding back inflation, would have been $32.80, not $20.40. Even if real growth had been only 2.4%, which was the lowest real growth of the four cycles, 1987 earnings would have been $29.40, again well above the actual $20.40 earned last year.

Problems with cyclical companies' earnings became evident as the economy began recovering from the last recession in late 1982. The high dollar short-circuited the normal economic recovery by causing imports to increase and exports to grow at a below-normal rate. Peak earnings for many cyclical companies still date to 1979 or 1978, despite 1987 being the sixth year of the economic recovery.

Unfortunately, many analysts only focus on the past five years, so they conclude earnings potential for many cyclical companies is hopeless.

Our economic system, however, rarely penalizes large and important parts of the economy forever. After all, Americans continue to consume increasing amounts of real goods, which ultimately puts demands on capital goods and basic industries. Now that the dollar is quite low, it does appear the fortunes of these industries are changing.

To grasp the potential of this important segment of our economy, it is necessary to go back before the sharp rise in the dollar, in other words, before 1982.

*Continued on page 22*

YOU'RE LOOKING AT ONE OF THE REASONS OTHER ENERGY COMPANIES WISH THEY WERE QUESTAR.

We're in the energy business from top to bottom.

From our headquarters in Salt Lake City, Utah, we engage in oil and gas exploration and production, interstate transmission and storage, and retail distribution of natural gas in one of the country's fastest-growing regions. Our operations in each area of the company make a significant contribution to Questar's bottom line—which results in greater economic stability.

That diversity is what other energy companies are trying to achieve. We've been there for a long time now.

It's paid off.

Our shareholders have received 173 consecutive dividends; we've increased those dividends 15 times in the last 15 years; and our performance compares favorably with other companies in the energy industry.

Write (or call) for more information. And we'll give you more reasons to take a closer look at Questar.

# '87 earnings

*Continued from page 21*

Table 2 compares the return on equity for a sample of companies representative of the S&P 400 for the 1965-'81 period with 1987 and also with the companies' normal price-earnings ratio. Average return on equity for cyclical companies was considerably higher from 1965 to 1981 than it was in 1987. Return on equity must improve significantly just to get to average conditions experienced from 1965 to 1981. If the 17-year period is representative of normal conditions, it is legitimate to multiply that period's return on equity by current book value to arrive at normal earnings. Remember, these are normal earnings, not peak earnings.

Contrast the cyclical companies with the non-cyclical ones — drug, soft drink and consumer-goods companies. Their 1965-'81 average return on equity is less than it was in 1987, just the opposite of the cyclical companies. That means normal earnings for these non-cyclical companies are less than current earnings, therefore, their normal p/e ratio is quite high. For most consumer-goods companies, current return on equity exceeds historical return. This makes sense because they have had an exceedingly favorable environment the past five years. It is difficult to imagine the next five years treating them as kindly. Not so for basic industry, machinery and equipment, and high-technology companies.

Another method of determining if reported earnings are normal is to compare the past peak earnings per share for the S&P 400 on an individual basis rather than for the index as a whole, as done in Table 3.

The past peak is constructed by taking the peak earnings of each company and weighting them according to the S&P 400. The past peak rises in each of the four years as the companies report new earnings highs as the economy advances.

When the economy is at its peak, actual earnings for each of the four years and past peak earnings should be about the same. When the economy is doing poorly, the difference should be wide.

For 1975, a recession year, the spread between actual and peak was wide: actual earnings needed to go up 27% to equal peak levels. In 1979 the economy peaked, so actual and peak earnings were almost identical. By 1982, the bottom of the last recession, actual earnings needed to go up 48% to match peak earnings. Although peak and actual earnings have risen nicely from 1982 to 1987, the gap between them remains as wide as it was in 1982.

Peak and actual earnings have continued to rise because the consumer sector of the economy has done quite well. The capital-goods oriented companies by contrast have done quite poorly; therefore, the gap between peak and current earnings has not closed.

What implications can be drawn from this analysis?

Current earnings are too low by a substantial margin. The 1987 earnings for the S&P 400 were about $10 too short of what they should have been under normal conditions. Because the normal level of earnings is about $30 not $20, the S&P 400's multiple is 11 not 16. Value judgments using a p/e ratio of 16 are incorrect.

Earnings for many consumer companies are too high and will surprise most investors by staying near current levels for several years. Earnings of the capital-goods companies will expand very rapidly.

Return to normal profits might not occur before the economy slips into a recession. However, I do think normal earnings will be achieved within the next five years. When reported and normal earnings converge, the stocks of capital-goods companies, broadly defined, and small companies will provide above average appreciation. ■

A special report on the best-managed companies in the U.S. will be published in the May 2 issue of *Pensions & Investment Age*.

# 'Pills' up premiums

## Study defends anti-takeover strategies

By John Wilcox

A new study has found poison pills are fulfilling their stated purpose of increasing target managements' bargaining power to maximize shareholder value, which suggests investment managers operating under Employee Retirement Income Security Act guidelines should support the implementation of these shareholder rights plans by corporations.

The Georgeson & Co. Inc., New York, study of hostile tender offers concludes target companies protected by poison pills command substantially higher takeover premiums than companies without them.

Georgeson examined 47 corporations that were the subject of hostile tender offers between Jan. 1, 1986, and Oct. 1, 1987. About half of these target companies had shareholder rights plans at the time of the takeover.

The study showed companies with poison pills received final offers averaging about 75% above their price six months before the bidding wars began, compared with only about 55% average gain for unprotected companies.

Because some of these gains were the result of the strong bull market during the period covered by the study, the results also were analyzed to adjust for changes in the Standard & Poor's 500 stock index average. The analysis showed final bids for companies with poison pills outperformed the S&P 500 by an average of 50%, while companies without poison pills beat the index by only 30%.

So, adjusted for changes in the S&P 500, premiums for companies protected by pills averaged only 50% greater than companies without poison pills. These results indicate shareholder rights plans add significant value for shareholders in hostile takeovers.

Shareholder rights plans are highly controversial.

Proponents claim the plans prevent takeover abuses, give bargaining power to corporate managements and shareholders faced with hostile takeover bids, provide a balancing mechanism against speculative market forces (particularly risk arbitrageurs) activated by hostile takeovers and, ultimately, result in higher prices for shareholders. The Georgeson study supports at least the last of these contentions.

The primary arguments against poison pills are that they are undemocratic because shareholders do not vote on implementation of the plan and that they have a chilling effect that prevents hostile takeovers from occurring and thereby deprives shareholders of takeover premiums.

In response, most proponents argue rights plans are legally within the power of corporate boards of directors to implement. The courts have, in most cases, upheld the plans.

A few proponents have gone further and claimed the lack of voting rights on poison pills is defensible because, in the context of tender offers, shareholders do not have voting rights with respect to changes of corporate control. In effect, this argument says that because federal law does not permit shareholders to vote on tender offers, it is equally appropriate they cannot vote on poison pills.

The claim that poison pills prevent takeovers is difficult to quantify or statistically validate. Circumstantial evidence, however, suggests poison pills do not prevent takeovers. The Georgeson study shows there were almost as many hostile takeovers for targets with poison pills as for targets without them. Furthermore, during the period since late 1985 when poison pills were first given court approval in the Household Finance case, mergermania has continued unabated (except for a brief period following the market crash).

Poison pill plans proliferated during this period while hostile takeover activity was undiminished. These facts provide evidence poison pills do not inhibit takeovers.

Despite this evidence, there is a

# Proxy fights taking shape

By Marcia Parker

It's that time of year again when institutional shareholders and company management either tango or duel over a wide range of proxy resolutions that are the focal point of corporate America's annual meeting rite.

With the first annual meetings less than a month away, institutional stockholders are being bombarded with persuasive pleas. Institutional investors and proxy solicitors are seeking support for their respective positions on everything from divestment in South Africa to barring greenmail payments to raiders.

The pleas come in the form of a barrage of phone calls, solicitation letters and newspaper ads; all tout the viewpoints of institutional investors, corporate raiders and corporate managements locked in battle over proxy contests and tender offers.

This year, many institutional investors are targeting the proxy voting system itself, with scores of resolutions calling on companies to adopt confidential balloting and to give all shareholders equal access to the proxy statements. Others are sponsoring proxy resolutions asking companies to rescind or put to a shareholder vote anti-takeover defenses.

These institutions — led by the California Public Employees' Retirement System, the California State Teachers' Retirement System, the New York City Retirement Systems and the Teachers Insurance and Annuity Association-College Retirement Equities Fund — hope to build on the qualified success they achieved last year as sponsors of a host of proxy resolutions. While none of the resolutions passed, they won considerable support from other shareholders. Observers predict institutional sponsors will do even better this year.

The 1988 annual meeting season also is being spiced up by hostile tender offers.

Two of the hottest contests are The Coniston Group's run at the Gillette Co. and Bank of New York attempting a takeover of Irving Bank Corp. Coniston and Bank of New York have launched proxy contests and are seeking the election of their slates of directors at the April 21 annual meetings of both Gillette and Irving.

# Votes under microscope

## Avon letter sets process

By Robert Monks and Nell Minow

The Department of Labor's first formal statement on the obligations of ERISA fiduciaries with regard to proxy voting will have a seismic effect on the way the ownership aspects of ERISA funds are exercised.

The department's statement came in the form of a Feb. 23 letter to Avon Products Inc., New York, whose proxy voting procedures were under investigation (*Pensions & Investment Age*, March 7). In the letter, Deputy Assistant Secretary Alan D. Lebowitz made it clear that ownership powers, including proxy voting, are an asset of the plan and must be exercised for the exclusive benefit of plan participants. The only acceptable consideration is the continued viability and strength of the plan.

David Walker, assistant secretary of labor, noted in a recent speech to the members of the United Shareholders Association that to comply with this statement, ERISA fiduciaries with voting authority must have written policies governing proxy voting (*P&I Age*, Feb. 22).

They must evaluate all options, including proxies, by weighing the costs and the benefits. All votes must be documented, along with the reasons.

According to the first major study of how pension plans handle proxy voting, published last year by the Employee Benefits Research Institute, many companies that have their pension plans managed by outside firms do not even know if the proxies are being voted (*P&I Age*, Sept. 21).

Nell Minow is general counsel at Institutional Shareholder Services, Inc., a Washington-based firm advising institutional investors. Robert Monks is president of the firm.

More than 60% of the small plans with equity assets of less than $25 million reported they do not vote at all. Those who allow their outside managers to vote exercise very little oversight: 98% said they never or rarely gave voting instructions; less than a quarter of sponsors with external managers attempted to coordinate the voting of the managers; and 68% did not know if their managers ever cast contradictory votes.

Even though proxies voted by internal managers were more likely to be overseen by plan sponsors and more likely to be subject to written guidelines on voting, EBRI found they were just as likely to be voted inconsistently as those voted by outside managers.

Under the Labor Department's new standard, proxy votes cast inconsistently because of negligence in communicating and applying policies are simply unacceptable.

In the past, few plans have made an effort even to match the shares held on the record date with the proxies received. It is clear these plans are not only required to do so, but that it must be documented.

There will be instances when a

*Continued on page 27*

# Proxy votes

*Continued from page 25*

fund manager or a bank is acting in different capacities with regard to different sections of a portfolio. (All relationships under the Employee Retirement Income Security Act must be in writing.)

The plan documents must be analyzed carefully to determine who has the fiduciary obligations with regard to ownership.

For example, a bank might be operating as a master trustee, a custodian, a trustee of pooled funds, or an ERISA fiduciary. All of these functions have different implications and impose different obligations on the bank. The distinctions are particularly important with regard to who can and who cannot advise on proxy issues.

The documentation must extend beyond verifying that all shares were voted. For non-routine matters, it also must demonstrate the supporting analysis.

Even matters that might appear routine, such as election of unopposed directors, might raise fiduciary issues.

If director candidates have a record of approving actions contrary to shareholders' interests, either in the company for which they are a candidate or other companies, fiduciaries might be required to vote against them. At the very least, they must be able to justify that their action meets the same standards of prudence and reasonableness accorded to other aspects of asset management.

Special documentation will be required for any issue not covered by the written guidelines, or any deviation from those written guidelines.

Banks and outside asset managers will be presented, from time to time, with potential conflicts of interests.

At a bank, the loan department might try to influence the plan manager to vote for management of a good customer, even if it is contrary to the interests of the pension plan's beneficiaries. An asset manager can be pressured by other clients.

Any contacts from individuals inside or outside the organization with regard to proxy voting or tender offers or other ownership issues must be noted for the record. Policy guidelines must make provisions for these cases.

In most instances, it will be sufficient to comply with the written guidelines, which might create a per se standard of prudence and reasonableness. In some cases, however, an independent fiduciary might be required.

The policy statement issued by the Labor Department has gone very far in making clear the obligations of a fiduciary under the Employee Retirement Income Security Act with regard to proxy voting. But the policy statement also raises two important questions that remain unresolved.

The first concerns the obligations of an ERISA fiduciary for other aspects of ownership. These aspects include more activist endeavors. When must a fiduciary propose a shareholder resolution, for example?

A forthcoming law bulletin article written by Morton Klevan, the director of policy development and evaluation, Pension and Welfare Benefits Administration, compares ERISA fiduciaries to common law trustees, who must view rights such as a cause of action for a lawsuit as an asset of a plan, and must therefore take action when it is prudent and reasonable to do so. Policy guidelines for voting proxies should also contain criteria for evaluating other options available to the shareholder.

The second issue the policy statement raises concerns the obligations of other fiduciaries who manage assets, public pension plans and assets held under the Investment Company Act, for example.

A case could easily be made the same concerns exist and the same standards apply. The statement issued by the Labor Department sets an important precedent that will lead to changes in those areas as well. ■

# Study

*Continued from page 25*

common assumption that poison pills are not in the best interests of shareholders. During the 1987 proxy season, more than 30 corporations faced shareholder-sponsored proposals calling for rescission of poison pills or submission of the plans to approval by shareholder vote. In 1988, these proposals again will be on the ballot.

On the basis of the Georgeson study, serious questions arise as to whether the poison pill rescission proposals themselves may be against the interests of shareholders.

ERISA proxy voting guidelines were issued in a Feb. 23 letter to Avon Products Inc. signed by Alan D. Lebowitz, deputy assistant secretary of labor (*Pensions & Investment Age*, March 21). In light of the Georgeson study, it is arguable that fiduciaries are violating ERISA requirements if they fail to support poison pill plans or if they seek to have them rescinded.

Although the bulk of Mr. Lebowitz's letter deals with procedural matters relating to the delegation of voting responsibilities, a footnote describes "substantive requirements" for proxy voting by fiduciaries.

The key wording states a fiduciary of a plan must act "... for the exclusive purpose of providing benefits to participants and beneficiaries."

To act prudently in the voting of proxies (as well as in all other fiduciary matters), a plan fiduciary must consider those factors which would affect *the value of the plan's investment*." (emphasis added).

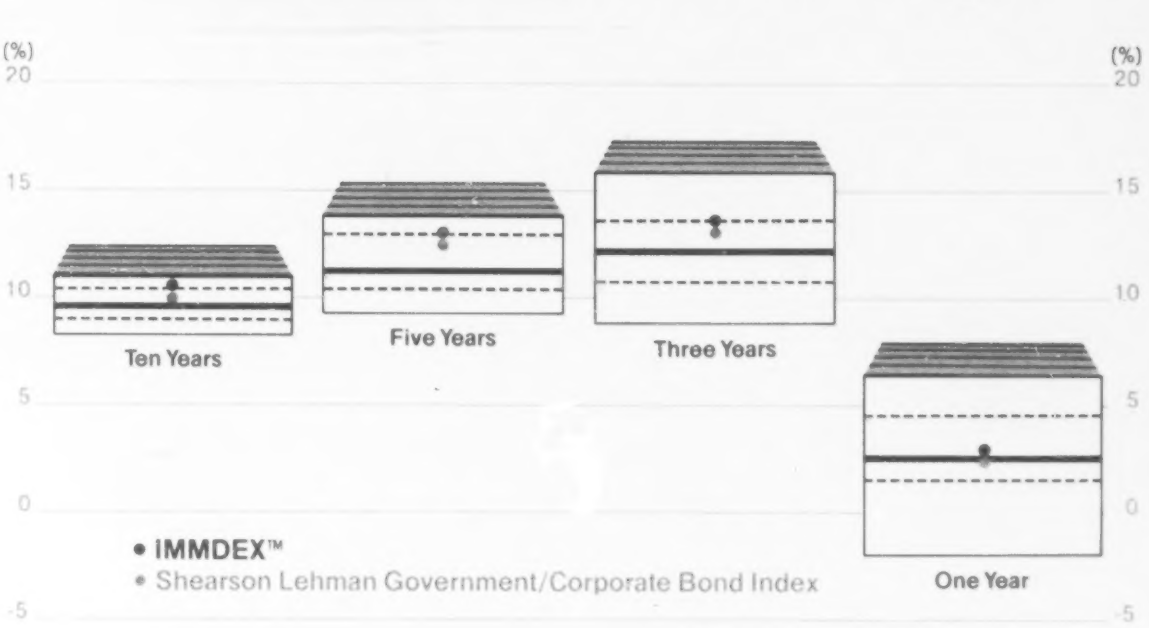
The last sentence of this footnote explicitly prohibits a fiduciary "... from subordinating the interests of participants and beneficiaries in their retirement income to *unrelated objectives*" (emphasis added).

The Georgeson study suggests that in hostile takeovers, poison pills help maximize value for shareholders. Evidence that poison pills prevent takeovers or otherwise interfere with shareholders' ability to obtain premiums is non-existent. Furthermore, circumstantial evidence indicates poison pills do not prevent takeovers.

Thus the only justification for a fiduciary objecting to poison pills is on grounds of principle — i.e., an objection to the "undemocratic" lack of shareholder voting rights when the plans are implemented.

Objection on principle, however, would appear to be an "unrelated objective," which is barred from consideration by fiduciaries under the footnote of the Lebowitz letter. ■

Bond Indexation with the IMMDEX™ advantage.



Bond fund total rates of return for periods ended December 31, 1987. Source SEI.

The Shearson Lehman Government/Corporate Bond Index has provided superior performance when compared to active fixed income managers. The Index has consistently provided first or strong second quartile returns over most time periods.

Immdex is a unique bond management system in which the annual return will **match** or **exceed** the index rate of return. On the basis of actual experience, **IMMDEX has added an average of 65 basis points of excess annual return to the Shearson Lehman Government/ Corporate Bond Index.**

Immdex accomplishes this objective through two strategies:

- The index rate of return is achieved through a proprietary duration-matching strategy.
- Immdex capitalizes on market opportunities to further enhance total return.

First Wisconsin Trust Company is a leader in the area of quantitative fixed income management and we believe that the Immdex advantage will prove to be an attractive alternative to your current bond management approach.

Let us review how Immdex provides positive tracking to the Shearson Lehman Government/ Corporate Bond Index and enhanced market returns through the use of bond management techniques. Call or write Charles Groeschell at First Wisconsin Trust Company, First Wisconsin Center, Box 2054, Milwaukee, Wisconsin 53201. (414) 765-4789.

# Street ups trading costs

## 6 months later

By Barry B. Burr
and Joel Chernoff

Since the October market crash, execution costs on principal, institutional trades have risen while brokerage costs for the easier agency trades have fallen, decreasing the attractiveness of soft-dollar services, among other side effects.

Lower equity trading volume and greater uncertainty about volatility generally have made trading more difficult; widening bid/ask spreads and increasing caution among dealers about committing capital to trades have added to execution costs.

Equity trading executives at Allen & Co., Bear Stearns & Co., First Boston Corp. and Goldman, Sachs & Co., all of New York, said their companies have raised costs for principal trades since October, but all declined to provide specific figures.

At Goldman, Sachs, Dexter Earle, vice president, said, "For principal trades, our (commission) rates have gone up and spreads have widened."

Luis S. Mendez, First Boston managing director, said, "Commission rates are up in relation to principal trades because liquidity is less. On agency trades, commission costs are lower. I can tell you right now I'm not having any luck raising (agency) commissions."

Rates "are definitely more for principal" trades, said William Mitchell Jennings, Bear Stearns managing director.

Brokerage commissions have fallen on average for agency trades as more brokerage firms fight to maintain as much revenue as possible in the face of declining market volume.

**A look at how pension fund asset allocation, the breadth and depth of the stock market and the state of hedging strategies have changed six months after Black Monday — Page 3.**

Unlike the others interviewed, Mr. Jennings said his company also has raised average commission rates "a little" for agency, or brokered, trades where dealers act only as agents and commit no capital.

Off-market institutional trading networks — Instinet Corp.'s Crossing Network and the BARRA Inc. and Jefferies & Co. Inc.'s Portfolio System for Institutional Trading — claim to have gained volume in the last two quarters; representatives, however, won't release specific figures. Commissions are 1 cent a share for the Crossing Network; and 1 to 2 cents for POSIT. Trades are done at the closing price, having no market impact.

With trading volume down since October, brokerage industry executives noted managers that pay for services by channeling trading commissions to designated brokerage companies face a squeeze. Managers have to cut back on such services, or devote a larger share of their trades to generate soft dollars, leaving fewer trades to dedicate solely to execution considerations.

A study by SEI Corp., New York, found that during the fourth quarter, excluding the extraordinary trading

# CFO salaries climb: 1 earns $900,000-plus

By Marcia Parker

Courtney F. Jones, who earned $902,400 at Merrill Lynch & Co. in 1987, is the highest paid chief financial officer among more than 100 public companies sampled by *Pensions & Investment Age*.

Thomas O. Thorsen's salary of $875,500 at The Travelers Cos. garnered him the No. 2 spot. Textron Inc.'s Dennis G. Little was third, with $770,361, the highest-paid chief financial officer among about 20 Fortune 100 companies in the survey.

All three men hold the dual titles of executive vice president and chief financial officer.

At well-known companies, W. Keith Smith, a vice chairman and chief financial officer of Mellon Bank Corp., was among the lowest paid: He earned $188,514 last year, of which $133,514 was salary and $55,000 was bonus. Some chief financial officers of smaller, regional banks earned less.

Bethlehem Steel Corp.'s Gary L. Millenbruch was the lowest paid at Fortune 100 companies in the survey. He earned $283,750 as senior vice president and chief financial officer.

Data for the survey came from the companies' proxy statements, which list the companies' five most highly compensated executives. Public companies must report that information to the Securities and

# Young plans in bind over funding limits

By Nicky Robertshaw

WASHINGTON — The new full-funding limit for pension funds is giving executives at Digital Equipment Corp. and other companies a headache.

Digital, which has been lobbying heavily for relief from the law that prohibits tax-deductible pension contributions once the assets reach 150% of current liabilities, is typical of companies most vulnerable to problems under the law.

The company has a young work force, with a median age of 34; it has experienced significant growth in profits and numbers of new employees; and out of 67,000 participants, it has only 1,000 retirees.

Because current liability does not take into account projected benefit obligations, Digital would be precluded from contributing to its pension plan for the next four to six years, said Crace L. Hinchman, manager of public affairs for Digital's Washington office.

The market value of Digital's pension assets was $758 million as of September 1987; the projected liabilities were $592 million. Contribution data were not available.

"While we've been (funding the plan based on projected benefit obligations) because we believe it is our responsibility to fund today, Congress has precluded us from doing that," Ms. Hinchman said. "Now we're going to have to pay for future benefits in the future, when we don't know if we'll be as healthy."

She added the policy is at odds with the mandate of the Employee Retirement Income Security Act to fund consistently over time, and has the effect of penalizing companies that are healthy and are adding to their work forces.

While the problems faced by young funds such as Digital's

## LATE NEWS

### Wheeling-Pitt plans still unsettled

WASHINGTON — The $85 million settlement in principle between the PBGC and Wheeling-Pittsburgh Steel Corp. on the agency's claims in the steelmaker's bankruptcy proceedings still leaves unresolved the issue of whether any new plans the company establishes would be illegal follow-on pension plans.

Under the terms of the settlement, Wheeling-Pittsburgh will pay $60 million in cash to the Pension Benefit Guaranty Corp. upon confirmation of its plan of reorganization by a federal bankruptcy court and $25 million in the form of a note payable six years after the initial distribution.

"We believe it is a fair and equitable settlement for both sides," said an attorney for Wheeling-Pittsburgh, adding he hoped the settlement was a harbinger of the PBGC's being somewhat accommodating on the issue of the steelmaker's new pension plans. A court hearing on the replacement plans will be held in June; a temporary benefit plan expires in August.

Royal S. Dellinger, PBGC deputy executive director, said the settlement is significant because, among other reasons, it reinforces the priority of the agency's claims for the employer contributions due to the plans between bankruptcy filing and the termination of the plans.

### Arnott leaving Salomon Brothers

NEW YORK — Robert D. Arnott is leaving Salomon Brothers Inc. after a year as vice president and strategist to become president and chief investment officer of First Quadrant Corp., a Morristown, N.J., in-house investment unit of Crum & Forster Inc., an insurance company whose ultimate parent is Xerox Corp., Stamford, Conn.

First Quadrant has no outside clients. Robert M. Lovell Jr., who was promoted to the new position of chairman from president, said Mr. Arnott's task will be to develop institutional business, overseeing both marketing and investment strategy. First Quadrant now runs $6 billion in Crum & Forster assets, all in fixed income except about $700 million in equities; its only other assets come from two Xerox-related accounts and total $70 million in equities, Mr. Lovell said.

Salomon executives were unavailable for comment.

### Landauer unit spinoff possible

NEW YORK — Landauer Associates Inc. could spin off its institutional investment management unit as part of a possible restructuring being discussed by management and the three foreign institutional owners of the real estate services company.

Landauer executives plan to meet April 19 to discuss various restructuring possibilities. Spinning off the advisory unit, Landauer Advisors Inc., "is certainly a conceivable option," a source said. The source added, however, if Landauer Advisors were spun off, Barings Inc., London, probably would become sole owner of the unit, although management could be asked to participate in the buy-out.

Baring, along with Hilliar Parker, London, and Societes Bordais, Paris, own 70% of Landauer Associates. Landauer's management owns the remaining 30% of the firm, which also operates valuation and financing units.

Landauer Advisors runs $712 million in real estate assets, of which $113 million is tax exempt.

### Funds announce asset moves

• HARTFORD, Conn. — The $4 billion pension fund of United Technologies Corp., Hartford, Conn., has committed between $5 million and $20 million to the CERF II closed-end real estate investment fund managed by CIGNA Investment Inc., Hartford, said Frances M. Crimbly, director-pension investments.

• HARTFORD, Conn. — The $5.8 billion State of Connecticut Trust Funds has taken a novel approach to active international stock investing, relieving four new managers of the regional asset allocation responsibility by splitting assets among Pacific Basin accounts and European accounts, according to Frank P. McDermott, assistant treasurer-investments.

Hired to manage $25 million each were: Nomura Capital Management Inc., New York, and Schroder Capital Management International Inc., New York, for Pacific Basin portfolios; and Fidelity International Investment Advisors, Boston, and Capital Guardian Trust Co., Los Angeles, for European portfolios.

The fund also added $50 million to a $100 million international passive stock account with Boston International Advisors Inc., Boston.

• MINNEAPOLIS — The $340 million Cargill Inc. pension fund has committed $20 million in undisclosed amounts to three commingled real estate funds — the Property Fund III closed-end fund managed by Lehndorff & Babson Real Estate Counsel, Dallas; the closed-end Realty Fund V managed by TCW Realty Advisors, Los Angeles; and the open-end Real Estate Equity Fund of First Asset Realty Advisors, Minneapolis.

# KKR refinances LBO with mortgage sale

## Jim Walter deal could become model

By Brad Rudin

In what could become a model for the long-term financing of other leveraged buy-outs, Kohlberg Kravis Roberts & Co. used a $1.45 billion sale of mortgage assets to pay down bank debt associated with the firm's buy-out of Jim Walter Corp.

Jim Walter, which markets standardized single-family homes, was acquired by KKR in a $2.3 billion leveraged buy-out last year.

The transaction marks the first time financial assets such as mortgages were sold to take out leveraged buy-out bank debt.

"KKR reasoned that the marketplace, in evaluating the stock of Jim Walter Corp., was not properly evaluating the assets of Mid-State Homes, which is the mortgage finance subsidiary of Jim Walter," said Peter E. Hoey, a senior vice president with Financial Security Assurance Inc., New York, which provided a surety bond that guarantees noteholders the full payment of interest and principal.

The FSA guarantee shaved off about 75 basis points from the coupon, Mr. Hoey said, adding the net saving to the issuer was about half that amount because of the premium paid to FSA.

FSA required collateralization in excess of 20%, or about $1.75 billion, in mortgages to secure $1.45 billion of notes.

If the collateral were liquidated in the event of default, investors would be protected from the risk of accelerated payment by a defeasance structure that calls upon FSA to buy high-quality securities whose cash flow would satisfy the principal and interest payments due on the notes.

An AAA rating from Moody's Investors Service and Standard & Poor's Corp. was a condition for issuance of the notes.

The mortgage-backed notes were issued by Mid-State Trust II, which was created by Mid-State Homes Inc. Salomon Brothers Inc. was lead manager of the public offering while Drexel Burnham Lambert Inc. served as co-manager.

Mid-State Homes acts as servicing agent for the mortgage collections, getting an annual fee of $240 for each of the 74,298 accounts collateralizing the notes.

KKR reportedly first attempted to sell the notes in a private placement led by Drexel, but abandoned that course after the deal received a cool reception from Prudential Insurance Co. of America, which was going to buy a large portion of the deal.

The public offering, priced earlier this month, appeals to a wide range of investors because it

# Funds dumped shares before Black Monday

By Nicky Robertshaw

WASHINGTON — Pension fund executives and their money managers did most of their stock selling before Black Monday, the Employee Benefit Research Institute reported.

Indeed, private trusteed pension funds sold just 1% of all directly held equity holdings between Oct. 1 and Dec. 31 — a net of $5 billion — compared with net sales of $14 billion during the third quarter and $34 billion during the first three quarters of 1987, EBRI data showed.

(Directly held stocks are those purchased outright, rather than shares held through investments in pooled or mutual funds.)

EBRI's study, released last week, is one of the first objective indicators of pension fund behavior during last year's volatile stock market.

Dallas Salisbury, president of the Washington-based EBRI, said the findings parallel those of the Brady Commission, which concluded pension funds were not a significant player when the Dow Jones industrial average plunged 508 points Oct. 19.

(There were exceptions, however, including the pension fund of General Motors Corp., New York — which sold $1 billion in equities — and users of portfolio insurance and other derivative instruments.)

EBRI's findings also reinforce those of SEI Funds Evaluation Services: Purchases represented 51.3% of the dollars traded by investment managers in SEI's universe during the five, heavier-than-usual trading days between Oct. 15 and Oct. 21.

"This supports the conclusion of the Brady Commission that much of the net selling during this period was conducted by portfolio insurers and mutual funds, and generally not pension funds," said the report by SEI of Wayne, Pa.

Mr. Salisbury said pension funds likely sold more stock before the crash than after because they sold "when they had capital gains to make, but not in the fourth quarter when they would have taken losses . . . Why take capital losses when you're in it for the long term?"

He also speculated that pension executives feared the bull market had run its course.

Industry observers were not

CHIEF FINANCIAL OFFICERS

# A new breed for complex times

## More status comes with added duties

By Marcia Parker

Corporate America's chief financial officers are playing a more dynamic role in the core management team today, a reflection of their changing jobs, rising status and demand from other company executives for their input on key business and strategic decisions.

The deregulation and globalization of the capital markets, keen international competition, the rise of financial engineering, merger and acquisition mania, tangled tax laws and the emphasis on highly active asset management all have combined to make top management rely more on the chief financial officer for insight. That in turn makes the job broader, more difficult and more challenging.

"The challenges make a CFO gray," quipped Jules Zimmerman, group vice president-finance and chief financial officer of Avon Products Inc., New York.

Interviews with more than 12 chief financial officers found each approaches his or her job differently and the jobs vary widely by company. More and more of them are in the five most highly compensated executives group and have added other titles including vice chairman and director, reflecting their higher status.

All agree they have more responsibility, manage bigger staffs and are increasingly involved in all aspects of corporate decision-making.

Restructuring projects and activities related to mergers and acquisitions are taking up a lot more of their time today. They say the most difficult part of their job is keeping abreast of the rapidly changing world.

Responding to those changes, the Financial Executives Institute, whose members include about 1,000 chief financial officers, is trying to meet its members' needs by offering seminars and articles in its publications on topics that reflect the financial officer's increasingly broad interests and duties. In the months ahead, conferences are scheduled on Wall Street's volatility, the aftermath of Black Monday, corporate restructuring and mergers and acquisitions, and information management.

"The role hasn't changed as much as the environment has changed," said H. Clark Jr., executive vice president and chief financial officer at American Express Co., New York. "There's the changing financial markets, globalization and new financial instruments, complexity of U.S. and foreign tax laws, accounting changes, investment opportunities and credit quality concerns."

The whole world is more complex and more volatile, compared with the stability of years past, said William H. Springer, vice chairman and chief financial and administrative officer at American Information Technologies Corp., Chicago. "The challenge is to maintain the energy level. There's an awful lot of reading, traveling, communicating," Mr.

# A new breed

*Continued from page 13*

Springer said. "You're involved every hour of every day. There's a broad base of people to supervise. You have to keep abreast of what's going on inside and outside the business, you've got to keep in front of the pack."

Today the chief financial officer has to wear a number of hats. The CFO must help analyze mergers and acquisitions, be adept at finding creative and cost-efficient ways of raising money in capital markets worldwide, manage foreign exchange exposure, oversee the investment of huge pension funds and corporate cash, fashion tax strategies, constantly monitor and measure corporate asset performance, spot poor performing assets and dispose of them, and much more.

The financial officer also has to track interest rates and currency fluctuations, keep up with international trade issues and global stock market developments, spot windows for financing throughout the world, master an array of financial instruments, and be able to assess the financial implications of business decisions. To juggle all these diverse duties, agility is a plus.

"There are a whole myriad of products coming off the street that they have to be up to speed on," said Ted Jadick, partner with Heidrick & Struggles Inc., New York, an executive recruitment firm.

Job qualifications — both academic credentials and practical experience — have increased as the work of the chief financial officer has become more complex, he said.

"Now you're finding that the stronger CFOs have undergraduate degrees, MBAs and they come up through the treasury side where they are interfacing with the financial community," Mr. Jadick said. In the past, chief financial officers came to the job with an undergraduate degree in accounting and a background on the control side of the business.

Among the biggest challenges those interviewed cited is the array of financial instruments that can be tapped when companies need to raise money.

"The CFO always had to provide financing sources for the company. But it used to be you'd go to your investment banker and get a 25-year bond," Avon's Mr. Zimmerman said. "All the borrowing was the same plain-vanilla, fixed-rate type. Now the nature of the financial products out there requires expertise in currency and interest rate swaps and many other areas."

Others, however, contend the technical demands on chief financial officers can be overstated.

"I find that most CFOs I've dealt with don't tend to get too technically involved," said David Blair, president of Bushell Blair & Associates, a New York-based executive search firm. "I've heard so many managers at the $100,000 level-plus say, 'At my level, you understand, I don't need to know these things.' "

Maria Monet, chief financial officer at Ogden Corp., New York, and president of Ogden Financial Services, spends a good deal of her time developing innovative financing vehicles for Ogden resource recovery plants and other Ogden subsidiaries.

All the financial officers interviewed said hiring the best and the brightest staffs they can find goes a long way toward making their jobs easier.

D.W. Russler, senior vice president-finance and administration, and chief financial officer, NCR Corp., Dayton, Ohio, said the competition for the best and the brightest is getting tougher. "It's a very competitive environment. The competition from companies, big eight accounting firms, and U.S. industry is fierce," he said.

"No CFO is totally qualified to do it all," Avon's Mr. Zimmerman said. "You get the best people." ■

Kemper Financial

Kemper Financial Services, Inc., Chicago, IL

# Suit filed over loss in crash

KANSAS CITY, Mo. — Utilicorp United Inc. is seeking $11.8 million in damages from Kemper Financial Services Inc., Chicago, claiming the money manager did not liquidate a stock portfolio prior to the October crash as instructed.

The suit states Kemper, which managed approximately $20 million in a separate account for a Utilicorp pension fund, was instructed to liquidate $8 million Oct. 14 and to transfer the cash Oct. 21 to The United Missouri Bank of Kansas City, Utilicorp's master trustee.

The suit states Kemper failed to follow through and the trustee received only $2 million Oct. 21. The suit states Kemper delayed the process, liquidating $2 million Oct. 20, $3 million Oct. 21 and $3 million Oct. 22.

According to the lawsuit, Kemper later misrepresented the dates on which the liquidation took place.

Utilicorp's employee benefit assets total approximately $45 million and consist of seven defined benefit plans.

The suit asks for actual damages of $1.8 million — the amount the utility claims it lost by the delay — and $10 million in punitive damages.

Kemper officials denied the mishandling, saying they were not given instructions regarding the redemption until the day the market crashed.

Charles Kierscht, president of Kemper, said the utility "did tell us Oct. 14 that $8 million would be moving to another manager and that the other manager would contact us regarding the transfer.

"The new manager didn't contact us until the close of business Oct. 19 and said he would take cash" instead of securities, Mr. Kierscht said. "We liquidated over the next three days, and I can't understand why the lawsuit was filed."

Bank officials and the bank's attorney would not comment on the lawsuit.

Steve Cochennet, senior manager-administration at Utilicorp, referred questions to the company's attorney, William H. Sanders, who is a partner with the Kansas City law firm of Blackwell, Sanders, Matheny, Weary & Lombardi.

"They were told to sell," Mr. Sanders said. "It's not up to the manager to tell them.

"They were told to sell by Utilicorp, and they agreed to sell, and the new manager did call and left his name that day," he said.

United Missouri Bank filed the suit on behalf of the company in U.S. District Court in Kansas City. ■

# Debt-for-stock swap pulls Savin to safety

## Bankruptcy threat dissolves with offer

By Brad Rudin

STAMFORD, Conn. — Savin Corp. stepped back from the brink of bankruptcy late last month after creditors agreed to a revised exchange offer in which debt will be swapped for convertible preferred stock.

With the exchange offer almost in place, Savin can look forward to a healthier balance sheet and the prospect of an alliance with an innovative business partner.

The copier distributor's earlier offer to swap debt and preferred stock for common stock ran into resistance from creditors, who balked at the prospect of turning in their bonds for a junior security.

"Some people criticized us for initially printing an offer that basically said that all debt has to go to common stock," said Ralph O. Hellmold, managing director and head of the workout group at Prudential-Bache Capital Funding, New York, which serves as Savin's financial adviser. "I learned a long time ago that if you don't ask for something aggressive you have no hope of ending up with something realistic."

Because the exchange offer calls upon Polysar Energy & Chemical Corp., Toronto, a major Savin shareholder, to swap notes totaling $77.1 million for preferred stock, the deal prevents the bankruptcy petition that would have followed if Polysar demanded for payment on the notes. Polysar's agreement to swap its debt for preferred stock is contingent on an 85% exchange of increasing-rate notes for preferred stock.

**"Two years ago the company lost . . . $36 million to $40 million from operations and the share price was about 7. A year ago we lost $9.2 million from operations and share price was 3 or 3¼. Now we finally show a profit for the first time in seven years and my shares are selling for a quarter. Give me a break."**

**— David G. Sadler**
**Chairman and CEO**

The exchange offer, formulated with the help of Prudential-Bache, follows by two years an offer completed under the guidance of another financial adviser. In that offer, Savin replaced long-term debt with shorter-term obligations.

Because the zero-coupon bonds created in the earlier exchange could be converted into common stock and because interest on other debt could be paid in common stock, the number of outstanding shares increased to 60

# Activity returns with new strength

By Brad Rudin

NEW YORK — Breaking out of its long-held position in the middle of the bulge bracket, Merrill Lynch Capital Markets Inc. grabbed the biggest share of the first quarter's expanding underwriting business.

Total domestic volume rose to $67.9 billion in the first quarter, up 58% from the $43.1 billion level reached in the last quarter of 1987, according to IDD Information Services Inc., New York. Still, underwriting volume is much lower than the $89.5 billion figure recorded in the first quarter of last year.

The generally improving stock market encouraged a 34% increase in common stock underwritings to $7.7 billion in the first quarter from $5.8 billion in the fourth quarter of 1987. The volume of initial public offerings tripled to $7.1 billion in the first quarter of 1988 from $2.4 billion the previous quarter, according to IDD data.

A bond market rally in the first half of the first quarter fueled debt underwriting activity. The rally gave issuers "the most attractive financing opportunities in medium- and long-term maturities in two years," according to the Feb. 12 issue of Comments on Credit, a Salomon Brothers Inc. publication.

Industrial issuers have been encouraged to tap the debt market because of the positive economic news released during the first quarter, said Peter Skaperdas, a vice president in Salomon's fixed-income research unit.

Although the bond market fizzled in the middle of the first quarter, the financing environment for issuers remained relatively favorable because spreads against Treasuries remained tight, Mr. Skaperdas said. "We still think it's a favorable environment for issuers."

The expanding volume of public offerings accompanied a wider sharing of underwriting business. The top five firms did 65% of the domestic underwriting business in the first quarter compared with 70% in the fourth quarter of 1987.

Displacing Salomon, the traditional leader in the underwriting league tables, Merrill Lynch took 17.2% of all first-quarter domestic underwriting business. Salomon, which finished the quarter in second place, did 14.3% of the business. Third-place Goldman, Sachs & Co. took a

# High-yield bond defaults rocket; Texaco role key

By Brad Rudin

Swollen by the bankruptcy of Texaco Inc., the default rate of high-yield bonds almost doubled to 6.7% in 1987 from about 3.4% the previous year, according to a report by Morgan Stanley & Co. Inc., New York.

Excluding the Texaco bankruptcy, the 1987 default rate "was an unexceptional 1.215%," according to the report. Texaco accounted for $6.6 billion of the $8.2 billion of defaulting debt.

Morgan Stanley's report adds more data to a debate sparked by a General Accounting Office hearing last month on high-yield securities. The hearing was in response to congressional concerns about the impact of high-yield securities on corporate takeovers and the risks to federal insurance funds for federally insured deposit institutions that invest in the securities.

Representatives from Standard & Poor's Corp., the U.S. League of Savings Institutions and the Alliance for Capital Access — a group of companies that favors open access to high-yield financing — testified at the hearing. Edwin Altman, a professor at New York University, and other members of the business and academic communities also testified.

Morgan Stanley was not represented at the hearing.

The firm's report, an update of high-yield market research, assesses the risks and rewards associated with high-yield bonds and suggests strategies that would maximize investor returns.

Default loss-rate data present a more accurate picture of the risk associated with high-yield securities than straight default rate data because the numbers reflect the price of the bond after default, according to the Morgan Stanley report.

High-yield investors experienced a default loss rate of slightly more 2.9% in 1987 compared with a cumulative average default loss rate of about 1.5% during the period from 1974 to 1986.

Pointing to the rewards of high-yield bond portfolio management in a bear market, Morgan Stanley noted low-rated bonds outperformed long-term Treasury securities by 712 basis points last year.

Morgan Stanley suggests in its report managers use low-rated securities to diversify the risks of an interest-rate sensitive portfolio because high-yield bonds are less sensitive to interest rate movements than other securities.

At the GAO hearing in Washington, Gail I. Hessol, a managing director at New York-based Standard & Poor's, said the default rate will increase in the next four years. Companies that have low-rated debt because of restructurings have not shown up in default statistics yet, Ms. Hessol noted. "It is only a matter of time before potential problems materialize for some," she said.

Martin S. Fridson, a principal in the credit research group at Morgan Stanley, said in an interview that predictions of substantial increases in the high-yield default rates could not be established. "I really don't know. We're in new territory," he said. ■

# Twist added to offering

NEW YORK — Building on its successful introduction of inflation-linked bonds, Morgan Stanley & Co. added a put option to its second offering of the new product.

The deal — popular among pension fund managers — sold quickly despite the novelty of the product, said Richard J. Rogalski, a vice president in the new products group at Morgan Stanley who also is a professor of finance at the Amos Tuck School of Business Administration, Dartmouth College.

Morgan Stanley this month was lead manager for a $100 million offering of inflation-linked bonds, called Real Yield Securities or REALS, for Franklin Savings Association, Ottawa, Kan. The product made its debut in January when Franklin made a $170 million REALS offering.

Because REALS pay a floating rate of interest fixed at a spread above changes in the Consumer Price Index, the instrument assures investors of a positive real rate of return.

The January issue was set at a 300 basis-point spread above the CPI, but the issue priced this month offered investors a 275 basis-point spread because of the annual put option that starts at the end of the third year. The bonds are putable at par.

"Basically, we're still experimenting with it," Mr. Rogalski said.

"We're trying to find out what kinds of things are attractive to investors and the best way to do that is by tinkering with the structure a bit."

The put option is attractive to investors because it puts a floor on the price of the bond after three years, he said.

The issue offered this month matures in 15 years, carries an initial coupon of 6.75% and was priced at par. The interest rate is reset quarterly based on the sum of 2.75% plus the change in the CPI.

The issue is backed by enough collateral to get an AAA rating from Moody's Investors Service and Standard & Poor's Corp.

Investors find inflation-linked bonds attractive because the real rate of return exceeds the performance of non-inflation linked instruments, Mr. Rogalski said.

Morgan Stanley research for the period between 1926 and 1986 shows long-term corporate bonds produced an average real return of 2.2% while long-term government bonds produced an average real return of 1.6%.

The Shearson Lehman Government/Corporate Bond index produced an average annual real return of 1.91% between January 1973 and September 1987, according to the report.

Pension fund managers have been major buyers of REALS both because of the guaranteed real rate of return and because the product hedges liabilities that are positively correlated with average hourly wage compensation, Mr. Rogalski said. "In an asset-liability sense, this is the only game in town to hedge these liabilities."

Property and casualty insurance companies have shown an interest in REALS because the product hedges inflation-driven increases in liability costs.

REALS benefit issuers with businesses whose earnings are correlated with the inflation rate, Mr. Rogalski said. For such an issuer, the higher coupon to be paid on the REALS would be offset by the stronger earnings associated with inflation.

# Underwriting

*Continued from page 31*

market share of 12%.

Merrill Lynch's first-place finish marks the first time the firm has held that honor in at least two decades, according to Securities Data Co., New York.

Merrill Lynch moved up sharply in IDD's common stock category, taking third place in the first quarter after finishing eighth in the last quarter of 1987.

The firm moved from No. 3 in the fourth quarter of 1987 to No. 1 in the underwriting of all debt issues. In this category, Merrill held a 16.8% market share compared with Salomon's 16% share.

But the gap in market share is wider if mortgage-related securities are removed from the debt category, a procedure that produces a more accurate measure of corporate finance activity. Measured in this way, Merrill has a 19.4% market share compared with the 12.7% share held by Salomon, a powerhouse in the mortgage-related underwriting business.

Merrill Lynch has been working to boost its debt underwriting volume for the last three or four years, said Edson V. Mitchell, managing director and head of the debt financing division at the firm. The effort involves closer coordination among the firm's investment bankers, traders and sales people, Mr. Mitchell said.

"Our objective is the long-term profitable penetration of the corporate debt market," he said.

Merrill Lynch's intensified effort resulted in several new clients, Mr. Mitchell said, noting the firm made its debut in the first quarter as a lead manager for Westinghouse Electric Corp., Pittsburgh, and Signal Capital Corp., Hampton, N.H.

Other highlights of first-quarter underwriting activity include:

- First Boston Corp. maintained its top-ranked position in the asset-related sector, with a market share of 40%. Salomon Brothers, however, narrowed First Boston's lead, taking a market share of 34%. In the fourth quarter, First Boston garnered 59% compared with Salomon's 13%.
- Drexel Burnham Lambert Inc. boosted its share of the high-yield debt market to 42% from 34% in the previous quarter. But Drexel held a 50% market share in the first quarter of 1987.
- Wheat, First Securities Inc., Richmond, Va., captured first place in the common stock category because of its $2 billion underwriting of an issue for Massachusetts Financial Services Co., Boston. Wheat, First ranked second in common stock in the last quarter of 1987.
- Salomon recaptured its position as the top-ranked underwriter of mortgage-related debt in the first quarter after sinking to fourth in the last quarter of 1987. Goldman, Sachs, which held the top-ranked slot in the fourth quarter of 1987, fell one notch in the first quarter of this year. ■

"We wanted a shop that produced first quartile international fixed income performance for the past three-year period."

"So who'd you choose?"

"Chase Investors' International Shop...obviously!"

# EBRI

*Continued from page 2*

surprised by the findings.

"Among our clients, very few took precipitous action as a result of the crash," said Ernest Bianco, director of U.S. consulting and senior vice president, Frank Russell Co., Tacoma, Wash.

Among the company's 40 large clients, one left the stock market completely, another reduced its allocation from 55% to 30%, one took out $300 million just before the crash and two funds bought stock, Mr. Bianco noted. "But our other 30-odd clients did nothing," he said.

Peter Morris, investment director for the Washington-based National Rural Electric Cooperative Association pension fund, also didn't view EBRI's findings as remarkable. "But I don't know that we'll ever really find out (exactly how much left the stock market), because those who sold probably won't tell anyone."

EBRI also found that private trusteed pension funds lost 10.4% of their value during the final quarter of 1987 — the largest quarterly loss in five years.

Net losses were $135 billion — $152 billion in realized and unrealized losses stemming primarily from stock price declines offset by $17.5 billion in dividend payment and interest income.

Of the $152 billion in total losses for the quarter, a $112 billion drop in the value of the equities and a $44.5 billion drop in other types of investments were offset with capital gains of $4.4 billion in fixed income.

EBRI's research found a net gain for the year, since the fourth-quarter losses were offset by three strong prior quarters. For the year, there were total earnings of 6.6%, or $71 billion — $5 billion from capital gains and $66 billion from dividends and interest income. The study also found that despite the fourth-quarter declines, direct stock holdings showed a positive return of 8.7% for the year.

EBRI also found equity assets directly held by pension funds were $405.2 billion as of Dec. 31, about the same as when they began the year, and had grown to $442 billion by April 11.

When funds report their investment results for 1987, Mr. Salisbury said, "it will be as if Oct. 19 never happened."

"It will look as if it was a good year — not a great year but not a bad year — and the blip will not even show."

Total pension assets at the end of the year were $1.118 trillion, still $38 billion ahead of the 1986 year-end level of $1.08 trillion but down from the record high reached at the end of the third quarter of $2.298 trillion.

The decline in stock values shifted the asset mix of private trusteed pension funds, with stock holdings falling to 36% from 40% of the total. Bonds increased to 17% from 14%. The rest of the change was accounted for by a dip in cash to 9% and a slight increase in other assets to 37%.

# PBGC says law could hurt

By Nicky Robertshaw

WASHINGTON — In its efforts to toughen minimum funding rules for ailing pension plans last year, Congress might have achieved the opposite effect, officials at the Pension Benefit Guaranty Corp. warn.

Healthy plans, however, might find themselves with a different problem: being assessed an excise tax for exceeding newly tightened maximum funding standards.

The problem in both instances relates to the mandated interest rates used in calculating a plan's liabilities. The minimum funding standard in the Pension Protection Act is 100% of current liability; under the full-funding limit in the Omnibus Budget Reconciliation Act of 1987, an employer loses tax deductions on contributions once plan assets exceed 150% of current liability.

Government officials haven't defined what is included in current liability. While most observers agree it would cover the accumulated benefit obligation, the government also might include such items as early retirement and death and disability benefits.

PBGC officials are concerned the congressionally mandated rate could interfere with the Pension Protection Act's intention of boosting underfunded plans.

"What it does is it reduces the valuation of the liability . . . in essence it weakens the funding standards," said PBGC Executive Director Kathleen P. Utgoff. "I don't think people realized just how many plans would be affected by this change in the law."

Generally, whenever the interest rate used to value the funding level goes up one percentage point, the liability goes down 10 percentage points.

Plans near the full-funding limit have a more immediate concern because they might already be on the hook for excise taxes if their quarterly contributions put them over the limit, according to Dave Guftafson, special assistant to the executive director and manager of the actuarial policy division at the PBGC.

Under the 1987 budget law, the interest rate plans must use to calculate current liability is between 90% and 110% of a four-year average of the interest rate of a 30-year Treasury note. The law, however, gives the Treasury Department authority to adjust the range to between 80% and 90% of the four-year average, and to weigh the four-year average toward the most recent interest rate.

Before the law was enacted, a plan could choose any interest rate that was "reasonable in the aggregate."

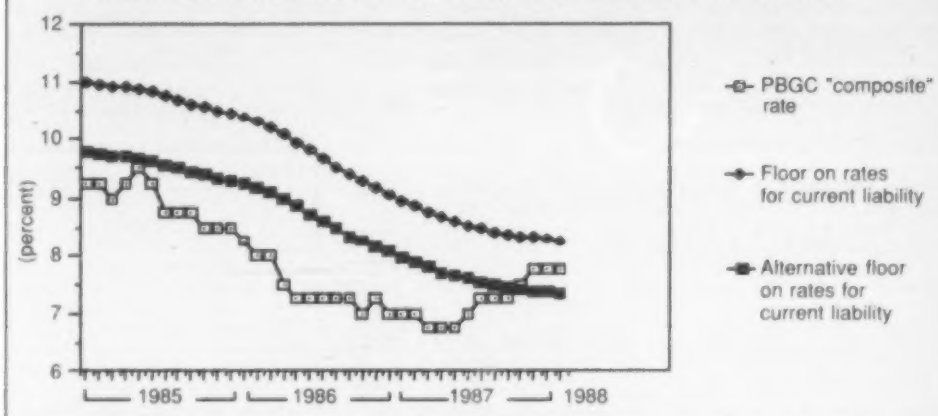
Under the mandated interest rate, "plans are faced not only with this corridor rate that is significantly higher than what they've been using, but it's also volatile," Mr. Guftafson said.

In practice, the new rate appears higher than those used in the past. For example, the average interest rate used to determine funding limits in 1987 was 7.8% for plans with 1,000 or more participants, according to a Wyatt Co. survey of actuarial assumptions and funding, compared with the Internal Revenue Service's rate, calculated as of Jan. 1 under the new law, of 9.12% and a range of 8.25% to 10.05%.

The IRS' first priority will be to issue a notice on how to calculate this interest rate, said James E. Holland, branch chief-pension actuarial branch of the employee plans and exempt organizations area of the IRS, in a speech earlier this year. The agency also is giving priority to defining just what current liability includes.

The problem of the interest rate stems in part from the full-funding provisions being done separately from the Pension Protection Act as a way to address deficit concerns rather than to reform pension funding, Mr. Guftafson said. ■

**Interest rates used to calculate current liabilities***



*These rates are intended to represent what might have been in effect if the Omnibus Budget Reconciliation Act of 1987 had been in place for past years. Pending further guidance from the IRS and PBGC, this should be considered a tentative guide

# Costs climb

*Continued from page 1*
period of Oct. 15 to Oct. 21, 31 plan sponsors in its data base assigned 60.7% of their trades to so-called capital brokers (those willing to commit their capital to facilitate trades), 30.9% to research-oriented brokers and 8.4% to brokers that handle soft-dollar payments. During Oct. 15 to Oct. 21, SEI found slight shifts in trades — one percentage point — to capital and research-oriented brokers from soft-dollar brokers.

Data for other periods weren't available.

The study concluded institutions rely less on soft-dollar brokers during demanding periods.

"Execution costs by our measure did go up in the two months after the crash on the order of 1 penny to 1.5 pennies," said Gilbert Beebower, executive vice president, SEI.

According to another SEI study, the median commission paid by 35 pension sponsors for listed stocks fell slightly in the fourth quarter to about 6.2 cents a share from 6.9 cents for the entire year.

And an SEI study of 31 large money managers found commissions averaged 6.3 cents in the last half of 1987. But in November and December alone, the average dropped to 6.1 cents.

"Market impact is much more important than commission cost," noted Theodore R. Aronson, partner at Aronson & Fogler, Philadelphia, which runs $150 million.

At Disciplined Investment Advisors Inc., Evanston, Ill., which manages $500 million, Daniel J. Schweihs, principal, said, "We're having more brokers interested in doing business at 2 to 4 cents a share than were interested before the crash."

He said execution costs are unchanged even in today's less liquid market. He said smaller managers are less affected by the lower liquidity because they can be more nimble than larger managers.

As a result, he expects smaller managers to have better performance than larger ones during the first half.

Goldman, Sachs' Mr. Earle explained principal trading costs are higher because "volatility in the market is less certain. It's very unpredictable; the potential for risk is higher."

But he said Goldman agency transaction rates "have remained the same. I don't think we were at the low end to begin with. We were in the middle or high end."

First Boston's Mr. Mendez added, "A customer has to be more willing to pay more in commissions to get a trade done."

He said he hasn't noticed customers fleeing because trades requiring capital cost more.

Richard M. Crooks Jr., Allen's managing director, said, "There is a reluctance of dealers to commit capital because they all got burnt so badly in October and are shy about committing capital now. You have to pay a higher price to buy or take a lower price to sell." Allen does mainly principal trades, he said.

Aronson & Fogler's Mr. Aronson said the firm saw a rough doubling of bid/ask spreads after the crash. The spread had been a quarter of a point and it went almost as high as a half. Spreads have subsequently narrowed, he added, although they still are above precrash levels.

He said his firm has increased its use of the off-market crossing networks to 20% from less than 5% a year ago. ■

# Funding limit

*Continued from page 1*
are not going unnoticed, government officials and plan sponsors are equally concerned about what a solution for these companies might do to other, older plans.

The Internal Revenue Service has said it might increase the limit for companies hardest hit, but this could aggravate problems for more mature pension plans, whose full-funding limit would then be lowered to compensate for any tax dollars lost from the younger plans.

Adjusting the full-funding limits also could interfere with the intentions of the Pension Protection Act's minimum funding standards, enacted to help increase the funding of older, underfunded plans. In effect, pension sponsors now must try to manage their plans within a relatively narrow corridor.

"I think it needs careful study," said Kathleen P. Utgoff, PBGC executive director, who stressed the PBGC did not support the 150% full-funding measure. "It's not clear that there is a real problem, but we are definitely worried about it."

While altering the full-funding limit might help plans with young work forces, any adjustment would have to be balanced with a lower full-funding limit for the mature, problem plans, she said. "So cutting (the mature plans) close to the edge — if it really does cut them close to the edge — could cause us a problem."

The ERISA Industry Committee is polling its members about the effect of the measure and has been asked to share those results with the Treasury Department.

While companies can't go above 150% of current liability without penalty, they must be funded at 100% of current liability to meet the minimum funding standards under the Pension Protection Act. This means from year to year, the funding level must remain within this relatively narrow corridor, something plan sponsors and their advisers fear will be difficult given the volatility both of the interest rate used to value the assets and potential further volatility of the market.

Complicating the picture is a phenomenon that was not anticipated when the Budget Reconciliation Act was being finalized: The interest rates to be used to figure the current liability are higher than what companies have been using in the past few years, and unless modified, could dramatically affect the value of a plan's liabilities (*See story on page 51*).

The full-funding limitation was included in the budget bill as a way to generate $2.4 billion toward helping to trim the deficit, and both the Treasury Department and the tax committees in the House and Senate are seen as unlikely to change this.

"Digital has a real problem, but I don't think other companies are going to be willing to take a hit on their funding ability" to help ease the company's woes, said Mark J. Ugoretz, ERISA Industry Committee executive director. Calling the enactment of the full-funding limit for revenue-raising purposes "an obnoxious reason to manipulate the pension system," Mr. Ugoretz said: "The answer is not the adjustment of the 150% limit but rather its elimination, so we can go back to having some assurances that when retirees retire, the money will be there."

Also critical of the full-funding limit was Christopher Bone, consulting actuary of Actuarial Services Associates, Piscataway, N.J., a division of American Telephone & Telegraph Co.: "The main problem is that you've got a conflict between pension policy and tax policy. From our viewpoint, the full-funding limit was bad pension policy. It's tied to an interest rate that's too volatile, and it does not follow the assets as they go up and down."

The Treasury Department has a deadline of Aug. 15 to complete a study of the effect of the full-funding limit as well as to issue regulations. Those would include specifying how actuaries would figure the interest rate for current liability and defining what current liability encompasses. ■

# ERISA exemptions proposed

**By Brad Rudin**

The Department of Labor might soon lift some restrictions on pension plan investments in several kinds of asset-backed securities.

The proposed exemptions to the Employee Retirement Income Security Act, which could be formally proposed as early as next month, would free some entities involved in the administration of pass-through trusts from what the department regards as restrictions governing the relationship between a corporate pension plan and various parties-in-interest.

The proposal, however, does not incorporate several changes requested by First Boston Corp. and Salomon Brothers Inc., Wall Street's biggest underwriters of asset-backed securities.

For example, securities backed by lease receivables and to unsecured instruments wouldn't be exempt.

In addition, while the proposed exemption applies to the entities that service and operate pass-through trusts, it does not apply to providers of credit support. The Labor Department's concern here is that a conflict of interest might exist if the servicer of the trust is affiliated with the provider of credit support. (An asset pass-through trust is the entity through which pass-through asset-backed securities are sold.)

Diana H. Strickler, a vice president in the asset finance unit at First Boston, said the firm's counsel plans to respond in writing to the Labor Department proposal. Salomon officials did not respond to a request for comment.

Individual exemptions for securities backed by secured consumer receivables, secured commercial receivables, automobile receivables and single-family, multifamily and commercial mortgages soon could be published in the Federal Register. The exemptions also would cover guaranteed governmental mortgage pool certificates.

The Labor Department outlined its proposals in file memorandums regarding separate telephone conversations in late March with the legal representatives of First Boston and Salomon.

Among the specific concerns First Boston and Salomon executives cited in their applications were:

- ERISA violations could result if the sponsor or trustee of an asset pass-through trust has a pre-existing party-in-interest relationship with a pension plan.
- If the sponsor or trustee were considered a fiduciary of the pension plan, sale of the certificates could be barred by ERISA provisions that prohibit a fiduciary from dealing with plan assets in its own interest.
- Prohibited transactions could also occur if the underlying assets of a trust were considered "plan assets" of the pension plan. ■

Investment Age

Best managed companies

Merck & Co. is No. 1 in the minds of money managers.

# Managers rate Merck best in U.S.

Merck & Co., General Electric Co., Wal-Mart Stores Inc., McDonald's Corp. and Digital Equipment Corp. are the best-managed U.S. companies, a *Pensions & Investment Age* survey of institutional money managers concludes.

Other companies garnering less, but still significant, recognition are The Dow Chemical Co., Borden Inc., Ford Motor Co., IBM Corp., H.J. Heinz Co., Philip Morris Cos. Inc., Sara Lee Corp., Minnesota Mining and Manufacturing Co., Hewlett-Packard Co., Gannett Co., Sun Microsystems Inc., Abbott Laboratories and Cray Research.

**Merck**, which took top honors in the *P&I Age* straw poll, also has been acclaimed as a superior company in surveys sponsored by other business publications.

"We're impressed by their research effort and the successful new products they've developed, which provide good earnings visibility," said Hilton Hemphill, president of MSecurities Corp., Dallas, the

# Buybacks hoist stocks' returns

By Brad Rudin

NEW YORK — Companies that repurchased their stock following buyback announcements delivered returns that handily beat the market, data produced for *Pensions & Investment Age* by Salomon Brothers Inc. show.

But companies that made announcements without buying back the stock posted returns that varied little from the market.

The impact of buyback announcements on stock prices is noteworthy because many companies used this approach in an effort to prop up the price of their shares after last year's stock market plunge.

Among the findings:

- A universe of 100 companies with known progress in completing a buyback program produced an equal-weighted return of 19.03% and a price-weighted return of 23.79%.
- A universe of 100 companies that made no known progress on announced buybacks produced a 15.94% equal-weighted return and a 14.08% price-weighted return between Oct. 19 and April 14. The Standard & Poor's 500 stock index, which is market weighted, delivered a 15.53% return in that same period.
- The companies with the 100 largest buyback announcements in terms of dollars since Oct. 19 — regardless of whether they followed with actual buybacks — produced an equal-weighted return of 14.66% and a price-weighted return of 17.71% through April 14.

Stock buybacks hold the promise of better earnings per share and of higher prices, so investors typically are encouraged.

"If we owned it and they announced a buyback, we'd be more likely to hold on to it than we would before," said Stephen B. Timbers, chief investment officer at Kemper Financial Services Inc., Chicago.

Only about 10% of the stock buyback announcements made in 1987 and the first quarter of 1988 were followed by actual purchases, the data showed. (Because some announcements were made recently, the data could overstate the extent to which companies are ignoring their stock repurchase announcements.)

The Salomon data, and a separate study by Georgeson & Co. Inc., New York, suggest announcements alone did not make these companies perform better than the market.

"Subsequent announcements — as the message strikes home that somebody is speaking with a forked tongue — are going to have a diminishing impact," said Eric T. Miller, chief investment officer at Donaldson, Lufkin & Jenrette Securities Corp., New York.

"You have to put your money where your mouth is to get your bang for the buck," said Jamison G. Graf, vice president and equity manager at One Federal Asset Management Inc., Boston.

The strong showing for companies that actually bought back stock encouraged some money managers.

"I've been a big supporter of buybacks, so I'm pleased as punch that the results support the position that buybacks are favorable," said

# Walton starts financial firm

By Fred Williams

BENTONVILLE, Ark. — Sam Walton, who became one of the nation's richest men through his chain of Wal-Mart discount department stores, is turning his company's resources to financial services, *Pensions & Investment Age* has learned.

Walton Enterprises Inc. will start a yet-unnamed subsidiary that will focus on public and corporate finance, fixed-income trading and sales and management of separate fixed-income portfolios for banks and employee benefit funds, according to Shack Cashen, chief investment officer of the new firm.

Alice Walton, Mr. Walton's daughter, will be president.

Mr. Cashen said the impetus came from Ms. Walton. Her father "is aware of all this, he knows all the plans and has approved the plans," but won't be directly involved in managing or overseeing the new firm.

Ms. Walton is vice chairman, primary investment officer and a board member of Northwest Arkansas Bankshares, a group of banks owned by Walton Enterprises.

Mr. Cashen joined Walton Enterprises — parent company of Wal-Mart Stores Inc. — seven months ago as chief investment officer of First National Bank Bentonville, whose parent company is Northwest Arkansas Bankshares. He previously worked with Texas billionaire H. Ross Perot.

The move caught financial analysts and investment specialists by surprise; only one analyst contacted had heard of the plan, and then only in general terms.

"This is the first I have heard of it; it may be something he's (Sam Walton) doing on the side . . . It is a different ball game for them all together," said Wayne Hood, retail analyst at Prudential-

## LATE NEWS

### Competition for Citicorp narrows

NEW YORK — The bidding contest for Citicorp's money management unit has narrowed to USF&G Corp., Baltimore, and Kemper Financial Services Inc., Chicago, sources said.

The price of the unit, however, has declined to the mid-$90 million range from earlier reports of non-binding bids of $100 million to $110 million, the sources said. The drop reflects that the current bids are binding, market factors and closer looks at the unit's business, they said.

Citicorp officials declined to comment on the sale.

A USF&G spokeswoman confirmed the insurance company is still in the running for Citicorp Investment Management Inc., which manages more than $20 billion in domestic discretionary assets. Kemper officials declined to comment.

### Director leaving Boise Cascade

BOISE, Idaho — David R. Norris, director of retirement funds overseeing about $925 million in employee benefit assets at Boise Cascade Corp., is resigning to join SEI Corp.

Mr. Norris, who will hold the newly created position of vice president-plan fiduciary, will join SEI's Chicago office effective May 31. He could not be reached for comment.

### Munder becomes independent

BIRMINGHAM, Mich. — The principals of Munder Capital Management Inc. have bought out Security Pacific Investment Group Inc.'s interest in their firm for an undisclosed amount.

Security Pacific, Los Angeles, held a minority share of Munder Capital Management, said Lee P. Munder, president, with the majority held by himself and three associates. Neither Mr. Munder nor a Security Pacific spokeswoman would state the exact amount held by each party.

Mr. Munder and Security Pacific started Munder Capital Management in mid-1985. The firm has grown to nearly $1 billion in assets under management. About 80% is tax-exempt, Mr. Munder said.

He said the principals bought out Security Pacific because they wanted full ownership and control of the firm. Security Pacific realized a significant return on its investment, he added. Neither he nor Security Pacific would state the purchase price or Security Pacific's gain.

### Fund launched by TIAA-CREF

NEW YORK — The Teachers Insurance and Annuity Association — College Retirement Equities Fund has approved a group annuity product that would allow participants — for the first time — to move accumulated retirement assets from the fixed-income portion into other investment options, including those outside the TIAA-CREF universe if approved by the sponsoring college or university.

The product, which will be tied in with the previously announced money-market annuity option, is required by the Securities and Exchange Commission as a condition to its granting TIAA-CREF certain exemptions in connection with registering CREF as an investment company under federal law.

Under the proposal, which must be approved by the appropriate regulatory agencies, participants could move 10% of their assets into CREF each year for 10 years, said Peter C. Clapman, senior vice president and association general counsel for the TIAA-CREF.

Once in CREF, assets could be transferred among the equity fund, money-market fund, the group annuity fund - all under the CREF umbrella — or back into the fixed-income fund.

### FASB delays draft for 2nd time

STAMFORD, Conn. — The Financial Accounting Standards Board has pushed back the release date for its exposure draft on accounting for post-retirement health benefits until the third quarter of 1988. The draft's release, originally scheduled for the first quarter, previously was postponed until the second quarter.

The FASB expects to issue its final statement on accounting for post retirement medical benefits in 1989, as scheduled, according to Michael Merlob, consultant with William M. Mercer-Meidinger-Hansen Inc., Stamford.

Mr. Merlob said recent personnel changes on the FASB as well as a re-evaluation of cost and funding methods for post retirement benefits lead to the delay.

### Philadelphia pension post filled

PHILADELPHIA — John Fuller, deputy director of finance for the city of Philadelphia, has been appointed to the additional post of pension manager for the city's $1.5 billion municipal retirement system. He had been acting pension manager since August.

# Post-crash tactics

## Funds flood allocation managers with calls

By Carol Wiley

Five tactical asset allocation managers have added a total of 35 pension fund clients and handled hundreds of inquiries about the strategy in the six months since Oct. 19.

Pension fund executives are showing increasing interest in active asset allocation strategies as they seek ways to reduce market volatility and cope with the effects of FASB 87.

Those who have signed onto the programs in the past six months also report added value and reduced manager fees with tactical asset allocation.

In addition, the managers said, both sides of the industry now acknowledge what asset allocators have been claiming for some time: 80% to 95% of investment performance is achieved through asset allocation; the remainder, through security selection.

Tactical asset allocation comprises several investment strategies, making short-term switches among asset classes in an attempt to add value in varying market conditions. The shifts are achieved through the use of futures or index funds. Risk measurement is quantitative and disciplined.

Tactical asset allocation "will be the most dominant (investment) style in tax-exempt business in the next three years, no doubt about it," said Bruce Poliquin, vice president and principal of Avatar Associates, New York.

The firm has signed on more than 12 clients in the past six months, including Springs Industries Inc., Fort Mill, S.C.; Levi Strauss & Co., San Francisco; Kroger Co., Cincinnati; Occidental Petroleum Corp., Los Angeles; and National Starch & Chemical Corp., Bridgewater, N.J.

To say business has picked up since the crash "is an understatement," Mr. Poliquin said.

TSA Capital Management, Los Angeles, which manages $3 billion in its tactical asset allocation program, has added six clients since Oct. 19, an average number, according to Roger Clarke, managing director and chief investment officer.

Potential clients, however, make up "a fairly long list," he added. "There's a lot of interest, but people are still very cautious. They're still licking their wounds from Oct. 19."

Bankers Trust Co. — Investment Management Group, New York, has formalized its tactical asset allocation strategy and has one pension client that has invested $50 million. In the two days following the announcement of the product, Vice President Steven A. Lauer said he received six phone calls, compared with "maybe three or four inquiries" all of last year.

He will be making nine presentations on the product in the next two to three weeks.

At a recent conference sponsored by The Northern Trust Co., Chicago, for its master trust clients, there was standing-room only in the session on tactical asset allocation. Northern Trust offers a tactical asset allocation product, designed by Ibbotson Associates, Chicago. Interest in Northern Trust's offering has "quadrupled," and the trust company is negotiating with two potential clients, according to Marvin Waring and Laurence B. Siegel, managing directors of Ibbotson Associates.

Matrix Capital Management, Greenwich, Conn., reports four new clients since the crash — including J.C. Penney Co., New York — bringing total tax-exempt assets in its program to $170 million.

"There has been a tremendous increase in interest" since Oct. 19, said Lynn Edelman, Matrix vice

## 3 resolutions on 'pills' lose; sponsors see stronger vote

By Marcia Parker

Corporations defeated the first of this year's crop of anti-poison pill resolutions sponsored by institutional investors, but the resolutions seem to have generated stronger support than last year.

The resolutions generally asked corporations to seek shareholder approval for poison pills.

The strong showing has given institutional investors a boost at the start of the proxy season. Corporate governance experts agree shareholder support for these early anti-poison pill proposals is significant, although they warn it is too early to draw any conclusions about the rest of the season.

Stockholders at United Technologies Corp., Allied-Signal Inc. and Consolidated Freightways Inc. voted down the first of more than 20 anti-poison pill resolutions on tap for various companies. The State of Wisconsin Investment Board sponsored the resolutions at United Technologies, which was 54% owned by institutions as of March 31, and Allied-Signal, which was 50% owned by institutions as of March 31.

The California Public Employees' Retirement System sponsored the resolution at Consolidated Freightways, 76% institutionally owned March 31.

So far, the votes in favor of the anti-poison pill resolution ranged from a low of 32% to a high of 45%, not counting abstentions. Counting abstentions, the vote ranged from 28.8% to 42.4%. Last year, the early votes supporting anti-poison pill resolutions were lower.

"Obviously the votes are holding up and are comparable or better than the early votes on poison pills during last year's proxy season," said Peg O'Hara, who tracks corporate governance issues at the Investor Responsibility Research Center, Washington.

"These are three very strong votes. It shows strong support, although it is too early to tell across the board how all of these resolutions will do during this year's season."

Meantime, the Securities and Exchange Commission derailed efforts by International Paper Co., Dayton-Hudson Corp. and Upjohn Co. to keep anti-poison pill resolutions sponsored by institutional investors off their 1988 proxy statements.

**Institutional investors are sticking with regional bank stocks such as First Fidelity Bancorporation, Newark, N.J.**

## Institutions overweight bank stocks

By Curtis Vosti

Despite problems with Texas regional banks and nagging loan troubles in banks across the country, institutional investors remain bullish — if cautiously so — on bank investments.

While institutional weighting of bank stocks has dipped slightly, to 4.4% as of March 31 from 4.7% a year earlier, it still is heavier than the Standard & Poor's 500 stock index's 2.1% weighting as of March 31, ac-

# Weighing the options

## Market-weight indexes open to 1-country domination

By David A. Umstead

The growing dominance of Japanese equities in a typical international stock index fund presents investors with a dilemma of concentrating more than half of their portfolio in one country.

This situation, the result of constructing portfolios based on market-value weight, leads one to look for other designs that would preserve the benefits of such weighting within each national market, while also providing a more diversified distribution of capital across countries.

It is important to understand the reason the market-value weighting is used for indexation. This approach is attractive to index fund managers and shouldn't be abandoned casually. Under it, each security in the portfolio is weighed in proportion to the market value of its total shares outstanding.

Of course, passive investors typically deviate from market weightings in the asset allocation decision. Passive investors, who index all their equities and all their bonds, think nothing of using a mix of the two that is not market weighted. Similarly, investors who index all their domestic equities think nothing of setting their allocation to international equity indexes at a far lower weight than a market weight would dictate.

Even a purely passive investor may want to select a mixture of individual country index funds weighted in some fashion other than market-value weights. The bulk of trading volume in each of the equity markets of the world is still primarily domestic. This suggests the international equity markets are not yet one market. Price movements in each market are still predominantly the result of local events.

Certainly, the market valuation mechanism is far different in West Germany than it is in Japan. For instance, the average price-earnings ratio, using earnings for the 12 months ended March 31, is much lower in Germany, 11.7%, than in Japan, 61.3%.

These idiosyncrasies, which are the very cause of the diversification benefits being sought, are also a reason maintenance of market weightings across countries might not guarantee performing above the average of all international investors.

In place of market-value weight, investors might consider weighting by gross domestic product as a logical alternative. The GDP is an objective measure of the size of each economy; it is not subject to local differences in valuation; and it is more stable over time than market value weights. As a result, it offers a more diversified and uniform distribution of capital around the world.

Table 1 provides a current comparison of GDP- and market capitalization-based allocations for portfolios encompassing the major equity markets of Europe and the Pacific Basin.

The market value-weighted Morgan Stanley Capital International EAFE index shows the weighting favors the two countries with the most highly developed financial markets. Japan and the United Kingdom are given greater weight than the size of their economies would warrant.

On the other hand, a market such as Germany with its enormous economy is underrepresented partly because most of it equity capital has been raised privately.

Smaller, emerging markets such as Spain and Italy are underrepresented partly because of a combination of government ownership and a general lack of sophisticated equity markets.

During the past 18 years, for which data on the EAFE index is readily available, a GDP-weighted version of the index is more uniformly distributed by country and considerably more stable than the market value-weighted index. The market value-weighted portfolio has become more concentrated over time.

Japan began 1970 at 14% of the capitalization-weighted portfolio. By the beginning of 1987, its weight had climbed to more than 50%, and it now exceeds 60%. In the GDP-weighted portfolio, Japan began 1970 at 21%; it currently accounts for just more than 30%.

Another type of international index, one composed of the 50 largest capitalization-weighted non-North American stocks, again illustrates the extreme Japanese concentration from a market value-weighted approach. Of the top 50, only 10 are not Japanese: six stocks in the United Kingdom; two in West Germany; and one each in Italy and the Netherlands.

Contrast this with the top 50

# Study shows topping S&P difficult

NEWPORT BEACH, Calif. — Beating the Standard & Poor's 500 stock index return by at least 400 basis points is an attainable but difficult goal, according to an investment consultant.

In the 10-year period ended Dec. 31, only 11% of equity mutual funds sampled recorded a compound annual return of more than 400 basis points over the S&P 500, said Budge Collins, president of Collins Associates, in a study.

By contrast, 45% of mutual funds beat the S&P index alone in the same period.

Mr. Collins generated the comparisons using the mutual fund data base of CDA Investment Technologies Inc., Silver Spring, Md. For the 10-year period, the data represented 250 mutual funds, $140 billion in assets.

The study shows 1987 was the best year since 1983, with a greater share of mutual funds beating both the S&P itself and the S&P plus 400 goal.

On an annual basis, for years ended Dec. 31, the study found that in:

- 1987, 13% of mutual funds beat the S&P 500 by 400 basis points, while 25% of them beat the S&P 500 alone;
- 1986, 9% and 23%;
- 1985, 11% and 24%;
- 1984, 8% and 18%;
- 1983, 21% and 38%;
- 1982, 45% and 60%;
- 1981, 46% and 62%;
- 1980, 35% and 49%;
- 1979, 68% and 80%; and
- 1978, 49% and 74%.

"For the recent past it's been extremely hard for active managers to beat the S&P 500," said Loretta Morris, a Collins researcher.

For the three-year period ended Dec. 31, 1987, only 3% of the mutual funds beat the S&P 500 by 400 basis points, while 14% beat the S&P 500 alone.

For the five-year period ended Dec. 31, no mutual fund beat the S&P 500 by 400 basis points, while only 11% beat the benchmark index. ■

**YOU'RE LOOKING AT ONE OF THE REASONS OTHER ENERGY COMPANIES WISH THEY WERE QUESTAR.**

We're in the energy business from top to bottom.

From our headquarters in Salt Lake City, Utah, we engage in oil and gas exploration and production, interstate transmission and storage, and retail distribution of natural gas in one of the country's fastest-growing regions. Our operations in each area of the company make a significant contribution to Questar's bottom line—which results in greater economic stability.

That diversity is what other energy companies are trying to achieve. We've been there for a long time now.

It's paid off.

Our shareholders have received 173 consecutive dividends; we've increased those dividends 15 times in the last 15 years; and our performance compares favorably with other companies in the energy industry.

# Mutual fund growth to slow

## Healthy cash flow to spur industry consolidation

The mutual fund industry is likely to enter a period of slower growth, although the changing nature of the industry could mean it is more likely to thrive during adverse economic swings, according to a new study.

The study, "The Mutual Fund Industry: After the Crash," conducted by Sanford C. Bernstein & Co. Inc., New York, also predicts industry consolidation is likely because of "substantial excess cash flow" during the next five years, even assuming slower growth rates.

The study forecasts industry assets will grow between 9% and 11% annually in 1988 and 1989. Although down from the 24% growth rate in 1987, the expected rate is much higher than the 2% growth experienced between 1974 and 1978.

Long-term full cycle industry growth should average between 15% and 18%.

"We believe the industry has fundamentally changed in the past decade, becoming a much more broadly based household savings vehicle," Bernstein reports.

The industry's expected growth should be fueled by a spurt — to 75% of total investments from 30% — in short- to intermediate-term fixed-income funds, the study predicts.

In light of the October crash, market uncertainties should feed households' penchant for substantially shortening maturities, according to the report.

Money market and other short-term fixed-income funds have been growing at a rate three times the growth of bank and thrift consumer deposits in the past four years, Bernstein reports.

"In fact, since the equity market crash in October, short-term mutual funds have increased by $33 billion, or 11%, while bank and thrift consumer accounts and (certificates of deposit) have grown by only $18 billion, or 1%," the study says.

This expected change in investment strategies will "marginally" reduce average management fees, but will "dramatically" reduce the pool of available incentive loads to brokers and to support marketing spending.

The study also predicts industry profit margins will decline 20% to 25% over the next several years.

Other changes predicted in light of the October crash include:

- Some form of Glass-Steagall reform, including an allowance for bank underwriting and sale of mutual funds;
- interest rates will be "quite volatile" in 1988;
- individual company earnings performance will depend on product mix, reputation and mode of distribution. ■

## Index

*Continued from page 13*

holdings in an international index, GDP-weighted by country and capitalization-weighted within each market. This list has only 19 stocks in Japan. Eleven stocks are in Germany, six in France, five in Italy, three in Spain, two in the Netherlands, two in the United Kingdom, and one each in Australia and Austria. There can be no doubt which portfolio offers better diversification.

No one is interested in improved diversification if it can be achieved only at great cost. Japan through the years has had an extraordinarily growing equity market. Those investors who believe this success will continue are reluctant to cut their Japanese holdings. They might be surprised and comforted to know they could have reduced their Japanese exposure, using properly designed GDP-weighted strategy, and still outperformed a capitalization-weighted strategy in the past 18 years.

A GDP-weighted strategy requires more management than a market-weighted strategy. One of the most attractive aspects of a capitalization-weighted international index fund is that very little rebalancing is required. In fact, if stocks paid no dividends and there were no new issues, mergers or acquisitions, a "plain vanilla" international index fund would be "buy and hold" forever. There would be absolutely no trading costs beyond the initial investment.

A GDP-weighted strategy requires periodic rebalancing. Performance differentials between markets cause significant drift from the relatively static GDF weights. While the need for trading is a disadvantage because of transaction costs, it does build a systematic buy-low, sell-high feature into the strategy. Capital invested in countries that perform above average must be periodically reallocated into those countries that have underperformed.

Simulations for the past 18 years reveal long-term results are somewhat sensitive to the rebalancing technique.

Table 2 shows the year-by-year results of a GDP-weighted strategies compared to a capitalization-weighted strategy applied to the EAFE index. While it is obvious that in any given year, results in the two strategies can be quite different, the GDP-weighted strategy, net of estimated rebalancing costs, slightly outperformed the capitalization-weighted strategy by an average of 30 basis points a year.

A GDP-weighted international index fund is a logical next step in the evolution of international indexing. It is an attractive alternative for the investor who wants to maintain a passive approach to international investing, but is concerned with the increasing Japanese concentration of the standard approach.

A GDP-weighted strategy is more uniformly distributed around the world, offering improved diversification. It provides a systematic asset allocation scheme that historically has been an excellent performer, in spite of its relatively modest exposure to Japan. It is particularly timely for those worried that the Japanese market is overvalued.

INTERNATIONAL

# Index fund returns not exact match

By Marlene Givant

In international investing, comparing the performance of passive stock managers is almost as interesting as comparing active returns.

The complexities and expense of international stock indexing have led managers to use various sampling methods, which in turn have led to wide differences in performance among funds tracking the Morgan Stanley Capital International Europe Australia Far East index.

For example, Wells Fargo Investment Advisors' EAFE pooled fund returned 27.3% last year, compared with the EAFE's 25.2% and Chase Investors Management Corp.'s EAFE index fund's 24.3%.

Officials at San Francisco-based Wells Fargo said the performance difference is attributable to the fund's including only nine EAFE countries; the return is closer to that of a nine-country benchmark. The firm since has added six markets to its index because it hired Morgan Stanley Trust Co., New York, as its global custodian, assuaging concerns about settlement and capital repatriation in some markets. EAFE covers 18 countries and about 975 stocks.

Chase's fund experiences tracking error because it includes only 520 EAFE stocks, according to Charles Massare, vice president of the New York firm.

What's wrong with passive managers outperforming the EAFE — especially when few active managers have?

"On the premise that tracking error is a negative, positive tracking error ought to be as concerning to you as negative tracking error," said Nicholas Lopardo, chief investment officer of State Street Bank and Trust Co., Boston.

Indeed, pension executives say they pay careful attention to tracking error in evaluating indexers in international searches.

When the $540 million CIBA-GEIGY Corp. pension fund started international indexing three years ago, "We had viewed indexing as a quick, cost-effective way of becoming involved in international," said William J. McHugh Jr., director of trust funds for the Ardsley, N.Y.-based company.

"We were cognizant of the fact you can have a tracking error. State Street had a good record of closely following the index. (It followed) nine of the 17 markets (in EAFE) at that time so it was especially amazing they could do so well," he said.

CIBA-GEIGY invests $15 million in State Street's commingled fund.

Tracking error results from ranges in the assets in an index fund, the degree of replication and the number of countries and stocks included. Even the exchange rates and times used to calculate returns cause short-term gaps.

The Public Employees Retirement System of Nevada invests $65 million with Axe Core Investors, Tarrytown, N.Y., in a fund that tracks the EAFE using American depository receipts, which are receipts for shares of a foreign corporation that are traded in the United States.

"One of the reasons for tracking error in our portfolio is because . . . there aren't ADRs for that whole (EAFE) index. It's a stratified sample to replicate the index. You would expect some tracking error," said Laura Wallace, investment officer of the $2.5 billion Nevada fund.

All the major indexers agree the longer the time horizon, the lower the tracking error.

State Street and American National Bank & Trust Co. of Chicago, the oldest international indexers, started within a few months of one another in 1979. For the nine years ended Dec. 31, State Street's fund returned a compound annualized 21.1% vs. the EAFE's 21.6%. American National, which did not report for the full year of 1979, returned an annualized 22.9% for the eight years ended Dec. 31, vs. the EAFE's 23.6%.

The index's returns were obtained from the Pensions & Investments' Performance Evaluation Report.

State Street overshadows its competitors in terms of international assets for U.S. tax-exempt clients. It runs $4 billion in passive international accounts — $2.5 billion in passive separate accounts and $1.5 billion in a commingled index fund. American National runs $220 million, all in an EAFE index commingled fund.

Wells Fargo manages $800 million in EAFE commingled funds and Chase Investors runs $370 million overseas, including a $50.4 million commingled fund.

Both firms have been international indexers for almost seven years.

While a sizable tracking error

# U.S. investors might export small-cap boom

By Joel Chernoff

International small-cap portfolios might emerge as a hot area in the next few years, as U.S. institutional investors delve deeper into international equities.

So far, there has been only a trickle into small-capitalization accounts, but some managers are unveiling products that promise additional diversification and higher returns with what some claim is actually lower risk.

"I think it will be a growing area, but it is still a real niche play," said Lawrence Davanzo, senior vice president at Wilshire Associates, Santa Monica, Calif.

"For funds large enough to consider diversification outside of the U.S. by types of equity investment, small-cap should be considered," said Carol Proffer, principal at William M. Mercer-Meidinger-Hansen Inc., Dallas.

The domestic rally in small-cap stocks also might boost pension executives' interest. The $2.7 billion Fire & Police Pension System — City of Los Angeles, which just hired six domestic small-cap managers to run $192 million, might consider hiring a small-cap manager in its upcoming search for international managers, said Allan Moore, assistant manager.

*Continued on page 19*

# Privatization puzzle

## Speculation tax may cool funds' ardor

By Nick Ryan

Fears of stricter interpretations of tax laws might cause British pension funds to shun privatizations of government-owned companies — including a pending $40 billion selloff of the electricity industry.

The concerns stem from recent efforts by the Inland Revenue — the U.K. equivalent of the Internal Revenue Service — to tax "speculative" investments made by tax-exempt investors.

These include profits gained from subunderwriting — where institutions guarantee to take any unsubscribed shares in return for a slice of the underwriting premium.

Also affected is a wide array of investments, including some involving derivative instruments, program trading, short-term bond strategies, gold and commodities.

Fears of taxation could set back the British government's continuing efforts to privatize various industries.

The electricity industry privatization, involving both generators of power and distributors of energy and electrical appliances, is expected to occur late this year or early next year.

Pension fund managers, many of whom are nursing their losses from subunderwriting British Petroleum last fall, increasingly feel that if profits from such sales are taxed, the exercise might not be worthwhile.

In the United Kingdom, investment banks traditionally share the risk with subunderwriters. With British Petroleum, underwriters got stuck with virtually the entire $12.6 billion issue, at a penalty of 90 cents per share.

The National Association of Pension Funds is pursuing the taxation issue, which it sees as having serious implications for London as a center for raising capital and for the tax status of pension funds, which have been participating in underwritings for years.

"The result of the BP share issue should remind (Inland) Rev-

*Continued from page 17*

enue that the subunderwriting activities of pension funds do not always lead to a profitable return and taxation may result in funds turning away from this useful and important activity," said John McLachlan, outgoing chairman of the NAPF Investment Committee.

"If (subunderwriting) is taxed, some funds may wonder whether it's worth the management time," added David Prosser, investment director of Legal & General Assurance Society Ltd., a major insurance company with $40 billion in assets under management.

The Inland Revenue has set up a special office to investigate alleged "trading" activities by pension funds.

These short-term, speculative activities are distinct from longer-term "investments," but the law does not clearly define the differences between the two.

Much of the office's early investigation has centered on subunderwriting activity, but the current focus has been on other investments that might be regarded as speculative.

The special office is believed to be investigating about 10 plans; at least one, reported to have been dealing extensively in gold bullion, has been assessed for tax.

Other areas believed to be under investigation are:

- "soft" commodities. For example, a plan sponsor whose business is in the food industry might be tempted to use its in-house expertise and take a position in, say, cocoa futures.
- "bond washing." This involves active trading, particularly in short government bonds, just before and after a coupon date. Under this scenario, a pension fund would sell a bond to a taxable investor after the ex-dividend date but before the dividend is paid. After the dividend is paid to the fund, it would repurchase the bond, enabling the fund to register a tax-exempt gain while the taxable investor would walk off with a deductible tax loss.
- futures and options, including such things as currency hedging. The tax authorities believe it is all right for a fund to hedge its currency risk against specific holdings in a country, but takes umbrage if the fund were to buy Japanese stocks but hedged them in deutsche marks. That practice, they believe, would constitute a speculative activity.
- program trading and "bought" deals. If a fund buys a complete portfolio, it's unlikely to want to retain all the stocks in the deal. Some will have to be unloaded quickly. If that marginal short-term trade is considered taxable, it would alter the entire economic framework of the decision-making process.
- stock lending. While such loans to market makers could be very helpful in ensuring liquid markets; the "profits" are taxed, so pension funds avoid it. This might have contributed to problems after the Oct. 19 crash.

Said Clive Gilchrist of the $3.5 billion Merchant Navy Fund, Leatherhead, Surrey: "As an asset manager, I welcome the Inland Revenue's wish to clear up uncertain points of law. It is attempting to find out about and understand the investment strategy of pension funds. This clarification, if it can be done, will lift a cloud from the decision-making process."

But Colin Lever, senior partner of consulting actuaries Bacon & Woodrow, London, said: "There would have been easier and less painful ways for the Revenue to find out what was going on, if that was what they wanted.

"As it was, they created a lot of unnecessary worry and uncertainty. Nobody knew what they were up to or why, and there was no way to talk to them. All this shadow-boxing has wasted much management time." ■

# Small-cap prospects

*Continued from page 17*

But foreign small-cap stocks are not for everyone, consultants and managers agreed. Those funds attracted to the area typically have several years' experience in international equities, are large enough to diversify their equity styles and view small-cap as a long-term investment.

Nevertheless, the returns can be spectacular. For the one- and two-year periods ended Dec. 31, Dimensional Fund Advisors Inc.'s $60 million Japan index fund returned 83.8% and 63.3% annually, respectively, compared with 32.5% and 55.1% for larger-cap Japanese stocks, said David Booth, chairman and chief executive officer of the Santa Monica, Calif.-based firm.

In the long run, foreign small-cap stocks have outperformed their large-cap counterparts.

In Japan, the lower half of the Tokyo Stock Exchange in terms of market capitalization has returned 28.8% a year from 1970 through 1987, measured in U.S. dollar terms, while the upper half returned 22.7% annually during the same period, according to DFA.

Meanwhile, in the United Kingdom, the Hoare Govett Smaller Companies Index showed a 20.6% annualized return from 1955 through 1987, fully 14 percentage points better than the Financial Times All-Share's 6.2% return. During 1987, small-cap stocks turned in one of their best performances, returning 21.1% compared with the FTA's 7.9%.

Canadian small-cap stocks have generated an annual average return of 12.2% since 1970, nearly double the 6.5% return enjoyed by the Toronto Stock Exchange 300 index, according to Burns Fry Ltd., Toronto.

The evidence stops there as similar data is not available for other markets. Anyway, lower average capitalization sizes in many other markets make such comparisons meaningless, where all but a few stocks may qualify as small-cap.

Thus, some small-cap managers make their biggest bets in Japan and the United Kingdom, with smaller allocations in Europe or among emerging markets.

PCM International, Newark, N.J, has more than 45% of its small-cap portfolio invested in Japanese stocks, with about 18% in the United Kingdom and the rest spread among continental Europe and other Southeast Asia markets, said Cassandra Hardman, portfolio manager.

Small-cap stocks hold out the seemingly contradictory prospect of higher returns for lower risk or the same level of risk, according to some.

For the 18-year period ended Dec. 31, the standard deviation for Japanese small-cap stocks was 25%, compared with large-cap stocks' 23.4%, according to Dimensional Fund Advisors. In the United Kingdom, they were nearly tied, with 31.5% for small-cap stocks and 31.3% for large-cap stocks.

Meanwhile, correlations of foreign small-cap stocks with the Standard & Poor's 500 index are even lower than for large-cap stocks, meaning investors can obtain even greater diversification, according to Mr. Booth.

In dollar terms, the correlation of Japanese small-cap companies is .137 vs. .237 for large-cap stocks; in the United Kingdom, the correlation is .266 for small-cap stocks and .334 for large-cap stocks.

The biggest concern is liquidity, especially in light of the October market crash when trading smaller-cap stocks was virtually impossible. Size limits also are a factor.

"We cannot run $2 billion in small-cap," said Barry Gilman, managing director and chief executive officer of PCM International, which has about $20 million invested in foreign small-cap stocks, including an $8 million portion of a mutual fund run for its parent, Prudential Insurance Co. of America.

In addition, the markets in which managers purchase small-cap stocks are limited. After Japan and the United Kingdom, the choice falls off sharply. Much of Europe has not been hospitable to small- cap stocks, although that might be changing in light of new cross-border takeover activity, new tax incentives and efforts toward a unified market in 1992. ■

# Index funds

*Continued from page 17*

would be expected in specialized index funds, such as those tracking South Africa-free holdings or small-capitalization stocks, it also occurs in funds tracking EAFE.

Blake Grossman, vice president of Wells Fargo, noted because the EAFE index's total return doesn't deduct withholding taxes, "you'd expect a perfectly managed index fund to slightly underperform the index because of withholding taxes."

Cash flow, how income is treated (i.e. whether gross or net dividends are reinvested) and how often a fund is rebalanced can affect returns, said Chase's Mr. Massare.

Portfolios using sampling require more rebalancing and therefore incur more transaction costs, State Street's Mr. Lopardo said.

Tracking methods that aim to curb expenses can cause biases toward large-capitalization stocks because trading small-cap stocks is more costly.

Chase keeps neutral market weights but "optimizes" its EAFE portfolio by buying a smaller number of stocks, said Mr. Massare. "There can tend to be more large stocks, but we try to control that," he added.

Mr. Lopardo said the size of the fund keeps trading costs down. In 1987, 30% of stocks bought for new clients were crossed with stocks traded by existing State Street clients. One swap saved a client $800,000, he said.

The economies of scale attract clients. The firm's international assets tripled in 1985 and in 1986 and grew 50% last year.

He said State Street's commingled fund was able to perfectly track the EAFE over nine years largely because of the economies gained through its tremendous size.

But Jim Kartalia, vice president and director of marketing of American National Bank & Trust, argued small is better: "At our size, it's a lot easier to buy and sell stocks with little market impact." The firm's $220 million index fund excludes illiquid markets and stocks.

Other firms running international index funds for U.S. clients include Alliance Capital Management Corp., New York, which offers a South Africa-free EAFE fund; Bankers Trust Co. — Investment Management Group, New York; The Boston Co. Inc., Boston, which offers individual country index funds; Boston International Advisors Inc., Boston; County NatWest Investment Management Ltd., London; Dimensional Fund Advisors Inc., Santa Monica, Calif., which indexes small-capitalization stocks; Mellon Capital Management, San Francisco, which uses Salomon Russell Global indexes; Northern Trust Co., Chicago, which indexes stocks but actively weights countries; and the Travelers Cos., Hartford, Conn., which uses Financial Times Actuaries World Indexes. ■

*Where Has The Liquidity Gone?*

Liquidity has evaporated as capital and participants have fled the marketplace. Professional Investors have been relying much more on the Jefferies way to get their hard trades done. A broker should be the client's ally rather than adversary. We believe the best trade is when the ultimate buyer and seller set the price. Over the last twenty-five years we have established a unique network to achieve this, including:

200 dedicated professionals
1,600 Institutions
6,000 Corporations

If you trade large blocks and illiquidity has been frustrating, please call Ray Killian, Senior Managing Director, at 617-451-7020. Put the world's strongest trader-sales force on your team.

# Energy stocks perform best

By Trudy Ring

KANSAS CITY, Mo. — Energy stocks were the market's best performers in the first quarter, while telephone bonds led all fixed-income sectors, according to the quarterly analysis by DeMarche Associates.

For the 12 months ended March 31, energy stocks also had the best performance, while Yankee and foreign issues led the bond market despite their poor performance in the most recent quarter.

Energy stocks in the Standard & Poor's 500 stock index gained 13.4% in price in the quarter, while the entire index gained just 4.7%. Stock performance figures are price appreciation only; bond figures are total return. Equities in the energy sector lost 3.8% in the 12-month period, while the S&P 500 declined 11.6%.

The energy sector consists of stocks in domestic and international oil companies and oil services and equipment.

Stocks related to consumer spending were second for the quarter with a gain of 8%. For the 12-month period, they declined 11.4%. This sector includes household goods, food and beverage, tobacco, textile and retail stocks.

Basic industry stocks, 1987's best performers, fell to third in the quarter with a 4.3% gain. For the 12 months ended March 31, they declined 9.8%. Automotive, building materials, chemical, electrical equipment, metals and transportation companies are in this category.

Stocks sensitive to interest rates gained just 2.6% in the first quarter, after leading the market in the previous quarter. For the 12 months, these stocks were down 13.4%. The sector consists of banks, savings and loans, insurance companies and large gas and electric utilities.

Technology stocks had the quarter's worst performance, a decline of 1.2%. For the year ended March 31, they also came in last, down 16.4%. Aerospace, drug, electronics and office-equipment companies are in this group.

The 10 best-performing industries in the quarter were building materials, up 33.1%; textile products and apparel, up 27.3%; oil service and equipment, up 24.6%; special machinery, up 20.8%; integrated domestic oil, up 20.4%; air transportation, up 20.1%; retail sales, up 18.1%; auto parts and accessories, up 17.4%; aerospace, up 15.1%; and automotive — cars and trucks, up 14.1%.

The 10 worst-performing industries were office equipment, down 7.9%; aluminum and copper, down 6.9%; consumer household products, down 4.9%; electrical equipment, down 4.7%; consumer non-durables, down 2.3%; media, down 0.1%; chemicals, up 0.1%; paper, up 0.3%; electric utilities, up 0.9%; and beverages, up 1%.

The quarter's top 10 individual stocks were **Roper Corp.**, up 254.8%; **Firestone Tire & Rubber Co.**, up 149.2%; **J.P. Stevens & Co. Inc.**, up 123.7%; **Federated Department Stores Inc.**, up 121.7%; **Tektronix Inc.**, up 114.1%; **American Standard Inc.**, up 109.9%; **Koppers Co. Inc.**, up 83.3%; **Colt Industries Inc.**, up 82.1%; **Lucky Stores Inc.**, up 80.1%; and **Mohasco Corp.**, up 76.2%.

Besides analyzing the S&P 500 stocks by sectors, DeMarche also categorizes them by quality, growth and yield. As rated by quality of the issuing companies, below-average quality stocks performed best in the first quarter, gaining 9.3%.

As ranked by growth, variable growth stocks had the quarter's biggest gain, 6.3%. As rated by yield, the highest-yielding one-fourth of the market also had the best price gain, 7.9%.

In the bond market, telephone company bonds led for the quarter, with a return of 4.5%. The DeMarche Pension Fund Bond Index of 6,000 issues was up 4%.

Telephone issues had the poorest performance for the 12 months ended March 31, returning 2.7%. The DeMarche index was up 4.9% in that period.

Canadian issues ranked second in the quarter with a 4.4% return. For the year, they returned 4.6%. Utility bonds gained 4.3% in the quarter and 4% for the year.

U.S. government issues and industrial bonds each returned 4% in the quarter; their 12-month returns were 9.7% and 9.5% respectively. Financial company bonds returned 3.8% for the quarter and 5.8% for the year.

Yankee and foreign issues were the poorest performers in the quarter, returning 3.4%, but best for the 12 months, returning 7.3%. They had been the best performers of 1987.

As ranked by quality, below-average bonds had the quarter's best return, 4.3%. As rated by maturity, bonds in the 10- to 20-year range performed best, as they were up 4.5%. Bonds combining the characteristics of these categories had the best return, 5.3%, when ranked by quality and maturity combined. ■

Who offers your defined contribution plan participants the flexibility of daily telephone transfers between funds?

The same company who offers excellent investment management.

As a leading provider of 401(k) and other defined contribution plan services to more than 1,000 corporations across the country, Fidelity Investments offers a wide range of investment management and client services designed to meet the needs of both you and your employees.

**A Wide Array Of Nationally Known Funds.** With more than $70 billion in assets under management, Fidelity offers a broad choice of professionally managed mutual funds ranging from equity funds like Fidelity Magellan Fund and Fidelity Equity-Income Fund, to money market funds and GIC's. The funds are available on a *no-load* basis to plans with more than 200 eligible employees. And, as market conditions or personal investment objectives change, plan participants have the flexibility to transfer their investments among available mutual funds by telephone on any business day.

**Comprehensive Recordkeeping.** Fidelity's recordkeeping services are designed specifically to reduce your administrative burden.

Not only can your employees call us directly to transfer existing balances, they can also redirect future contributions by telephone. Our state of the art system and experienced employee benefit professionals work to ensure timely and accurate reports for both you and your employees.

**Employee Communications Support.** Fidelity will work with you to develop the communication materials needed to support your employees from enrollment through retirement. We'll help you explain your program and the available investment options clearly and effectively. In addition, your employees can call toll-free 24 hours a day, seven days a week and talk with a knowledgeable Fidelity representative about available investment options.

For more information about Fidelity's defined contribution plan services, including fund prospectuses covering management fees, expenses, and applicable sales charges, please call Jeffrey Paster, Corporate Market Manager, at 1-800-345-5033. In Massachusetts call collect 617-570-5692.

# Funds select Hanseatic to hedge assets

LOS ANGELES — Whittaker Corp. hired Hanseatic-American Group Inc., Albuquerque, N.M., to hedge pension and 401(k) assets with an alternative to portfolio insurance, said Joseph Kleiman, a retired Whittaker senior vice president and consultant to the plans.

Hanseatic-American will provide an overlay hedging strategy, using stock index options, on about $60 million of the $100 million pension fund and $10 million of the $30 million 401(k) plan.

The manager will hedge, only when predicting a down market, by buying put options and selling call options. It will have authority to use futures to simulate options, but only if it cannot move in the options market, Mr. Kleiman said.

Whittaker formerly hedged the assets with a portfolio insurance program run by Oppenheimer Capital Corp., New York. Portfolio insurance, involving the sale of stock index futures in response to a portfolio decline, cushioned the fund somewhat in the October stock market decline, but didn't work as well as promised, he said.

The portion of the pension fund not covered by the Hanseatic-American hedging program is run by Kennedy Capital Management, St. Louis, and Davis, Weaver & Mendel Inc., Atlanta. ■

# GIC rates tumble

## Stable period to follow sharp decline

By Curtis Vosti

Rates on insurance company guaranteed investment contracts declined sharply at the beginning of the year, but observers say rates have firmed up as 1988 enters its second quarter.

"Basically, we saw a significant drop in the first quarter of the same magnitude as that of Black Monday (Oct. 19) but it was spread over a month and a half instead of a day," said Peter Bowles, president of Fiduciary Capital Management Inc., Woodbury, Conn. "Since then, there has been relatively little activity."

The drop coincided with what analysts say continues to be a strong demand for GICs, exacerbated by the Oct. 19 market fall.

Window GICs purchased shortly after the crash flooded the market in January, said Scott Sokol, director of investments for Chambers, Dunhill, Rubin & Co., Beverly Hills, Calif.

"Plans which were planning on transferring $1 million or so ended up having to transfer double or triple that amount" because employees were switching from equity investments in their 401 (k) plans, Mr. Sokol said.

He said some insurance companies suffered losses at the beginning of the first quarter because they had to hedge more than anticipated to cover the flood of GIC money at the turn of the year.

Messrs. Sokol and Bowles said, however, the use of GICs and similar instruments should continue to expand even though insurance companies have capacity limitations.

"The industry is reacting as you would expect," said Mr. Bowles. "The capacity is continuing to expand in a variety of forms."

The first quarter also saw a narrowing in the spread between GICs and Treasury securities of similar maturity by as much as 80 to 100 basis points, he said.

"What used to be 150 (basis point spread) on a five-year deal, you're lucky to get 70," said Mr. Sokol.

John Knight, president of Lamberson Knight Securities, a Short Hills, N.J.-based GIC brokerage, said he expects the second quarter to be less volatile, with rates fluctuating only about 30 to 40 basis points.

"At the beginning of the (first) quarter, the market had great expectations," Mr. Knight said. But concerns over renewed inflationary pressures dropped rates during the quarter until "right around March 1 when it turned around," he said.

Figures from William M. Mercer-Meidinger-Hansen Asset Planning, Dallas, show the average rate for a three-year, compound $1 million GIC March 4 was 7.52%; by April 1, it was 7.78%.

In December, the average rate was 8.39%.

"There may be some additional firming of rates, but this being an election year, you never know," Mr. Bowles said. "GICs are going to follow the general trend of traditional rates, though they don't go in lockstep with the other rates. I think the Fed is a major factor, no matter what you're talking about."

"I think you'd be throwing darts at a wall to figure that one out," Gene L. Gochenour, president of GIC Inc., Beaverton, Ore., said of the role of the an election-year Fed on interest rates.

GIC Inc. and Lamberson Knight provide insurance company rate quotations on representative five-year, single-deposit, simple-interest, $1 million GICs as follows:

- Allstate Life Insurance Cos., Northbrook, Ill.: March 31, 8.41%; Dec. 31, no quote.
- American United Life Insurance Co., Indianapolis: 8.36%; 8.7%.
- Bankers Life Assurance Co., Des Moines, Iowa: 8.12%; 8.53%.
- Canada Life Assurance Co., Toronto: 8.6%; no quote.
- Confederation Life Assurance Co., Toronto: 8.85%; 9.3%.
- Connecticut Mutual Life Insurance Co., Hartford: 8.37%; 8.56%.
- Crown Life Insurance Co., Toronto: 8.25%; 8.77%.
- Great West Life Assurance Co., Denver: 8.06%; 8.59%.
- Hartford Insurance Group, Hartford, Conn.: 8.55%; 8.85%.
- Home Life Insurance Co., New York: 8.21%; 8.64%.
- John Hancock Mutual Life Insurance Co., Boston: 8.41%; 8.53%.
- Life Insurance Co. of Virginia, Richmond: 8.7%; 8.48%.
- Massachusetts Mutual Life Insurance Co., Springfield: 8.13%; 8.62%.
- Minnesota Mutual Life Insurance Co., St. Paul: 8.63%; 9.31%.
- Mutual Benefit Life Insurance Co., Newark, N.J.: 8.3%; 8.75%.
- Mutual of New York, New York: 8.35%; 8.54%.
- New England Mutual Life Insurance Co., Boston: 8.02%; 8.66%.
- New York Life, New York: 8.35%; 8.8%.
- Northwestern National Life Insurance Co., Minneapolis: 8.37%; no quote.
- Ohio National Life Insurance Co., Cincinnati: 8.75%; 9.22%.
- Pacific Mutual Life Insurance Co., Newport Beach, Calif.: 7.92%; 8.48%.
- Pan American Life Insurance Co., New Orleans: 8.69%; 8.89%.
- Penn Mutual Life Insurance Co., Philadelphia: 8.82%; 9.12%.
- Phoenix Mutual Life Insurance Co., Hartford, Conn.: 8.5%; 8.94%.
- Provident Mutual Life Insurance Co., Philadelphia: 8.46%; no quote.
- Provident National Assurance Co., Chattanooga, Tenn.: 8.37%; no quote.
- SAFECO Corp., Seattle: no quote; 9.4% (Jan. 11).
- Southwestern Life Insurance Co., Dallas: 8.66%; 8.75%.
- State Mutual of America, Worchester, Mass.: 8.35%; 8.65%.
- SunLife of Canada, Wellesley, Mass.: 8.7% (March 29); 9.2% (Jan. 11).
- Union Central Life Insurance Co., Cincinnati: 8.63%; 8.83%.

Mercer-Meidinger-Hansen also surveys insurance companies for rate quotations, but does not identify the companies. A summary of various bullet GICs for March is as follows:

- Three-year, $1 million, compound: high, 8.23%; low, 6.83%; average, 7.65%.
- Three-year, $1 million, simple: high, 8.21%; low, 6.67%; average, 7.62%.
- Five-year, $1 million, compound: high, 8.94%; low, 7.52%; average, 8.31%.
- Five-year, $1 million, simple: high, 8.96%; low, 7.2%; average, 8.25%.
- Seven-year, $1 million, compound: high, 9.3%; low, 7.83%; average, 8.65%.
- Seven-year, $1 million, simple: high, 9.35% low, 7.7%; average, 8.54%.
- Three-year, $5 million, compound: high, 8.19%; low, 7.01%; average, 7.68%.
- Three-year, $5 million, simple: high, 8.21%; low, 6.85%; average, 7.65%.
- Five-year, $5 million, compound: high, 9.04%; low, 7.58%; average, 8.38%.
- Five-year, $5 million, simple: high, 8.99%; low, 7.57%; average, 8.31%.
- Seven-year, $5 million, compound: high 9.34%, low, 7.87%; average, 8.71%.
- Seven-year, $5 million, simple: high, 9.35%; low, 7.8%; average, 8.58%.

Dietrich & Associates, a Blue Bell, Pa.-based GIC brokerage firm, provided the following rate spread data between a $1 million five-year, simple interest GIC and the average Treasury note of the same maturity for 1988's first quarter:

- Jan. 4: GIC, 9.3%; T-note, 8.45%.
- Feb. 1: GIC, 8.60%; T-note, 7.74%.
- March 1: GIC, 8.65%; T-note, 7.64%.

The same information for the previous three quarters was:

- Dec. 9, 1987: GIC, 9.28%; T-note, 8.59%.
- Sept. 2, 1987: GIC, 9.5%; T-note, 8.59%.
- June 2, 1987: GIC, 9.05%, T-note, 8.19%. ■

## Air Products names exec

ALLENTOWN, Pa. — Raymond A. Glennon has been named assistant treasurer of Air Products and Chemicals Inc., replacing David H. Kelly, who will remain an assistant treasurer but focus on corporate finance.

Mr. Glennon has been with Air Products 14 years. He most recently was director of its federal government relations office in Washington. He also has managed the employee benefits department and has had positions in tax, controllership and investor relations.

In his new position, Mr. Glennon is responsible for the investment of the company's $700 million in pension plan assets.

We are most pleased to announce
the addition of
Managing Directors

# Merck tops best list

*Continued from page 1*
investment management unit of MCorp.

Merck produces human and animal health products as well as specialty chemicals that have application in water treatment, food processing, skin care and other fields.

Merck, Rahway, N.J., reported gains in income in 1987 because of such products as Vasotec, used to control high blood pressure, and Pepcid, a drug used to treat ulcers. The company also gained from sales of Recombivax HB, a hepatitis B vaccine made with recombinant DNA technology.

"The dedication of Merck's management team to building shareholder value was tangibly demonstrated in the major stock repurchase program (of $1 billion) and the maximization of sales growth for new products and even those that are more mature," according to a Goldman, Sachs & Co. report on the company.

The company's 1987 "financial results make delightful reading," said Neil B. Sweig, an analyst at Prudential-Bache Securities Inc., New York. Mr. Sweig, in a recent report, recited the good news about Merck in 1987: a 35% increase in operating income and a 37.7% increase in earnings per share.

The report also lauds the 7.9% increase in cost of goods, 28.5% of sales compared with 32.4% in 1986. This performance is "possibly (a) unique control of manufacturing costs for so large a company growing so rapidly."

Merck's future looks bright, Wall Street analysts say. If new drugs are as successful as expected, earnings per share should double by 1990, according to Cowen & Co. Institutional Services, Boston.

* * *

**General Electric** ranked high in the survey because of the company's nimble acquisition and divestiture of assets.

In 1987, for example, GE acquired CGR, a European-based medical diagnostics imaging business, from Thomson S.A. of France. In exchange, Thomson received GE's consumer electronics business.

This move bolstered GE's global medical systems business while allowing it to divest a business no longer considered strategically important, according to GE's annual report.

The company's varied mix of businesses insulate it from the dangers of recession. About 40% of its earnings come from units that do not track the general economic cycle — aircraft engines, aerospace, electric utility equipment and medical equipment — according to a report by H.P. Smith, analyst at Smith Barney, Harris Upham & Co., New York.

Although GE has reshaped itself substantially in the past few years, the company still has an appetite for acquisitions. "They will continue to make acquisitions that fit with their existing operations," said Linda M. Shuman, an analyst at Prudential-Bache.

Ms. Shuman praised GE's strategy, saying its acquisitions resulted in valuable synergies and leading positions in many markets.

"We have been a long-term holder of GE. I have high regard for Jack Welch (chairman and chief executive officer of GE). He's a good manager and has focused on the areas he wants to be in, divests of the others and pushes for profitable growth," said Grafton M. Potter, vice president and director of research, United Missouri Investment Counsel Service, Kansas City, Mo.

* * *

**Wal-Mart Stores**, a national discount department store chain based in Bentonville, Ark., took third in the survey.

Money managers credited the management team led by Sam M. Walton, chairman and chief executive officer and pioneer of the strategy of offering name-brand merchandise at low prices.

"Wal-Mart Stores' strategy has involved meticulous attention to detail and good old-fashioned business execution," said Eldon C. Mayer Jr., president and chief investment officer, Lynch & Mayer, Inc., New York. "They have decided to always be reducing prices. You can only do that by making a religion out of keeping costs down. They are many times better than the next best company in the retail industry."

Mr. Mayer said Wal-Mart stock, now selling at more than 20 times earnings, has been a cornerstone of the firm's investment portfolio. "We've owned them for years and never had a disappointing quarter," he added.

The company has performed admirably through the years, repeating a string of strong earnings reports. Net sales for the fiscal year ended Jan. 31, 1987, surged to record levels of $11.9 billion, up from $8.45 billion a year earlier. Net income for fiscal 1987 rose to a record $450 million, up from the previous year's record of $327 million, thanks in part to an aggressive sales and expense control program. Net income per share increased to $1.59 from $1.16 the year before. Operating expenses as a percentage of sales declined throughout the year. Shareholder equity, which in fiscal year 1986 exceeded $1 billion for the first time, grew an additional 32% in fiscal 1987 to $1.7 billion from $1.3 billion.

The growth and renovation program planned in fiscal 1988 includes the addition of 125 Wal-Marts, 20 Sam's, and the expansion or relocation of 55 older Wal-Mart stores.

Stephen F. Mandel, who follows Wal-Mart for Goldman, Sachs & Co., estimated in a recent report that earnings growth during the next five years will be about 20% to 25% annually. Although that range doesn't equal the 30%-plus rate Wal-Mart investors have seen historically, Mr. Mandel said it represents about three times the rate of the market.

"Its growth record almost speaks for itself," said Mr. Potter of United Missouri. "They've handled very rapid expansion very well," he said.

* * *

Investment managers rated **McDonald's** fourth among the five best managed companies they selected.

Noting most of the restaurant industry is in the doldrums, they pointed to McDonald's as a standout. They rang off a long list of attributes, including the vision and innovation of management, menu innovation, strong real estate management and operational efficiency that has been achieved throughout the company.

"Through competence and innovation, McDonald's has remained the quintessential company in a difficult industry. It has a superior record and has enjoyed continued success," said Peter Schliemann, senior vice president and director of research at David L. Babson & Co., Boston. "It's an excellent stock. Earnings come in strong year in and year out and it's a financially strong company."

Because of higher sales by existing restaurants, new restaurant expansion and the effect of stronger foreign currencies, McDonald's systemwide sales were up 15% to $14.3 billion in 1987 from $12.4 billion in 1986. Foreign sales also rose to $3.7 billion from $2.9 billion. Total revenue was up 15% to $4.9 billion from $4.2 billion, while net income also rose to $596 million from $480 million in 1986.

The food company's growth strategy focuses on adding more than 500 restaurants per year, with about 60% in the United States and 40% overseas. This year, McDonald's expects to open its first restaurants in Yugoslavia, Hungary and South Korea.

"McDonald's is poised to capitalize on its strong 1987 operating performance and should pick up additional market share in 1988. We anticipate that in 1988, the company will utilize a lower tax rate, cost savings from its new in-store processor and a strong promotional lineup to keep pressure on its fast-food rivals," Jay H. Freedman, who follows the company for Kidder, Peabody, said in a recent report. "With the aid of tax reform, which alone should boost the company's 1988 earnings by roughly 7.5%, and a normal year of new unit openings, McDonald's is virtually assured of a solid 12%-plus earnings gain for the upcoming year."

* * *

**Digital Equipment**, the computer manufacturer, was ranked fifth.

As was the case with McDonald's, money managers credited the company with performing well in a highly competitive and uncertain industry. While the stock has not been performing well of late, money managers said Digital's strategy would pay off in the long term even though the company now is out of favor.

"Over the years it's been one of the larger companies in the industry gaining market share in a tough competitive industry," said Jim Holmes, managing director, Dreman Value Management, New York. "They do it not by being the fanciest company but by offering quality products that meet their customers needs."

His firm only recently began buying Digital stock, which is relatively cheap, selling for about 9.5 times earnings. "They have good profit margins in an industry where profit margins are all over the board. The typical growth rate (for Digital) is 15% to 20% a year," Mr. Holmes said.

Third-quarter results for Digital, whose 1988 fiscal year ends in June, were considered decent on Wall Street, but clearly were affected by various industry pressures. Total revenue grew 17.2%, to $2.8 billion from $2.4 billion the prior year, while earnings per share showed only a fractional gain. Corporate orders rose about 19% worldwide.

George Elling, who follows the company for Merrill Lynch Capital Markets, said in a recent report the major disappointment during the third quarter was product sales grew only 12.4%, reflecting the hesitancy being expressed by minicomputer customers, especially for high-end systems. Margins were under pressure too. Mr. Elling looks for fourth-quarter earnings to exceed the $2.85 reported in the fourth quarter of fiscal 1987.

"From a stock standpoint, we believe that the bad quarter is now out and much will depend on whether Digital's U.S. customers regain confidence in the economy and begin to commit to high-end systems," the report said. ■

# Market crash still being felt

By Brad Rudin

Although first-quarter financial results suggest some securities firms are still battling the effects of Black Monday, Morgan Stanley Group Inc. seems poised to turn in the kind of performance that made it the most profitable major securities firm last year.

Morgan Stanley boosted its first-quarter earnings 53% from the same period last year, while some of its Wall Street competitors — First Boston Inc., Merrill Lynch & Co. and PaineWebber Group Inc. — reported declining profits.

Net income slid 37% at Merrill Lynch, 36% at PaineWebber and 45% at First Boston.

The effects of last year's stock market plunge could be seen in reduced commission revenue at the retail-oriented firms. Reduced investment banking revenue undermined profitability at several Wall Street houses.

On the plus side, an upsurge in merger and acquisition activity boosted financial advisory revenue.

Principal transactions, which includes trading, risk arbitrage and other business for the firms' own accounts, also bolstered industry revenue.

"The one line that is better than everybody expected is the trading line," said Stephen J. Schwartz, an analyst at Shearson Lehman Hutton Inc. "A large portion of (the firms) were able to capitalize on the more positive fixed-income environment."

Several firms tried to buoy the bottom line with reductions in compensation and benefit expense. Comparing the first quarter of 1988 with the year-earlier period, compensation expense declined 32% at First Boston, 14% at Merrill, 4% at Salomon Inc. and less than 1% at PaineWebber.

Compensation and benefit expense increased 27% at Morgan Stanley. This item was not available for Shearson Lehman Hutton.

Salomon made a noteworthy comeback with a 16% increase in net income, which ended a nine-month decline in profitability.

Salomon's prospects for increases in profitability depend in part on the fixed-income markets, Mr. Schwartz said. "If rates really move up I doubt if they can sustain current levels, but I certainly think they will be profitable and make some nice money," he said.

Shearson Lehman Hutton saw profits increase almost 4% in the first quarter, the first period in which the firm's earnings from E.F. Hutton & Co. were included.

Merrill Lynch experienced a slide in earnings despite its position as the biggest underwriter of corporate securities in the first quarter. Investment banking revenue at the firm declined primarily because of "lower equity underwritings and the absence of any significant merger and acquisition transactions," according to a statement issued by the firm.

Merrill Lynch and PaineWebber will underperform the institutional-oriented investment banks because of the lack of retail business and the costs associated with the distribution system, according to a report issued last month by Mr. Schwartz.

"In our judgment, firms that focus on non-retail activities will continue to outperform not only because of the lower expense burden but also because of significant increases in certain lines of business, specifically (mergers and acquisitions), as well as a more positive fixed-income environment and potentially large risk arbitrage gains," the report said.

Although the investment banks with an institutional base are expected to report year-over-year earnings declines, these reductions in profitability will be more severe at firms with large retail branch networks, according to a report by Larry Eckenfelder, an analyst at Prudential-Bache Securities Inc.

Morgan Stanley attributed its first-quarter success to higher financial advisory revenue and debt underwriting fees, which offset a lower level of equity underwriting. The firm also reported revenue from sales and trading, asset management, foreign exchange and the commodities business contributed to the performance.

Investment banking revenue at Morgan Stanley increased 29%, to $197 million from $153 million, while revenue from principal transactions increased 16%, to $244 million from $211 million.

First Boston, which has been hurt by the defection of key investment bankers, sustained a 25% reduction in investment banking revenue in the first quarter. Trading losses in mortgage securities helped to shrink principal transaction revenue 31%, to $142 million from $207 million. ■

**First-quarter brokerage firm earnings**

| | Net income ($ thousands) | | Percent change | Earnings per share | |

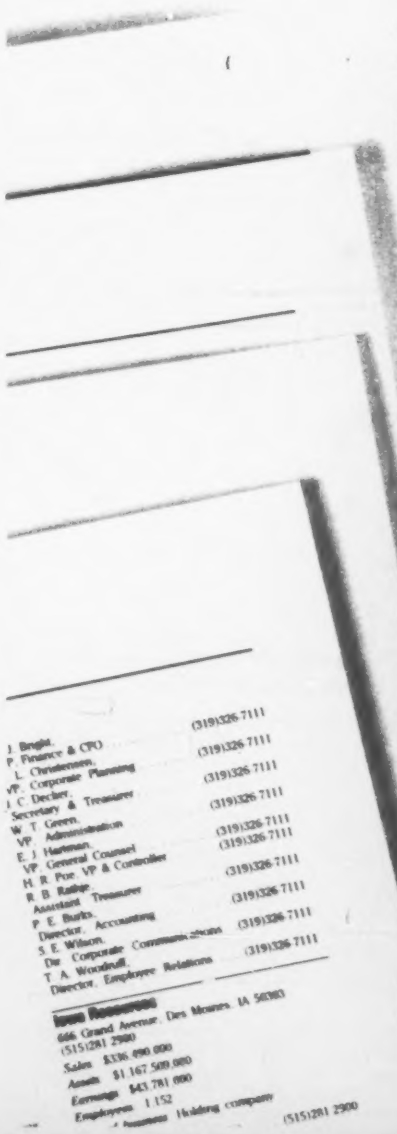
# FOCUS ON THE TOP.

OVER 20,000 KEY CORPORATE FINANCIAL EXECUTIVES FROM THE TOP 1,500 CORPORATIONS.

As well as top financial and related service companies in:

**Accounting • Associations • Banking-Corporate • Commercial Finance • Consulting • Corporate Law**
**Financial-Investor Relations • Financial Printers • Foreign Banking • Insurance • Investment Banking**
**Investment Management • Leasing • Real Estate • Securities • Stock Exchanges • Travel**



Selectivity is the rationale behind The Financial Register. Only the top corporations and financial service companies are listed. The Register unlike an association or industry directory does not attempt to list everyone in business. It is the prime resource to the most important corporate financial executives in the nations top 1,500 corporations as well as, in the leading financial service companies.

## The Right Reasons.

Why should you commit any of your advertising or promotional budget to this product?

First, The Register goes to the right people. Reach key corporate financial management... treasury, tax, cash management, real estate and financial executives. Over 20,000 key executives in the of 1500 top corporations receive The Register semi-annually. 100% of these select and monitor corporate financial services for their companies.

Second, the financial sector buys big and these are the buyers. It is one of the largest consumers of computer software, hardware and ancillary services. It is the largest user of pension products and services and the largest buyer of property and casualty insurance.

Finally, decision-makers who buy your product or service will use The Register daily as a corporate guide, a telephone book and most importantly, a buyer's guide. Detailed company profiles support your ad and clearly present users with options to assist them in their daily decision-making.

Listings alone may support your marketing efforts, but they won't distinguish you from the pack. Advertising will.

## The Right Place.

Published semi-annually, The Financial Register brings the corporate financial market together in a single publication with one purpose: USE.

The Register delivers basic corporate information on the 1500 most important companies. It will list more than 20,000 key corporate financial executives with full names, titles and direct dial numbers. These executives will find The Register satisfies their basic demand for information on:

- financial decision makers
- reporting relationships
- essential financial services.

The Financial Register is up-to-date and there when needed. It is part of state-of-the-art database system. The Register is not just another overpriced and overweight finance bookend that only corporate libraries can afford to purchase and keep around. Conventionally produced directories published annually simply don't have the same staying power.

## The Right Choice.

The Financial Register reaches over 20,000 top corporate financial executives. Your sales message will go straight to the top and stay there. These people want quick access to a complex network of companies and the people that make them run.

The bottom line is, an ad in The Financial Register is a good buy. Reach out to your markets with repeated visibility through this directory's long shelf life and frequent use. On CPM, shelf life and repeated exposure, The Register can do more with an advertising budget, large or small, than any other single publication.

If your first priority is to reach the right market, at the right price, reserve space now. For information, call us at 1-800-247-1695 or (212) 210-0784.

# Credit quality takes dip

By Brad Rudin

Credit quality in the first quarter sagged under the weight of takeover activity and weakness in the industrial and financial services sector.

The combined downgrades assigned by the five major agencies exceeded the number handed out in the fourth quarter of 1987.

Although the number of downgrades suggested a marked decline in credit quality, downgrades as a percentage of total rating actions produced a less dire view.

Still, the data broadly show a continuation of the downward trend in credit quality.

"A major factor in downgradings continues to be takeover mania," William A. Cornish, the head of the rating committee at Duff & Phelps Inc., said in a statement issued by the Chicago-based credit rating agency.

The rising volume of corporate takeover activity and recapitalization programs will undermine credit quality for the rest of 1988, rating agency analysts said.

"Given the number of announced bids we are seeing and the huge amounts of new financing that will be required to bring them to fruition, we expect special events will account for more corporate downgrades this year than in 1987," said Harold H. Goldberg, a senior vice president at Moody's Investors Service, New York.

Special events — mergers, acquisitions and stock buybacks — accounted for 24% of the corporate downgrades in the first quarter, Moody's reported. It cited Eastman Kodak Co.'s acquisition of Sterling Drug Inc., Shearson Lehman Brothers Inc.'s purchase of E.F. Hutton & Co. Inc. and stock buybacks at Allied-Signal Inc. and Hospital Corp. of America as examples of ratings lowered as a result of special events.

Ratings slipped sharply in the industrial sector, Standard & Poor's Corp. reported in Credit Week, with downgrades exceeding upgrades by a 2.3-to-1 margin in the first quarter compared with 1.3-to-1 for all of 1987.

The cost-plagued health-care industry suffered a sharp decline in credit quality, Standard & Poor's reported. But the agency also noted improving credit quality among some of the basic-metals producers — Aluminum Co. of America, Bethlehem Steel Corp., Inland Steel Co. and Inco Ltd.

Overall, downgrades accounted for 55% of the rating actions at Duff & Phelps in the first quarter compared with 61% in the fourth quarter of 1987. At Fitch Investors Service, downgrades made up 64% of the rating actions in the first quarter vs. 65% in the preceding quarter. Downgrades at McCarthy, Crisanti & Maffei Inc. accounted for 88% of the rating actions in the first quarter compared with 52% in the fourth quarter.

Downgrades accounted for 69% of rating actions at Moody's in the first quarter compared with 79% in the last quarter of 1987. At Standard & Poor's, downgrades made up 69% of the first quarter rating actions vs. 68% in the preceding quarter. ■

**Corporate credit rating changes**

| | 1st quarter 1988 | | 4th quarter 1987 | |
|---|---|---|---|---|
| | Up | Down | Up | Down |
| Duff & Phelps | 20 | 24 | 12 | 19 |
| Fitch Investors Service | 5 | 9 | 6 | 11 |

# Buybacks

*Continued from page 1*

William F. Harnisch, president of Forstmann-Leff Associates Inc., New York.

But Charles Plohn, a managing director in the equity transactions group at Merrill Lynch Capital Markets, New York, said six months isn't long enough to measure the effect of buybacks.

"I don't think you can judge the results of things on the basis of a few months because I don't think that that should be the purpose of a buyback program. It should have longer-term implications," he said.

A study by Georgeson, published in the firm's quarterly newsletter, focused on the short-term results of stock buyback announcements. "(T)hese buybacks barely affected share prices," Georgeson concluded.

Georgeson, a proxy solicitation and investor relations firm, examined all 114 companies in the S&P 500 that announced buybacks between Oct. 20 and Oct. 30. In a comparison with the stock index, Georgeson found the average stock in this group underperformed the market by 0.7 percentage points on a market-weighted basis in the first week after the buyback announcement. The group of 114 companies outperformed the market by 1.1 percentage points in the two weeks following the announcement, Georgeson reported.

Georgeson confirmed these findings in a study of 255 exchange-listed companies that announced buyback programs during the two-week period after Black Monday.

These companies underperformed the S&P by 0.5 percentage points from Oct. 19 to Oct. 30. In the first four weeks after the announcements, these companies lagged the index by 0.1 percentage points.

Still, the wave of buyback announcements following Black Monday did exert a positive influence on the market, Georgeson said: "While shareholders of the companies may not have benefited directly, they and other shareholders as well benefited indirectly from stronger markets which resulted from the slew of repurchase announcements."

# IMI index futures contracts draw institutional concern

By Marlene Givant

Derivative contracts based on an international index with real-time pricing during the U.S. trading day are meeting skepticism from institutional investors.

The International Market Index was announced before Black Monday, but the Commodity Futures Trading Commission now is reviewing whether to allow a futures contract based on the International Market Index to trade on the Coffee Sugar and Cocoa Exchange. Meanwhile, the Securities and Exchange Commission is evaluating an IMI option that would trade on the American Stock Exchange, New York.

The CFTC has objected to proposed international-stock index contracts, such as futures on the Morgan Stanley Capital International Europe Australia Far East index, because of worries about pricing foreign indexes during trading hours in the United States while foreign markets are closed.

In addition, both the CFTC and SEC are concerned about how stock index derivative instruments address volatility in light of Oct. 19. The SEC has mandated that the AMEX adopt a surveillance agreement with key foreign exchanges on the IMI option, said Ivers Riley, AMEX senior vice president.

The IMI includes 50 blue-chip foreign stocks and large, high-quality American Depository Receipts, which are domestically traded receipts for shares of a foreign corporation. There are about 800 ADRs listed mainly on "pink sheets" which list quotations of over-the-counter stocks.

The index, which represents nine countries, would allow investors to manage international volatility with futures and options.

"If the existence of futures and options on domestic indexes makes perfect sense, then it makes sense on international too," said James Bowe, senior vice president of market development at the CSCE.

Institutions are concerned, however, the mostly ADR index might not generate sufficient support for a derivative market.

Meanwhile, the Chicago Mercantile Exchange is awaiting approval from the SEC and CFTC to trade futures and options and trade options on futures based on the EAFE index. The Chicago Board Options Exchange also might trade cash options based on the EAFE index.

Prices of EAFE stocks, which represent 19 countries, would be updated based on currency movements. IMI securities, which trade on the AMEX, New York Stock Exchange and the National Association of Securities Dealers Automated Quotations system, would be priced on a real-time basis.

Real-time pricing makes the IMI more attractive than existing international indexes that calculate prices at various points during the day, depending on the closing times of markets, Mr. Bowe said. Unlike existing indexes, the IMI reflects intraday currency fluctuations against the dollar in each of its securities' home markets.

Still, institutions aren't yet sold on the IMI concept.

Jeff Ricker, a consultant at Mellon Capital Management, San Francisco, which runs $19 billion for U.S. tax-exempt clients, said "we're pretty stuck on the (Standard & Poor's 500 stock index). We use the (Salomon-Russell Global index) for foreign stocks. To the extent ADRs are in those indexes, we would buy them."

Some investors might not like the IMI's large-capitalization emphasis. "The idea sounds interesting. Normally the problem of using an ADR portfolio is the large-cap bias. I suspect it is going to bother people," said Eric Seff, managing director of indexing and hedging of Chase Investors Management Corp. ■

# Coming back

*Continued from page 3*

500 would have ranked slightly above the median.)

"I'm a great fan of Dean LeBaron," Mr. English added. "He's on the leading edge of investments. I would recommend (the firm) to anyone."

The Ford Foundation, nevertheless, dropped Batterymarch.

Although Mr. English said the fund wanted to run more money internally, it still employs about a dozen outside managers. When asked why the fund chose to retain those managers over Batterymarch, Mr. English suddenly decided to end the conversation.

Consultants interviewed said they haven't recommended Batterymarch in searches. Only some would speak for attribution.

Mr. LeBaron noted Batterymarch's widely publicized practice of trading at low commissions would make it unattractive in any case to some consultants.

At Lockheed Corp., Calabasas, Calif., which has a $5.5 billion pension fund, George C. Weintz, investment counsel, said, "We're asking a lot of questions" about Batterymarch. "There have been some disappointments." He declined to mention specifics, saying Lockheed, a client since 1979, is just beginning to look at the firm.

"If Dean wasn't such an intellect, such a forward thinker, he'd be long gone," Mr. Weintz added.

"Everyone I knew there, most of us knew there, is gone except for Dean," he added.

Mr. LeBaron describes Batterymarch as a contrarian, quantitative manager that follows a disciplined approach. The firm buys stocks according to themes, now weighted to industrial and energy stocks. A typical portfolio contains about 120 stocks in different weightings, a number that hasn't changed through the years.

He attributes the recent years of underperformance to three factors: its emphasis on small-capitalization stocks, which as a market subset had done poorly; the sharp decline of cyclical companies, which now are benefiting from a lower dollar; and the incomplete application of a theme that it calls "corporate valuation."

Of the latter, Mr. LeBaron said Batterymarch began applying the theme in the past three years. "Our first application of corporate valuation emphasized hard assets — working capital, real estate, book value," he said. But he added that it became clear that corporations value themselves in other ways as well, such as by unused debt capacity, technological competence and market share dominance. These less tangible aspects were only more recently incorporated into the corporate valuation theme.

Jeffrey O. Drinan, vice president at New South Capital Management Inc., Memphis, Tenn., recalls dropping Batterymarch when he was running the Federal Express Corp. pension fund.

He blames Batterymarch's fast growth for contributing to its performance problems.

"It's a typical story; they had $500 million or $1 billion under management when they did well," he said.

The growing asset size forced Batterymarch, a contrarian, "to become the ultimate contrarian and buy all the stocks everyone was dumping," he added.

Federal Express had $30 million with Batterymarch for three years, including two underperforming years, and terminated the relationship in 1986.

"Had we thought (there were) prospects for him to do better, we would have kept him," Mr. Drinan added.

"I doubt Batterymarch would do as well in the future as it did in the past when it had significantly less money."

Some other clients and former clients, who declined to comment for attribution, also cited Batterymarch's size as contributing to its underperformance. Batterymarch recorded its best string of results in the 1970s as a firm with relatively far fewer assets. It didn't reach $1 billion in assets until 1978. In the 10 years since then, ended Dec. 31, it has beaten the S&P 500 by an average 20 basis points a year, less than its management fee.

Mr. LeBaron, however, dismissed suggestions that the firm's size hurt performance. He noted the firm had a string of good years with billions of dollars under management in the early 1980s, adding the firm lately also has been outperforming. "I don't see much difference to running $12 billion or $9 billion," he said.

Concern also was expressed that Mr. LeBaron has been devoting too much time to global ventures, including a new Brazil fund, even though most of Batterymarch's assets are invested domestically.

Indeed, the bulk of the money for foreign clients — most of which are institutions — is invested in the United States. In addition, last year Batterymarch began a mutual fund for Japanese clients; that fund also is invested in the United States.

Batterymarch is working with New Japan Securities Co. and Yamaichi Securities Co. to introduce its U.S. investment approach to Japanese investors.

The $1.3 billion pension fund of Southern California Edison Co., Rosemead, cut back Batterymarch's assignment late last year. Rick Yamamoto, supervisor-pension investments, said the fund wanted to diversify equity managers more, noting it reduced exposure with two other managers, while hiring five others.

He acknowledged the Batterymarch reduction "was a recognition that something is going on," but added, "we're willing to hang on. We have confidence in Dean."

Mr. Yamamoto said fund executives were concerned about the staff departures, but aren't sure of their contribution to performance.

Mr. LeBaron is vague about the contribution the departing executives made to the investment process. He said their departure is healthy, allowing the firm to generate new ideas. He declined to blame them for poor ideas.

At the $3 billion State Universities Retirement System of Illinois, Champaign, Kenneth L. Codlin, investment officer, said Batterymarch's performance "is not something I'm presently losing sleep over."

He attributed the underperformance to Batterymarch's emphasis on small-capitalization stocks, which have rebounded only recently after relatively poor performance since 1983.

"If we were going to come to a view that small-capitalization stocks aren't going to do that well, that would be of concern," Mr. Codlin said. "But we don't have that view."

He also doubted Batterymarch's size is a problem: "It seems to me they can handle significant amounts of money."

But he acknowledged Batterymarch is only for investors with long horizons and little need for liquidity.

Mr. LeBaron, unlike many other money managers, is open about his firm's record, a characteristic he said contributes to inspiring loyalty among clients.

But Mr. LeBaron said he might change the firm's presentation. He suggested scrapping the customary annual periods for measuring performance, preferring instead a "real" time, or constantly updated, basis.

In a recent conversation, he preferred to give performance under his real time scheme, a 20-month basis, ended March 31. During that time, Batterymarch returned 16%, compared with the S&P 500's 9%.

In addition, he said reporting of the firm's returns and style will become more complicated as Batterymarch moves toward customized portfolios, tailored for each client's objective and producing different outcomes, tied to different benchmarks. ■

Investment Age

# Finance boutiques thrive

By Marcia Parker

**In a two-part series starting in this issue's Financing section, *Pensions & Investment Age* takes a look at the highly competitive and fast-growing field of investment banking boutiques. More than 24 firms will be profiled, only a sampling of those serving the marketplace.**

The willingness of institutional investors to bankroll leveraged buy-outs and corporate financings and restructurings is propelling fundamental changes in American corporate finance.

Most noticeable is the rise of boutique investment banking firms, which are in the throes of raising $12 billion from investors.

As a result, the already competitive investment banking market has become even more cutthroat, with the investment banking boutiques — especially those formed by defectors from huge Wall Street firms — commercial banks and insurance companies pursuing clients and investors once the sole domain of the traditional Wall Street firms.

In addition, a few institutional investors are breaking new ground by getting investment bankers, such as the Blackstone Group, to surrender to them a piece of the lucrative advisory fees the firms' earn.

And some corporate pension fund executives, normally prime targets of money-raising marketing efforts, are being bypassed because investment bankers go directly to the chief executive officer, with whom they have prior business relationships.

All investment bankers, however, are turning increasingly to a relative newcomer to these corporate finance-type investments — the Japanese. Many of

# 2 investors halt buy-out

By Carol Wiley

CHICAGO — A pension fund and a financial services company used their shareholder muscle to block the proposed buy-out of G•R•I Corp. by a management-led investor group.

The $742 million Minneapolis Employees Retirement Fund, which owns about 7% of G•R•I's outstanding shares, and Fidelity International Ltd., London, which owns about 29% of the shares, rejected the $10-per-share or $225 million offer saying management had not given the board of directors sufficient time to evaluate the bid nor a fair price for the outstanding shares. (The stock closed at $9.62 May 11.)

Robert Logan, interim chairman of the G•R•I board, said because the two institutional investors control 36% of the stock, and Illinois law requires approval from 67% of shareholders before a buy-out can proceed, the board voted unanimously to reject the proposal.

Less than a week after the buy-out was defeated, the board removed David Rubin, G•R•I's chairman and chief executive officer and leader of the buy-out effort, from the executive committee of the direct-mail marketing firm. Mr. Logan said the board decided it was "inappropriate" for the leader of the management group to serve on the committee, because any other proposals would have to be screened by the committee before being presented to the board, and "we want the committee chaired by someone not involved. It is not a rebuke."

Mr. Rubin was replaced on the executive committee by board member Jerome H. Stone, retired chairman and chief executive officer of Stone Container Corp.

Mr. Rubin, other senior executives and affiliates of the Frontenac Co. venture capital firm, had submitted a proposal May 4 to buy the company.

In a statement, Mr. Rubin said board members rejected the offer because they did not have "adequate time to evaluate it" before the offer expired, and because more than 35% of the shareholders found the $10-per-share offer "not acceptable."

G•R•I board member John Chenoweth, executive director and chief investment officer of the Minneapolis pension fund, said he objected to the proposal and voted against it because of the time limitations

## Downtown L.A. fire puts LOR in the hot seat

Leland O'Brien Rubinstein Associates Inc. and other financial services firms faced a fiery challenge May 5, when four floors of Los Angeles' First Interstate Bank Tower were gutted by a blaze. But some foresight and a bit of luck let the firms handle business as usual after the calamity. Story on Page 4.

# Another bright idea?

## GE registers money management unit

By Marlene Givant

STAMFORD, Conn. — GE Investment Management Inc. has registered as an investment adviser with the Securities and Exchange Commission, furthering General Electric Co.'s drive to be a major player in financial services.

The new firm, whose parent has produced a string of winners in such businesses as financing and leasing, joins other in-house investment units that are competing head-to-head with money managers for pension fund accounts in an already crowded market.

Although top executives of the new firm declined to comment, sources confirmed GE Investment Management, Stamford, Conn., will tap the professional and support staff of GE Investment Corp., which runs $30 billion in company assets, including GE's $20.7 billion pension trust.

In addition to the two investment management units, GE Financial Services, with assets exceeding $50 billion, also owns 80% of Kidder, Peabody & Co., General Electric Credit Corp. and Employers Reinsurance Corp., a property and casualty reinsurer.

The GE pension fund is 98% internally managed by the subsidiary. Externally managed investments include a portion of the GE pension

## LATE NEWS

### Russell set to expand overseas

TACOMA, Wash. — Michael Phillips will become head of domestic and international consulting at Frank Russell Co. next month, signaling a greater emphasis on developing the company's global operations.

In addition, Don Hardy, now head of Frank Russell International's London office, will return to Tacoma this summer to become director of international development. Replacing Mr. Hardy as managing director-Europe is Alan Baker, who joined the London office in July 1987.

The moves also foreshadow a changing role for George Russell Jr., chairman and chief executive officer. By mid-1992, when he reaches age 60, Mr. Russell plans to step back from his day-to-day responsibilities to devote himself to conceptual issues concerning the firm.

### Managers served notice on fees

SAN FRANCISCO — Robert E. Shultz, vice president-pension asset management at RJR Nabisco Inc., last week warned money managers corporate pension fund executives are sharing fee information to see whether managers are charging some clients more and others less for the same services.

"We want the same fees for the same products and services," Mr. Shultz told money managers attending the Financial Analysts Federation meeting in San Francisco.

### Proxy procedures face scrutiny

WASHINGTON — Money managers are confident their proxy-voting procedures for pension fund clients would pass muster should they be the target of the Department of Labor's enforcement crackdown, announced May 11.

Top money managers said they were complying with proxy-voting standards clarified earlier this year by the department in a letter to Avon Products, but noted this is not universal among money managers.

In a recent survey of New York Society of Security Analysts members, however, only 39% of respondents said their firms had formal proxy voting policies, and 35% said their firms' policies are written.

### California to build on victories

SACRAMENTO, Calif. — The California Public Employees' Retirement System, buoyed by strong support from Gillette Co., USAir Group, Great Northern Nekoosa Corp. and Consolidated Freightways shareholders for the fund's non-binding anti-greenmail and anti-poison pill proxy resolutions, plans to contact the companies and urge them to take the next step, possibly eliminating the takeover defenses or putting them to a shareholder vote.

At Gillette's recent annual meeting, stockholders for the first time approved an anti-greenmail resolution calling on companies to stop paying premiums to raiders.

At USAir, the fund's anti-poison pill resolution was not approved because of abstentions; but among shareholders who voted, more favored the proposal than opposed it. At Great Northern and Consolidated Freightways, the same anti-poison pill resolutions were clearly defeated, but had significant support.

### Company creates pension post

STAMFORD, Conn. — T. Britton Harris has been named to the newly created post of director of pension and thrift investments at Combustion Engineering Inc., Stamford.

Mr. Harris worked for seven years at Texas Utilities Inc., Dallas, where he most recently was senior financial analyst and was involved in overseeing the company's $1.2 billion in employee benefit assets. His duties will be assumed by John M. Casey, principal financial analyst.

At Combustion Engineering, Mr. Harris will be responsible for the money managers, asset allocation and investment policy of the company's $498 million fund. The duties had been handled by an assistant treasurer.

### International directory in works

The deadline has passed for submission of questionnaires for *Pensions & Investment Age*'s annual directory of the 50 largest international/global money managers.

The international directory will be published in the June 27 issue.

If you have any questions or have not returned your questionnaire, please contact Christine Philip, directory coordinator, *Pensions & Investment Age*, 740 N. Rush St., Chicago, Ill. 60611-2590.

You may call Ms. Philip at (312) 649-5217.

# Arbitrage halt splits investors

By Trudy Ring and Curtis Vosti

The decision by five major Wall Street brokerage houses to stop stock index arbitrage trades for their own accounts did not gain universal praise from institutional investors.

Some investors applauded the move, saying such trades increase market volatility and undermine investor confidence, particularly because of the possibility brokers could be "front running" — trading for their own accounts in anticipation of customer orders.

But others, including money managers that practice index arbitrage for clients, contended such trades actually decrease volatility, a position also taken by the Brady Commission.

The arbitrage managers also said the brokers' exit will add to opportunities to make profitable arbitrage trades for clients.

The five are Salomon Brothers Inc., Morgan Stanley & Co., PaineWebber Inc., Kidder, Peabody & Co. and Bear, Stearns & Co. Their moves leave no major Wall Street brokers involved in the practice; others, including Shearson Lehman Hutton Inc., Drexel Burnham Lambert Inc. and Goldman, Sachs & Co., made similar decisions several months ago.

"I think it's the right thing to do," said Edward T. Tokar Jr., vice president-investments at Allied-Signal Inc., Morristown, N.J. "As investors, we didn't see how (such trades) helped us in any way." He said he believes these trades do move the market and make trading more difficult for investors getting in ahead of or behind them.

"I think it's got to be a big positive," said William F. Quinn, president of AMR Investment Services, Fort Worth, Texas, which oversees American Airlines' pension fund. These trades add to market volatility and also lead to suspicions of front running, he said. "The fact that you can eliminate both of those aspects is probably good."

Other investors, however, contend index arbitrage — which takes advantage of price discrepancies between the stock and futures markets — alleviates volatility and balance the markets.

"Arbitrage is not in theory or in practice a destabilizing factor in the markets," said Tom Allen, president of Advanced Investment Management Inc., Pittsburgh, which does some arbitrage as well as portfolio insurance and straight equity management. "Less arbitrage will increase volatility, not reduce it."

Mr. Allen and other arbitrage practitioners said they now might have more opportunities to make profitable arbitrage trades, because there will be greater spreads between stocks and futures and be-

# Sharpe to run assets

## Firm focuses on allocation

By Mike Clowes

LOS ALTOS, Calif. — William F. Sharpe, the developer of the Capital Asset Pricing Model, on which the concepts of beta and alpha used in investment performance measurement are based, is entering the money management business with an asset allocation product.

Mr. Sharpe, who is also Timken Professor of Finance at Stanford University Graduate School of Business, will offer "integrated asset allocation," so-called because it integrates strategic, tactical and dynamic asset allocation.

The new investment management product is based on research Mr. Sharpe has carried out through Sharpe-Russell Research, a company started in early 1986 and funded by the Frank Russell Co. and eight of its clients, including General Motors Corp., IBM Corp., American Telephone & Telegraph Co., United Technologies Corp. and the Washington State Investment Board.

*Continued on page 34*

Lawrence G. Tint, left, will team up with William F. Sharpe.

# Citicorp boosts USF&G

By Joel Chernoff

USF&G Corp.'s $102.5 million purchase of Citicorp Investment Management will nearly triple the insurance company's presence in money management, but investment management still will be a small piece of its overall business.

The acquisition will increase the amount of assets under management to $27.5 billion from the $10 billion being managed by other USF&G subsidiaries. USF&G also owns pieces of money managers with more than $1 billion total under management.

But Baltimore-based USF&G's main business still is in the property/casualty area. Efforts to build its life insurance business and, more recently, fee-based financial services are an attempt to smooth earnings from the cyclical property/casualty area, which is headed into a downward swing.

While the purchase might lay the groundwork for the future, it "probably will not be enough to change USF&G's image," said Herb Goodfriend, first vice president at Prudential-Bache Securities Inc., New York.

Marvin Shulman, senior analyst at Moody's Investors Service Inc., New York, agreed the purchase "may give the company a basis of expanding in that area."

In addition, USF&G has been rumored to be a takeover target for about a year and the purchase could, in part, "ward off unwanted suitors," Mr. Goodfriend said.

All told, the company has invested $200 million into the financial services business during the past three years, and expects that amount to double during the next five years. The objective is to earn a minimum return of 15% by 1992, with a target of 20%, said James M. Raley Jr., president of USF&G Financial Services Corp.

Last year, financial services provided $40 million in revenue to USF&G, while losing an undisclosed amount. A small profit is

PIPER

# Convertibles score high in quarter

**By Curtis Vosti**

Connecticut Mutual Life, Hartford, posted the top return of a pooled fixed-income fund in the quarterly Pensions & Investments' Performance Evaluation Reports.

PIPER measures the performance of 299 commingled fixed-income funds of banks and insurance companies.

For 1988's first quarter, Connecticut Mutual's CM Dimension fund returned 13.2%. For the year ended March 31, the fund returned 7.5%, good enough to place in the top 10%.

The PIPER median fund returned 3.6% for the quarter and 4.8% for the year; the Shearson Lehman Government/Corporate bond index returned 3.6% and 4.4% for the respective periods.

The Connecticut Mutual fund is managed by David Solomon Asset Management, New York, and features convertible and high-yield securities, according to Brian Walters, vice president for Connecticut Mutual Asset Advisors, Weathersfield, Conn., the insurer's asset management division.

"With such a specialized fund, there are very few players good at it and Solomon's the best," Mr. Walters said.

He said in the first quarter, the fund moved more toward convertibles than debentures even though convertibles "took a hit" at the end of 1987.

At the quarter, the fund's chief asset mix was 30% in debentures, 30% in convertibles and 18% in convertible preferreds.

"The whole idea was lower volatility, significantly less volatility than an equity fund," he said.

Los Angeles-based Trust Co. of the West placed two funds in the top five for the first quarter: a convertible value bond that finished second with a return of 10.3%; and a "convertible strategy" that finished fifth at 7.9%.

**Fixed-income funds**
**(periods ended March 31, 1988)**

| | 1st qtr. | 1 yr. | 3 yr. | 5 yr. | 10 yr. |
|---|---|---|---|---|---|
| Highest return | 13.2% | 10.3% | 20 % | 16 % | 13.4% |
| First quartile | 4 | 5.8 | 13.8 | 12.3 | 11 |
| Median | 3.6 | 4.8 | 12.6 | 11.6 | 10.2 |
| Third quartile | 3.1 | 3.6 | 11.2 | 10.8 | 9.7 |
| Lowest return | 1.2 | −4 | 2.5 | 8.2 | 6.3 |
| Shearson Lehman | 3.6 | 4.4 | 13.3 | 12.3 | 10.7 |

The strong quarterly performance offset a slow trailing 12 months for TCW's top funds.

Both funds finished at the bottom of the universe for the year ended March 31: the convertible value fund at −2.99% and the convertible strategy barely ahead of it at −2.97%.

The reason: "Brilliant management," Thomas Larkin, managing director said, only half-joking.

"They did what they were suppose to do," Mr. Larkin said of the two funds. "Convertibles were very cheap, we're well positioned for a recovery."

The funds use a true value-type strategy, Mr. Larkin said, and also recently developed an orientation toward cyclical companies, he said, which did very well in 1988's first quarter.

The firm's convertible strategy, he said uses sector rotations, overweighted in cyclicals.

Beverly Trust Co., a subsidiary of Beverly Bancorporation, Chicago, finished third for the quarter with a return of 9.41%. For the year ended March 31, the fund posted a 7.73% return, placing it firmly in the top decile.

Ron Stajkowski, Beverly Trust's president, said all holdings are corporate securities. He said the firm acts on a generated interest rate forecast, but added, "I'm really not sure where interest rates are going."

"Our philosophy is to buy a lot of high-coupon corporate securities," Mr. Stajkowski said. The majority of them have calls in five to seven years. He said the bank looks for short calls with high coupons.

New York Life's convertible securities fund finished fourth for the quarter with an 8.8% return from its convertible securities fund.

For the 12 months, the top performer was Wilmington Trust Co.'s bond fund with a 10.3% return, although it fell to the ninth decile in 1988's first quarter, with a 2.64% return.

The top showing pleased Richard Hobman, vice president for fixed income.

The fund uses quantitative analysis to time the swings in the five-year performance of Treasury notes, Mr. Hobman said, stressing the bank doesn't forecast interest rates.

"We're either 100% in the note or 100% out of the market in cash equivalents," he said.

He said the timing correctly caught two major downswings in the year: the firm was out of the market at the end of March and the end of August. The fund then purchased notes just after the Oct. 19 stock market crash and, most recently, has been out of the market since March 8.

The firm's quantitative system

PIPER

# Stressing value pays

## Strategy takes top honors in short term

By Trudy Ring

Value-oriented pooled equity funds did well in the quarter and longer periods ended March 31, but a growth-oriented fund took the top long-term rankings in Pensions & Investments' Performance Evaluation Report.

PIPER ranks 322 pooled stock funds offered by banks and insurance companies. The median fund beat the Standard & Poor's 500 stock index in the quarter and year ended March 31, but not in longer periods.

The median fund returned 6.2% for the quarter, compared with the S&P 500's return of 5.7%. For the year, the median was −7.7% and the index −8.4%.

For the three years ended March 31, the median fund's compound annual return was 15.8%, while the S&P 500's was 16.8%. For the five years, the median was 13.5% and the S&P 15.6%; for the 10 years, the median was 15.8% and the index 16.6%.

First Fidelity Bank, Newark, N.J., topped the quarter with 19.9% and the year with 17.4%. It was fifth for the three-year period with 23.1%, third for five years with 20.3% and third for 10 years with 20.8%.

First Fidelity uses a value-oriented strategy to select small-capitalization stocks for its $50 million fund. The bank looks at six balance sheet ratios and six qualitative factors, the equivalent of what a corporation might do to select an acquisition candidate, said Gerald J. Reilly, group vice president.

"We had a fair amount of luck in identifying companies that were bid for," he said. Some were **George Banta Co. Inc., Koppers Co. Inc., National Intergroup Inc.** and **CertainTeed Corp.**

Dallas-based First Republic-Bank's diversified equity fund was third for the quarter with 17.4%, and in the top 10% for every period. The fund's return for one year was 0.6%; three years, 22.5%; five years, when it ranked second among all funds, 20.6%; and 10 years, 18.9%.

The $113 million fund's managers divide the S&P 500 stocks into more than 50 industry categories and usually buy the stock with the lowest price-earnings ratio in each, said Chris Najork, senior vice president of First Republic-Bank Asset Management Co. Texas, the bank's investment management subsidiary.

In the quarter, "75% of the stocks we had in the portfolio outperformed the market," he said. These included **Brunswick Corp., Lockheed Corp.** and **Brown-Forman Inc.**

First National Bank of Chicago was second for the year with 14.3%, and in the top 20% for the three- and five-year periods with 19.3% and 16.6% respectively. It was in the top 30% for the quarter, still beating the index with 8.5%, and just below the index for 10 years, with 16.5%. The bank overhauled its investment strategy eight years ago.

The equity fund is value-oriented, using a proprietary model that estimates companies' earning power and ability to generate projects for future growth, said Jeffrey Diermeier, managing director-common stock division at First Chicago Investment Advisors, which manages the fund. It also will go into cash, or sell stock index futures to create a cash equivalent position, when the stock market is high. The fund was hedged to create a 50% position in cash equivalents going into the Oct. 19 crash, and was a heavy buyer of stocks and futures when they became cheap Oct. 19 and 20, Mr. Diermeier said.

Hedging helped the fund beat the market in the 12-month period, he said. The hedged position, although down to 20% Jan. 1, held back performance in the first quarter's rising market, he added. The $460 million fund's holdings include **MCI Communications Corp., Deere & Co., SmithKline Beckman Corp.** and **Citicorp.**

Funds at State Bank and Trust Co., Defiance, Ohio, and Bank One Richmond, Richmond, Ind., run by the same manager, did well in the quarter, one-year and three-year periods; they were too new for the others.

The State Bank fund was second in the quarter with 18.2%; Bank One Richmond was fifth with 15.5%. For the year, both slipped slightly but remained in the top 10%, Bank One Richmond with 1.3% and State Bank with a −0.5%. State Bank was second and Bank One Richmond third in the three-year period with returns of 28.2% and 28% respectively.

James Investment Research Inc., Alpha, Ohio, manages both funds. The firm uses computer modeling and personal research to find stocks that are outperforming their peers, are neglected by Wall Street and institutions and have strong fundamentals, said Frank James, president.

Holdings in the $7 million State Bank fund in the past quarter included **Calmat Co., Crane Co., Lukens Inc., J.P. Stevens & Co.** and **NCR Corp.** Stocks in the $8 million Bank One Richmond fund included **A.G. Edwards Inc.** and **The Toro Co.** The funds' holdings and returns vary because of the timing of their cash flows and the stock buys available then, Mr. James said.

United Bank of Denver was third for the year with a 10.6% re-

*The Creation of Extraordinary Value is the Result of Extraordinary Vision*

- - the Rembrandt Philosophy

*A* profitable investment portfolio, like the great artist's work on canvas, is rarely the consequence of whim or chance. At Tomlin Properties, we have that extraordinary vision to create extraordinary value with exceptional returns through 17 *years of investing in Predevelopment Land.*

***"Heaven forbid that I should ever see things the way they do!"***

Rembrandt worked to see what few around him saw. And he created masterpieces. At Tomlin Properties, we've cultivated an approach that looks beyond what "conventional wisdom" might suggest. While some view land as risky business, we've created an approach that proves this is a bit short sighted. With over eighty investments in predevelopment land, *we've proven that predevelopment land is a prudent investment.*

***"Secret . . . fiddlesticks! I start with a formula, and work to prove that it is correct."***

Don't misunderstand. When we speak of "vision" we're not referring to some nebulous "feeling" we get about a parcel of land. The Tomlin formula is based on *detailed research, intensive management* and *hard work.* That experience has been the cornerstone of our success. With a keen eye on the nation's prime growth markets, we begin with the parameters of a cautious investment clearly in focus: location of the land, and timing of the acquisition. Assessed correctly, these are the factors which *minimize risk* and maximize return. Additionally, we only invest in those cities where we have *on-site local management* offices. *Dallas, Los Angeles, Houston, Atlanta, Phoenix and Washington,* D.C. Local Tomlin executives who know the market and who know how to maximize each property's potential. Time and time again our clients have enjoyed the fruits of this approach.

***"Perhaps 400 years from now, if any of my pictures are left, they will say, 'this fellow was going in the right direction'."***

Rembrandt knew that time was the ultimate test of the value of his art. Fortunately we're not looking at a 400 year waiting period. Instead, our average investment period is much shorter than you might expect. History tells us that land has been profitable for the patient sophisticated investor. And while not all land is suitable for capital growth investments, we live in a world where predevelopment land in ideal locations is a diminishing resource. Its appreciation potential is great, while the measured risks are comparable to the most traditionally conservative portfolio components. And Tomlin Investments in predevelopment land continually outperform other forms of real estate, stocks, bonds, and treasury bills. *Our clients agree — we've passed the test of time. And the result is extraordinary value.*

*Continued from page 29*

turn. The bank made the top 10% for the 10-year period, with a compound annual 19.2%, and the top 20% for three years, with 18.6%, and the quarter, with 10%. Due to poor returns in the mid-1980s, the bank's equity fund lagged the S&P 500 for the five-year period with 14.6%.

The $25 million fund buys severely depressed, out-of-favor stocks, said W. Lon Schreur, president of United Capital Management. Recently, the fund has been heavily invested in capital goods stocks. These included **Bethlehem Steel Corp., Kaiser Aluminum & Chemical Corp., Caterpillar Inc., Clark Equipment Co.** and **Phelps Dodge Corp.**

Sun Banks Inc., Orlando, Fla., topped the three-, five- and 10-year returns for the second consecutive quarter. The bank's equity fund returned 29.7% for the three years, 27% for the five years and 23.3% for the 10 years. For the year, it was in the top 20% with −1.6%; for the quarter, the fund dropped in the rankings but still beat the index and median fund with a 7.3% return.

The $340 million fund buys large-capitalization stocks with above-average growth and makes major sector bets. The fact large stocks lagged small ones in the quarter hurt performance, as did poor returns in health care and technology, said Anthony J. Gray, president of Sun Banks Investment Management Group.

Still, the fund's long-term stock-picking record is good. Major holdings include **CPC International Inc., The Dow Chemical Co., General Electric Co., Johnson & Johnson, Apple Computer Inc.** and **Digital Equipment Corp.** ■

# Bonds

*Continued from page 28*

uses the closing prices of five-year notes, Mr. Hobman said, then applies a proprietary technical signal system to forecast the swings.

Delaware Trust Co.'s employee benefit income fund has been a top performer for the long term, finishing second in the three-year period with a compound annualized return of 18.5% and first for the five years, with a compound annualized 16%.

The PIPER median returned 12.6% for the three-year period and 11.6% for the five years. The Shearson Lehman Government/Corporate index posted 13.3% and 12.3% for the same time periods.

"We are always fully invested," said David Baldt, fixed-income manager and senior vice president for the Wilmington-based trust company. "We do not attempt to do any interest rate forecasting."

The employee benefit/profit sharing pension fund was no slouch in the shorter periods either, finishing in the top 10% for the quarter at 5.33% and beating the median fund for the 12 months with a 5.44% return.

"We invest in high-grade bonds — well over 80% are AAA — with average maturity range of five to 12 years," Mr. Baldt said.

Now, the fund is principally invested in mortgage-backed securities and is actively traded.

The top ranking 10-year performance was turned in by United of Denver's bond fund, which is run by the bank's investment counseling group, United Capital Management.

The fund returned a compound-annualized 13.4% over the 10-year period, compared with the PIPER median of 10.22% and the Shearson Lehman Government/Corporate return of 10.66%. ■

# Asset growth slows

## Top 100 managers pass $2 trillion mark despite Oct. 19

By Carol Wiley

The strong annual increases in assets managed by the nation's largest 100 money managers ended in 1987, when more than nine months' investment return was wiped out by Black Monday.

Tax-exempt assets recorded the most dramatic slowdown, growing 11.7% — to $1.158 trillion — in the year ended Jan. 1, vs. 23% in 1986.

Total assets of the Top 100 grew 13.4% last year, compared with 22.4% in 1986. Despite the slower growth, *Pensions & Investment Age*'s 100 largest money managers did pass the $2 trillion milestone: their total assets reached $2.054 trillion as of Jan. 1, compared with $1.811 trillion a year earlier.

Part of the increase is due to several money management firms making their first appearance in *P&I Age*'s annual survey. Assets of the new firms created a net addition of approximately $12 billion, or 20%, from 1987's survey.

But about 6% to 9% of the increase can be attributed to the 3% to 4% the average stock/bond mix would have earned last year and the 3% to 5% institutional investors probably contributed, according to Corrine Holden, director of manager research at Ennis, Knupp & Associates, Chicago.

Ms. Holden cited other reasons for the growth: "There's no reason to think that passive managers haven't continued to grow," she said. "Clients also have increased their allocations to real estate as a hedge."

Many of the larger firms have created pooled fund vehicles with smaller minimums for smaller plans, which also has resulted in more money for the large money managers, she said.

Among other highlights of *P&I Age*'s 15th annual directory:

- The tax-exempt asset mix of the Top 200 investment management firms, as well as all the managers, showed an exodus from equities.

Among the Top 200, the move was to real estate and alternative investments; overall, it was into bonds, cash and mortgage-backed securities.

Among the Top 200, the average asset mix Jan. 1 was 45% stocks, down from 48% a year earlier; 30% bonds, the same as the previous year; 10% cash, also holding steady; 7% in equity real estate, up from 6%; 2% in mortgage-backed securities, the same as the previous year; 2% in mortgages, up from 1%; and 4% other, up from 3%.

The average asset mix for all managers profiled Jan. 1 was 47% stocks, down from 54%; 26% bonds, up from 23%; 14% cash, up from 10%; 6% equity real estate, the same as the previous year; 1% mortgages and 2% mortgage-backed securities, both steady from last year; and 4% other.

- The largest 200 managers experienced an increase in total assets of 13.2%, to $2.292 trillion from $2.024 trillion as of Jan. 1, 1987; their tax-exempt assets grew 10.9%, to $1.412 trillion from $1.273 trillion.
- Total assets under management by 971 investment advisers participating in the survey were $3.035 trillion, up from $2.685 trillion for the 930 managers profiled last year. Canadian managers were excluded from both totals. Tax-exempt assets of the managers reached $1.687 trillion, from $1.516 trillion a year earlier.
- Insurance companies and their subsidiaries recaptured the lead in tax-exempt market share among the 100 largest this year, beating the banks and their subsidiaries 38% vs. 35%. Among the 200 largest managers, however, banks retained the lead, holding 35% to the insurers' 33%.
- The 25 largest managers of bond index funds experienced a whopping 83.8% increase in assets. (All rankings of the 25 largest managers are by tax-exempt assets under management in that category.)
- The 25 largest real estate managers also increased assets significantly — 44.5%.
- International investments went down with the international equity markets, however, and the 25 largest international managers showed a $309 million decrease in assets.

The market's volatility frightened some investors into seriously hedging their risk, which helped insurance companies — big players in the guaranteed investment contract market — increase their share of the market.

And defined contribution plans are increasing their use of GICs, further boosting business for insurers.

"In spite of the fact defined benefit plans are not renewing their contracts, sales to defined contribution plans are big enough so that our total in GICs gets larger," said Dennis Donahue, assistant vice president at Aetna Life Insurance Co., Hartford, Conn.

In addition, insurance companies were less exposed to the equity market and, therefore, lost less money in the October crash.

"It's a measure of market volatility more than anything else," said Harvey Young, senior vice president at Metropolitan Life Insurance Co., New York. "Insurance companies are underexposed to equities and overexposed to fixed income.

"Insurance companies also are acquiring independent managers (the past few years) and are competing on more equal footing with bank trust departments and money managers."

The 83.8% increase in bond index funds was the second superlative year in a row for that investment area: between Jan. 1,

# Statistics gathered from questionnaires

The data contained in the story, profiles, charts and tables in this special issue were developed by *Pensions & Investment Age* from answers to questionnaires.

Detailed questionnaires were sent to client contacts or chief investment officers at more than 2,200 banks, trust companies, insurance companies and independent investment advisers in the United States and abroad. Real estate and international/global managers are included in this issue, although *P&I Age* publishes separate, detailed directories on those subjects.

A team of editorial staff members in Chicago worked on this issue — the 15th annual directory of investment advisers — for almost five months.

All quantifiable answers to the questionnaires were entered into a spreadsheet program from which the charts, tables and other statistics were compiled.

All information, except where noted, is as of Jan. 1, 1988.

As in previous years, all managers were asked to provide total and tax-exempt institutional assets under management; the tax-exempt institutional asset mix; kinds, numbers and names of tax-exempt institutional clients; areas of investment capabilities; investment approaches to stocks, bonds and real estate, where appropriate; names and titles of chief investment officer and client contact; the parent company; and dollar amounts invested in categories such as equity real estate, mortgage-backed securities, mortgages, foreign investments, indexed funds and dedicated/immunized bond portfolios.

Banks and trust companies also were asked to break out the tax-exempt assets into commingled and separate accounts, with numbers of clients in each category.

Insurance companies were asked to give detailed information about the separate and general accounts.

## Abbott Capital Management

The Babson Building, 1 Market St., P.O. Box 81107, Wellesley Hills, Mass. 02181; (617) 235-1088

| | |
|---|---|
| Total assets managed | $312,000,000 |
| Tax-exempt assets managed | $312,000,000 |
| Minimum separate account | $10,000,000 |
| Tax-exempt clients | 9 |
| Types of accounts managed | CEG |
| No. of portfolio managers | 3 |
| Size of research staff | 3 |

Abbott Capital Management L.P. is a venture capital funds manager that uses a qualitative approach.

The firm uses in-depth analyses of the management teams to manage a 10- to 12-year venture capital partnership.

All assets Jan. 1 were in venture capital funds.

Raymond L. Held, general partner, is chief investment officer; Stanley E. Pratt, general partner, is client contact.

## ABD International Management Corp.

10 E. 53rd St., New York, N.Y. 10022; (212) 319-5020

| | |
|---|---|
| Total assets managed | $673,000,000 |
| Tax-exempt assets managed | $539,000,000 |
| International assets managed | $539,000,000 |
| Minimum separate account | $15,000,000 |
| Tax-exempt clients | 7 |
| Types of accounts managed | CG |
| No. of portfolio managers | 9 |
| Size of research staff | 79 |

ABD International Management Corp. is an international manager offering equity, fixed-income and balanced capabilities.

For equities, it takes an active approach to currencies and stock selection based on industry rotation worldwide and within markets. The currency decision is considered separately from asset allocation and security selection.

Its fixed-income approach uses interest rate anticipation, currency considerations, technical analysis and macroeconomic analysis regarding currency implications.

The asset mix Jan. 1 was 73% stocks, 12% bonds and 15% cash.

The parent company is Dresdner Bank AG.

Clients include GM, AT&T and Burlington Northern.

Wilhelm Heischmann is the chief investment officer; William Rutherford, president, is client contact.

## Abel/Noser Corp.

90 Broad St., 23rd Floor, New York, N.Y. 10004; (212) 344-2610

| | |
|---|---|
| Total assets managed | $200,000,000 |
| Tax-exempt assets managed | $200,000,000 |
| Minimum separate account | $5,000,000 |
| Tax-exempt clients | 10 |
| Types of accounts managed | C |
| No. of portfolio managers | 4 |
| Size of research staff | 4 |

Abel/Noser Corp. is an equity manager. The firm is also a manager of managers, responsible for an additional $30 million in externally managed funds.

Its equity approach is quantitative, emphasizing low price-earnings ratios. It invests in undervalued stocks with high earnings potential that recently reported earnings surprises using a ranking system with manual override when significant adverse information is published.

Eugene A. Noser Jr., president, is chief investment officer; Richard T. McSherry, executive vice president, is the client contact.

## Acquest Capital Management Inc.

300 E. Long Lake Road Suite 355; Bloomfield Hills, Mich. 48013; (313) 645-5130

| | |
|---|---|
| Total assets managed | $146,000,000 |
| Tax-exempt assets managed | $102,000,000 |
| Real estate assets managed | $102,000,000 |
| Minimum separate account | $2,000,000 |
| Tax-exempt clients | 6 |
| Types of accounts managed | CEJ |
| No. of portfolio managers | 3 |
| Size of research staff | 4 |

Acquest Capital Management Inc. is a real estate manager emphasizing product knowledge, market research, sophisticated financial analysis, development skills, management control and integrity.

Clients include Dow Chemical, Operating Engineers, Carpenters and Reinforced Ironworkers.

David G. Ong, president, is chief investment officer; Delores M. Hoenes, asset manager, is the client contact.

## The Adams Express Co.

7 St. Paul St., Baltimore, Md. 21202; (301) 752-5900

| | |
|---|---|
| Total assets managed | $427,000,000 |
| Tax-exempt assets managed | $3,000,000 |
| Minimum separate account | $5,000,000 |
| Types of accounts managed | CEF |
| No. of portfolio managers | 4 |
| Size of research staff | 6 |

The Adams Express Co. is a defensively oriented equity manager, emphasizing quality growth at reasonable prices, based on Graham & Dodd principles. Its investment approach is risk-averse, with strong commitment to in-house research.

The firm follows 250 stocks closely and 500 generally; all of the research is generated internally.

W.D. MacCallan, chairman and chief executive officer, is chief investment officer. Monica C. Loh, vice president-investment advisory services, is client contact.

## Advanced Investment Management

2 Oliver Plaza Suite 2020, Pittsburgh, Pa. 15222; (412) 762-6369

| | |
|---|---|
| Total assets managed | $650,000,000 |
| Tax-exempt assets managed | $610,000,000 |
| Index funds managed | $170,000,000 |
| Minimum separate account | $5,000,000 |
| Tax-exempt clients | 44 |
| Types of accounts managed | CEFJG |
| No. of portfolio managers | 5 |

Advanced Investment Management is an equity, fixed-income and balanced manager.

Its equity approach is based on quantitative strategies, with particular expertise in indexing and hedging to meet client risk tolerances. Its fixed-income approach is passive and hedged. Options, stock index futures and fixed-income futures are used.

It offers portfolio insurance, covering $300 million in tax-exempt assets.

The asset mix Jan. 1 was 80% stocks, 10% bonds, 5% cash and 5% derivative securities. As of the same date, $150 million was in equity index and $20 million in bond index funds.

The firm follows 300 stocks closely.

The parent is PNC Financial Corp.

Clients include Westinghouse Electric, USAir and Allegheny Ludlum.

J. Thomas Allen, president, is chief investment officer; Paul A. Blake III, marketing director, is client contact.

## Aegis Asset Management

1000 Quail St. Suite 220, Newport Beach, Calif. 92660; (714) 752-2120

| | |

| Size of research staff | 3 |

Aetna Capital Management Ltd., a Canadian firm, is an equity, fixed-income, balanced, real estate, U.S. equity and short-term money market manager.

Its equity approach emphasizes individual stock selection based on fundamental value considerations. About 20% to 25% of the decision is based on the economic and market environment.

Its fixed-income approach is to select the proper sector structure and term exposure within acceptable risk/reward limitations. They are market timers only to the extent of a 5% to 25% cash equivalent range.

For real estate, it offers closed-end funds for direct ownership of up to 75% of a property.

It follows 30 to 40 stocks closely and 100, generally; 20% of research is generated internally.

The parent company is Aetna Canada.

Michael A. Sandell, president, is chief investment officer and client contact.

Aetna Life Insurance Co. is an equity, fixed-income, balanced, real estate, international and GIC manager.

Its equity approach emphasizes companies with positive future earnings momentum and superior relative p/e ratio targets. Passive management is offered.

Its active fixed-income approach uses sector analysis and is designed to control market risk while emphasizing cash flow and value to maximize total returns. Cash is used to govern duration within a prescribed band and generally is less than 25% of a portfolio. Options and stock index futures are used.

Its real estate approach includes strategic analysis, acquisition, aggressive property management and a disciplined sales program.

The separate account asset mix Jan. 1 was 34% stocks, 6% bonds, 21% cash, 24% equity real estate, 13% mortgages and 2% international; $122 million was in equity index funds and $25 million in bond indexed funds.

The parent company is Aetna Life and Casualty.

Philip R. Roberts, senior vice president, is chief investment officer; T. Jerald Moore, vice president, is client contact.

The data above include the assets of the following subsidiary.

● AETNA MULTINATIONAL ASSET MANAGEMENT LTD., with $159 million in tax-exempt assets, is an international manager whose equity approach emphasizes top-down country allocation with bottom-up stock selection to build a diversified portfolio, subject to predetermined risk parameters. Currency management is used to reduce volatility.

Philip R. Roberts, senior vice president, is chief investment officer; Thomas V. Scanlon, director, is client contact.

|---|---|
| Total assets managed | $450,000,000 |
| Tax-exempt assets managed | $0 |
| Minimum separate account | $3,000,000 |
| No. of portfolio managers | 3 |

AgriVest is a real estate manager that makes conservative, value-oriented investments, both equity and debt, in agricultural real estate in the major U.S. agricultural regions.

George E. Schwab, president, is chief investment officer; James B. McCandless, executive vice president, is client contact.

## AIG Global Investors

1 World Financial Center 19th Floor, New York, N.Y. 10281; (212) 266-0400

| | |
|---|---|
| Total assets managed | $8,000,000,000 |
| Tax-exempt assets managed | $0 |
| Minimum separate account | $10,000,000 |
| No. of portfolio managers | 9 |

AIG Global Investors is an equity, fixed-income, balanced, international and global balanced manager.

Its equity approach is top-down/bottom-up, with an emphasis on growth stocks. Its objective is above-average returns through asset allocation, diversification and selection.

Its fixed-income approach focuses on interest rate anticipation and forecasting currency movements. The firm looks for cyclical moves in interest rates over an economic cycle with a short-term trading viewpoint.

The parent company is American International Group.

Richard Hoffman, president, is chief investment officer and client contact.

## A I M Capital Management

11 Greenway Plaza Suite 1919, Houston, Texas 77046; (713) 626-1919

| | |
|---|---|
| Total assets managed | $9,720,000,000 |
| Tax-exempt assets managed | $131,000,000 |
| Minimum separate account | $5,000,000 |
| Tax-exempt clients | 7 |
| Types of accounts managed | CF |
| No. of portfolio managers | 4 |
| Size of research staff | 12 |

A I M Capital Management is an equity, fixed-income and balanced manager.

Its equity approach uses growth and emerging growth stocks that are monitored on the basis of earnings momentum and relative strength in the marketplace. Options are used.

In fixed income, the firm creates overdiversified portfolios loaded with lower-quality issues to capitalize on yield premiums and buys convertibles, seeking a high level of current income exceeding yields in the equity market.

All assets were in bonds Jan. 1.

Charles T. Bauer is chief investment officer; Gary T. Crum is client contact.

## Albion Management Group

Alta Lodge, Alta, Utah 84092; (801) 742-3500

| | |
|---|---|
| Total assets managed | $12,000,000 |
| Tax-exempt assets managed | $3,000,000 |
| Minimum separate account | $250,000 |
| Tax-exempt clients | 33 |
| Types of accounts managed | C |
| No. of portfolio managers | 2 |
| Size of research staff | 1 |

Albion Management Group is an equity and balanced manager.

Its equity approach emphasizes growth stock, emerging growth stock and low p/e ratios. It seeks values overlooked by other investors. It looks for companies with a market niche, growth and earnings potential in products under development, hidden assets and other special situations. Options are used.

Its fixed-income approach relies on interest rate anticipation.

W. Toby Levitt, president, is chief investment officer; Heidi Mosburg, vice president, is client contact.

## Aldrich, Eastman & Waltch

265 Franklin St., Boston, Mass. 02110; (617) 439-9000

| | |
|---|---|
| Total assets managed | $2,700,000,000 |
| Tax-exempt assets managed | $2,700,000,000 |
| Real estate assets managed | 2,700,000,000 |
| Minimum separate account | $100,000,000 |
| Tax-exempt clients | 19 |
| Types of accounts managed | CEG |

Aldrich, Eastman & Waltch Inc. is a real estate manager.

Its approach is flexible and opportunistic, reflecting property fundamentals and current market conditions. It emphasizes adding value through active management of both the property and the capital structure of the investment.

The asset mix Jan. 1 was 95% equity real estate and 5% mortgages.

Clients include AT&T, GM, Iowa and Digital Equipment.

Thomas G. Eastman, principal, is chief investment officer; Robert J. Hannan is client contact.

## Fred Alger Asset Management Inc.

595 Market St., Suite 2050, San Francisco, Calif. 94105; (415) 882-9882

| | |
|---|---|
| Total assets managed | $467,000,000 |
| Tax-exempt assets managed | $467,000,000 |
| Real estate assets managed | $44,000,000 |
| Minimum separate account | $20,000,000 |

| Types of accounts managed | CF |
| No. of portfolio managers | 10 |
| Size of research staff | 20 |

Fred Alger Management Inc. is an equity, fixed-income, balanced, convertible securities and mutual fund manager.

Its bottom-up, growth stock approach focuses on companies experiencing positive life-cycle changes or high unit volume growth.

Its fixed-income approach is based on interest rate anticipation, sector analysis and credit research, seeking to achieve consistent, above-average returns through active maturity and sector selection.

The asset mix Jan. 1 was 84.8% stocks, 8.8% bonds and 6.4% cash.

The firm follows 75 stocks closely and 150, generally; all research is generated internally.

Fred Alger & Co. Inc. is the parent.

Clients include Alaska, Burlington Northern and Capital Cities/ABC.

Fred M. Alger, president and chairman, is chief investment officer; George J. Boggio, executive vice president, is client contact.

## Alliance Capital Management Corp.

1345 Avenue of the Americas, New York, N.Y. 10105; (212) 969-1000

| | |
|---|---|
| Total assets managed | $30,132,000,000 |
| Tax-exempt assets managed | $26,984,000,000 |
| Real estate assets managed | $1,568,000,000 |
| International assets managed | $368,000,000 |
| Index funds managed | $3,939,000,000 |
| Dedicated funds managed | $237,000,000 |
| Minimum separate account | $10,000,000 |
| Tax-exempt clients | 353 |
| Types of accounts managed | CEFJG |
| No. of portfolio managers | 38 |
| Size of research staff | 18 |

Alliance Capital Management Corp. is an equity, fixed-income, balanced, international, convertible and venture capital manager.

It offers active and passive equity strategies. Its active approach uses emerging growth stocks and sector rotation to select stocks with two- to three-year relative earnings strength at an early stage and a reasonable price.

Its fixed-income approach relies heavily on sector analysis. It manages market risk by limiting duration deviations from the market. Value is added through heavy sector concentrations and opportunity trading. Passive strategies are offered. It uses options and financial futures.

The asset mix Jan. 1 was 75% stocks, 12% bonds, 4% cash, 8% mortgage-backed securities and 1% convertibles; $368 million was in foreign stocks and $3.939 billion in equity index funds.

The parent company is The Equitable Life Assurance Society of the United States.

Dave H. Williams is chief executive officer; Margaret M. Frankowski is client contact.

## Allstate Life Insurance Co.

Allstate Plaza South, Northbrook, Ill. 60062; (312) 402-5000
